*Certain prior year amounts have been reclassified to conform to current year presentation

[1]Fiscal 2021 reflects approximately $0.4 billion of certain international OTC products, primarily in China, which were reclassified from the Pharmaceutical segment to the Consumer Health segment based on operational changes

The OTC franchise sales of $6.0 billion increased 7.2% as compared to the prior year. Operational growth was primarily attributable to increased Cough/Cold/Flu, adult and pediatric incidences, price actions primarily in the U.S. and increased consumption in China due to easing of COVID-19 restrictions. Growth was partially offset by supply constraints.

The Skin Health/Beauty franchise sales of $4.4 billion declined 4.2% as compared to the prior year. The operational decline was driven by supply constraints in the U.S. partially offset by price actions and strong new product performance in the Asia Pacific and Latin America region.

The Oral Care franchise sales of $1.5 billion declined 8.5% as compared to the prior year. The operational decline was due to portfolio simplification in the U.S., competitive pressures in EMEA and China, category decline and pricing pressures in EMEA, as well as suspension of personal care sales in Russia and negative COVID-19 impacts in China.

The Baby Care franchise sales of $1.5 billion declined 6.7% as compared to the prior year. The operational decline was driven by category deceleration and competitive pressures in the U.S., suspension of personal care sales in Russia and weakness in India.

The Women's Health franchise sales of $0.9 billion declined 1.5% as compared to the prior year. Operational growth driven by lapping prior year supply constraints in EMEA, strength in India, and price actions in LATAM was partially offset by suspension of personal care sales in Russia and negative currency impacts.

The Wound Care/Other franchise sales of $0.7 billion declined 5.3% as compared to the prior year. The operational decline was driven by lapping strong prior year consumption, competitive pressure in the U.S., and decreased consumption in China.

In November 2021, the Company announced its intention to separate the Company's Consumer Health business (Kenvue as the name for the planned New Consumer Health Company), with the intention to create a new, publicly traded company by the end of the fiscal year 2023.

Pharmaceutical Segment

Pharmaceutical segment sales in 2022 were $52.6 billion, an increase of 1.7% from 2021, which included operational growth of 6.7% and a negative currency impact of 5.0%. U.S. sales were $28.6 billion, an increase of 2.3%. International sales were $24.0 billion, an increase of 1.0%, which included 11.9% operational growth and a negative currency impact of 10.9%. In 2022, acquisitions and divestitures had a net negative impact of 0.1% on the operational sales growth of the worldwide Pharmaceutical segment. Adjustments to previous sales reserve estimates were approximately $0.1 billion and $0.7 billion in fiscal years 2022 and 2021, respectively.

Major Pharmaceutical Therapeutic Area Sales*:

(Dollars in Millions)	2022	2021	Total Change	Operations Change	Currency Change

*Certain prior year amounts have been reclassified to conform to current year presentation

(1) Inclusive of PROCRIT / EPREX which was previously disclosed separately

(2) Fiscal 2021 reflects approximately $0.4 billion of certain international OTC products, primarily in China, which were reclassified from the Pharmaceutical segment to the Consumer Health segment based on operational changes

Immunology products achieved sales of $16.9 billion in 2022, representing an increase of 1.1% as compared to the prior year. Operational growth was driven by strong uptake of STELARA (ustekinumab) in Crohn's disease and Ulcerative Colitis and strength of TREMFYA (guselkumab) in Psoriasis and uptake in Psoriatic Arthritis. This was partially offset by lower sales of REMICADE (infliximab) due to biosimilar competition.

Biosimilar versions of REMICADE have been introduced in the United States and certain markets outside the United States and additional competitors continue to enter the market. Continued infliximab biosimilar competition will result in a further reduction in sales of REMICADE.

The latest expiring United States patent for STELARA (ustekinumab) will expire in September 2023. STELARA (ustekinumab) U.S. sales in fiscal 2022 were approximately $6.4 billion and the expiration of this product patent or loss of market exclusivity will result in a reduction in sales.

Infectious disease products sales were $5.4 billion in 2022, representing a decline of 6.5% as compared to the prior year. Operational growth was driven by the COVID-19 vaccine outside the U.S partially offset by lower sales of PREZISTA and PREZCOBIX/REZOLSTA (darunavir/cobicistat) due to increased competition and loss of exclusivity of PREZISTA in certain countries outside the U.S.

Neuroscience products sales were $6.9 billion, in 2022, representing a decline of 1.4% as compared to the prior year. The operational sales growth of INVEGA SUSTENNA/XEPLION (paliperidone palmitate) and INVEGA TRINZA/TREVICTA from new patient starts and persistence as well as the launch of INVEGA HAFYERA was offset by negative currency impacts and lower sales of RISPERDAL CONSTA.

Oncology products achieved sales of $16.0 billion in 2022, representing an increase of 9.9% as compared to the prior year. Contributions to operational growth were strong sales of DARZALEX (daratumumab) driven by share gains in all regions, continued strong market growth, and uptake of the subcutaneous formulation as well as the continued global launch uptake of ERLEADA (apalutamide). This was partially offset by declining sales of IMBRUVICA (ibrutinib) due to competitive pressures and market suppression and ZYTIGA due to loss of exclusivity in the European Union in the second half of 2022.

Pulmonary Hypertension products sales were $3.4 billion, a decline of 1.0% as compared to the prior year. The operational sales growth of OPSUMIT (macitentan) and UPTRAVI (selexipag) due to continued share gains and market growth was offset by COVID-19 related impacts and continued declines in Other Pulmonary Hypertension.

Cardiovascular/Metabolism/Other products sales were $3.9 billion, a decline of 5.6% as compared to the prior year. The operational decline was primarily attributable to lower sales of INVOKANA/INVOKAMET (canagliflozin) due to share erosion and PROCRIT/ EPREX (epoetin alfa) due to biosimilar competition.

The Company updated its policy so that no end customer will be permitted direct delivery of product to a location other than the billing location. The policy impacts contract pharmacy transactions involving non-grantee 340B covered entities for most of the Company’s drugs, subject to multiple exceptions. Both grantee and non-grantee covered entities can maintain certain contract pharmacy arrangements under policy exceptions. The Company has been and will continue to offer 340B discounts to covered entities on all of its covered outpatient drugs, and it believes its policy will improve its ability to identify inappropriate duplicate discounts and diversion prohibited by the 340B statute. The 340B Drug Pricing Program is a U.S. federal government program requiring drug manufacturers to provide significant discounts on covered outpatient drugs to covered entities. This policy update had discount implications which positively impacted sales to customers in 2022.

During 2022, the Company advanced its pipeline with several regulatory submissions and approvals for new drugs and additional indications for existing drugs as follows:

Product Name (Chemical Name)	Indication	US Approval	EU Approval	US Filing	EU Filing
aprocitentan	Treatment for difficult to treat hypertension			▯	
CABENUVA (rilpivirine and cabotegravir)	HIV treatment for adolescents	▯			
CARVYKTI (ciltacabtagene autoleucel)	Treatment for patients with relapsed or refractory Multiple Myeloma	▯	▯		
ERLEADA (apalutamide)	Tablet reduction			▯	▯
IMBRUVICA (ibrutinib)	Treatment for Pediatric Patients with Chronic Graft-Versus-Host Disease	▯			
	Treatment for Frontline Chronic Lymphocytic Leukemia (I + V fixed duration) (GLOW)		▯		
niraparib	Treatment of L1 Prostate cancer metastatic castration-resistant in combination with abiraterone acetate and Prednisone				▯

MedTech Segment**
The MedTech segment sales in 2022 were $27.4 billion, an increase of 1.4% from 2021, which included operational growth of 6.2% and a negative currency impact of 4.8%. U.S. sales were $13.4 billion, an increase of 5.4% as compared to the prior year. International sales were $14.1 billion, a decrease of 2.3% as compared to the prior year, which included operational growth of 6.9% and a negative currency impact of 9.2%. In 2022, the net impact of acquisitions and divestitures on the MedTech segment worldwide operational sales growth was a positive 0.1%.

Major MedTech Franchise Sales*:

(Dollars in Millions)	2022	2021	Total Change	Operations Change	Currency Change
Surgery	**$ 9,690**	**9,812**	**(1.2)%**	**3.8 %**	**(5.0) %**

Interventional Solutions	**4,300**	**3,971**	**8.3**	**13.7**	**(5.4)**
Total MedTech Sales	**$ 27,427**	**27,060**	**1.4 %**	**6.2 %**	**(4.8) %**

*Certain prior year amounts have been reclassified to conform to current year presentation
**Previously referred to as Medical Devices

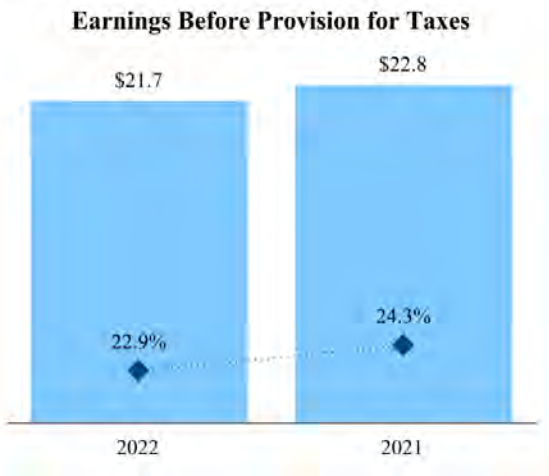
The Surgery franchise sales were $9.7 billion in 2022, representing a decline of 1.2% from 2021. The operational growth in Advanced Surgery was primarily driven by the following: Endocutter market recovery and new products partially offset by competitive pressures in the U.S.; Biosurgery market recovery and the success of new products partially offset by strong U.S. market demand in the prior year for infection prevention products; and Energy products driven by market recovery and new product penetration coupled with competitive supply challenges. The operational growth in General Surgery was primarily driven by market recovery and technology penetration.

The Orthopaedics franchise sales were $8.6 billion in 2022, which was flat to the prior year. The Orthopaedics franchise included operational sales growth of 3.7% offset by a negative currency impact of 3.7%. The operational growth in hips reflects the market recovery combined with continued strength of the portfolio including the ACTIS stem and enabling technologies – KINCISE and VELYS Hip Navigation. This growth was partially offset by impacts of volume-based procurement in China and the timing of tenders outside the U.S. The operational growth in knees was primarily driven by procedure recovery, strength of the ATTUNE portfolio and pull through related to the VELYS Robotic assisted solution. This growth was partially offset by impacts of volume-based procurement in China and timing of tenders outside the U.S. The operational growth in Trauma was driven by global market recovery and uptake of new products. The operational growth in Spine, Sports & Other was primarily driven by procedure recovery and new product introductions. This growth was partially offset by competitive pressures in Spine and impacts of volume-based procurement in China.

The Vision franchise achieved sales of $4.8 billion in 2022, representing an increase of 3.4% from 2021. The Contact Lenses/Other operational growth was due to market recovery, price actions, commercial execution and benefits from new products. Surgical Vision operational growth was primarily due to market recovery and the success of new products and was partially offset by a higher prior year U.S. Refractory market.

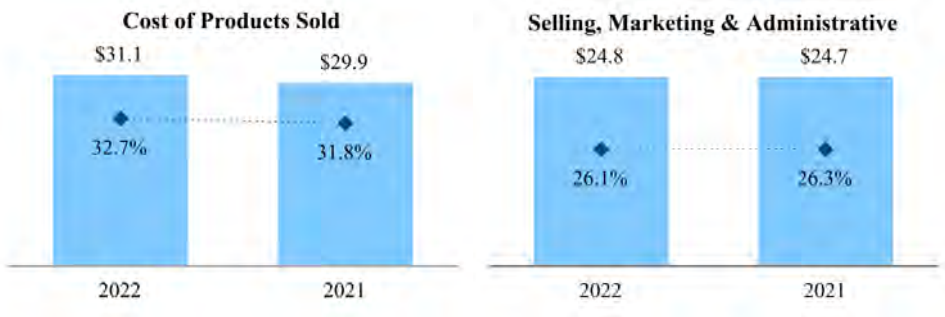
The Interventional Solutions franchise achieved sales of $4.3 billion in 2022, representing an increase of 8.3% from 2021. Operational growth was driven by market recovery and success of new products and commercial strategies. Interventional solutions also includes sales from Abiomed, Inc. (Abiomed) which were reflected as of December 22, 2022.

Analysis of Consolidated Earnings Before Provision for Taxes on Income
Consolidated earnings before provision for taxes on income was $21.7 billion and $22.8 billion for the years 2022 and 2021, respectively. As a percent to sales, consolidated earnings before provision for taxes on income was 22.9% and 24.3%, in 2022 and 2021, respectively.



(Dollars in billions. Percentages in chart are as a percent to total sales)

Cost of Products Sold and Selling, Marketing and Administrative Expenses:



(Dollars in billions. Percentages in chart are as a percent to total sales)

Cost of products sold increased as a percent to sales driven by:
- One-time COVID-19 vaccine manufacturing exit related costs
- Currency impacts in the Pharmaceutical segment
- Commodity inflation in the MedTech and Consumer Health segments

partially offset by
- Supply chain benefits in the Consumer Health segment

The intangible asset amortization expense included in cost of products sold was $4.3 billion and $4.7 billion for the fiscal years 2022 and 2021, respectively.

Selling, Marketing and Administrative Expenses decreased as a percent to sales driven by:
- Reduction of brand marketing expenses in the Pharmaceutical and Consumer Health businesses

Research and Development Expense:
Research and development expense by segment of business was as follows:

	2022		2021	
(Dollars in Millions)	**Amount**	**% of Sales***	**Amount**	**% of Sales***
Consumer Health	$ 493	3.3 %	$ 459	3.1 %
Pharmaceutical	11,622	22.1	11,878	23.0
MedTech	2,488	9.1	2,377	8.8
Total research and development expense	$ 14,603	15.4 %	$ 14,714	15.7 %
Percent increase/(decrease) over the prior year	(0.8)%		21.0 %	

*As a percent to segment sales

Research and development activities represent a significant part of the Company's business. These expenditures relate to the processes of discovering, testing and developing new products, upfront payments and developmental milestones, improving existing products, as well as ensuring product efficacy and regulatory compliance prior to launch. The Company remains committed to investing in research and development with the aim of delivering high quality and innovative products.

Research and Development decreased as a percent to sales primarily driven by:
- Lower milestone payments in the Pharmaceutical business

In-Process Research and Development (IPR&D): In the fiscal year 2022, the Company recorded an intangible asset impairment charge of approximately $0.8 billion related to an in-process research and development asset, bermekimab (JnJ-77474462), an investigational drug for the treatment of Atopic Dermatitis (AD) and Hidradenitis Suppurativa (HS). Additional information regarding efficacy of the AD indication and HS indication became available which led the Company to the decision to terminate the development of bermekimab for both AD and HS. The Company acquired all rights to bermekimab from XBiotech, Inc. in the fiscal year 2020. In fiscal year 2021, the Company recorded a partial IPR&D charge of $0.9 billion primarily related to expected development delays in the general surgery digital robotics platform (Ottava) acquired with the Auris Health acquisition in 2019. The impairment charge was calculated based on revisions to the discounted cash flow valuation model reflecting a delay of first in human procedures of approximately two years from the initial acquisition model assumption of the second half of 2022. The Company will continue to monitor the remaining $1.5 billion Ottava platform intangible asset as development program activities are ongoing.

Other (Income) Expense, Net: Other (income) expense, net is the account where the Company records gains and losses related to the sale and write-down of certain investments in equity securities held by Johnson & Johnson Innovation - JJDC, Inc. (JJDC), changes in the fair value of securities, investment (income)/loss related to employee benefit programs, gains and losses on divestitures, certain transactional currency gains and losses, acquisition and divestiture related costs, litigation accruals and settlements, as well as royalty income.

Other (income) expense, net for the fiscal year 2022 was unfavorable by $1.4 billion as compared to the prior year primarily due to the following:

(Dollars in Billions)(Income)/Expense	2022	2021	Change
Consumer Health separation costs	$ 1.0	0.1	0.9
Litigation related[1]	0.9	2.3	(1.4)
Changes in the fair value of securities	0.7	(0.5)	1.2
One-time COVID-19 vaccine manufacturing exit related costs	0.7	0.0	0.7
Acquisition, Integration and Divestiture related[2]	0.1	(0.5)	0.6
Restructuring related	0.1	0.1	0.0
Employee benefit plan related	(1.2)	(0.6)	(0.6)
Other	(0.4)	(0.4)	—
Total Other (Income) Expense, Net	$ 1.9	0.5	1.4

[1]2022 was primarily related to pelvic mesh and 2021 was primarily related to talc and Risperdal Gynecomastia
[2]2022 was primarily costs related to the acquisition of Abiomed. 2021 was primarily related to divestiture gains of two pharmaceutical brands outside the U.S.

Interest (Income) Expense: Interest (income) expense in the fiscal of 2022 was net interest income of $214 million as compared to interest expense of $130 million in the fiscal year 2021 primarily due to higher rates of interest earned on cash balances. Cash, cash equivalents and marketable securities totaled $23.5 billion at the end of 2022, and averaged $27.6 billion as compared to the cash, cash equivalents and marketable securities total of $31.6 billion and $28.4 billion average cash balance in 2021. The total debt balance at the end of 2022 was $39.7 billion with an average debt balance of $36.7 billion as compared to $33.8 billion at the end of 2021 and an average debt balance of $34.5 billion. The lower average cash, cash equivalents and marketable securities and higher average debt balance were primarily due to the acquisition of Abiomed in late December of 2022.

Income Before Tax by Segment

Income (loss) before tax by segment of business were as follows:

	Income Before Tax		Segment Sales		Percent of Segment Sales	
(Dollars in Millions)	**2022**	**2021**	**2022**	**2021**	**2022**	**2021**
Consumer Health[3]	$ 2,930	1,573	14,953	15,035	19.6 %	10.5
Pharmaceutical[3]	15,901	17,969	52,563	51,680	30.3	34.8
MedTech	4,607	4,373	27,427	27,060	16.8	16.2
Segment earnings before tax[1]	23,438	23,915	94,943	93,775	24.7	25.5
Less: Expenses not allocated to segments[2]	624	1,072				
Less: Consumer Health separation costs	1,089	67				
Worldwide income before tax	$ 21,725	22,776	94,943	93,775	22.9 %	24.3

(1) See Note 17 to the Consolidated Financial Statements for more details.
(2) Amounts not allocated to segments include interest (income) expense and general corporate (income) expense.
(3) Prior year income before tax of approximately $0.2 billion has been reclassified as certain international OTC products, primarily in China, were reclassified from the Pharmaceutical segment to the Consumer Health segment based on operational changes.

Consumer Health Segment:

In 2022, the Consumer Health segment income before tax as a percent of sales was 19.6% versus 10.5% in 2021. The increase in the income before tax as a percent of sales was primarily driven by the following:

- Lower litigation expense of $0.2 billion in 2022 versus $1.6 billion (primarily talc related) in 2021
- Reduction in brand marketing expenses in 2022 versus 2021
- Supply chain benefits in 2022

partially offset by:

- Commodity inflation in 2022

Pharmaceutical Segment:

In 2022, the Pharmaceutical segment income before tax as a percent to sales was 30.3% versus 34.8% in 2021. The decrease in the income before tax as a percent of sales was primarily driven by the following:

- One-time COVID-19 vaccine manufacturing exit related costs of $1.5 billion in 2022
- Unfavorable changes in the fair value of securities ($0.7 billion loss in 2022 vs. $0.5 billion gain in 2021)
- An IPR&D charge of $0.8 billion in 2022 related to bermekimab (JnJ-77474462), an investigational drug for the treatment of Atopic Dermatitis (AD) and Hidradenitis Suppurativa (HS)
- Lower divestiture gains of $0.1 billion in 2022 versus $0.6 billion related to two pharmaceutical brands outside the U.S. in fiscal 2021
- Currency impacts in Cost of Products Sold

partially offset by:

- Lower litigation related expense of $0.1 billion in 2022 versus $0.6 billion (primarily related to Risperdal Gynecomastia) in 2021
- Lower Research & Development milestone payments in 2022
- Lower brand marketing expenses in 2022 versus 2021

In fiscal 2020 and 2021, the Company entered into a series of contract manufacturing arrangements for vaccine production with third party contract manufacturing organizations. These arrangements provided the Company with supplemental commercial capacity for vaccine production and potentially transferable rights to such production if capacity is not required. The Company continues to evaluate and monitor both its internal and external supply arrangements. In fiscal 2022, the COVID-19 Vaccine related costs (mentioned above) included the remaining commitments and obligations, including external manufacturing network exit and related inventory costs and required clinical trial expenses, associated with the Company's modification of its

COVID-19 vaccine research program and manufacturing capacity to levels that meet all remaining customer contractual requirements.

MedTech Segment:

In 2022, the MedTech segment income before tax as a percent to sales was 16.8% versus 16.2% in 2021. The increase in the income before tax as a percent to sales was primarily driven by the following:

- An IPR&D charge of $0.9 billion in 2021 related to the general surgery offering in digital robotics (Ottava) acquired with the Auris Health acquisition in 2019 partially offset by:
- Higher litigation related expense of $0.6 billion in 2022, primarily related to pelvic mesh costs versus $0.1 billion in 2021
- Acquisition related costs of $0.3 billion in 2022 related to the Abiomed acquisition versus $0.1 billion in 2021

Restructuring: In the fiscal second quarter of 2018, the Company announced plans to implement actions across its Global Supply Chain that are intended to enable the Company to focus resources and increase investments in critical capabilities, technologies and solutions necessary to manufacture and supply its product portfolio of the future, enhance agility and drive growth. The Global Supply Chain actions included expanding its use of strategic collaborations, and bolstering its initiatives to reduce complexity, improving cost-competitiveness, enhancing capabilities and optimizing its supply chain network. The Company has achieved approximately $0.8 billion in annual pre-tax cost savings as outlined in the restructuring actions. In 2022, the Company recorded a pre-tax charge of $0.5 billion, which is included on the following lines of the Consolidated Statement of Earnings, $0.3 billion in restructuring, $0.1 billion in other (income) expense and $0.1 billion in cost of products sold. Total project costs of approximately $2.2 billion have been recorded since the restructuring was announced. The program was completed in the fiscal fourth quarter of 2022.

See Note 20 to the Consolidated Financial Statements for additional details related to the restructuring programs.

Provision for Taxes on Income: The worldwide effective income tax rate was 17.4% in 2022 and 8.3% in 2021.

In the fiscal 2022, the Company incurred approximately $0.5 billion net incremental international tax cost related to the legal separation of the Consumer Health business, and may continue to incur additional cost in fiscal 2023.

On December 15, 2022, the European Union (EU) Member States formally adopted the EU's Pillar Two Directive, which generally provides for a minimum effective tax rate of 15%, as established by the Organization for Economic Co-operation and Development (OECD) Pillar Two Framework that was supported by over 130 countries worldwide. The EU effective dates are January 1, 2024, and January 1, 2025, for different aspects of the directive.

A significant number of other countries are expected to also implement similar legislation, including South Korea which approved legislation on December 23, 2022 with a full effective date of January 1, 2024. The Company is continuing to evaluate the potential impact on future periods of the Pillar Two Framework, pending legislative adoption by additional individual countries, including those within the European Union.

For discussion related to the fiscal 2022 provision for taxes refer to Note 8 to the Consolidated Financial Statements.

Liquidity and Capital Resources

Liquidity & Cash Flows

Cash and cash equivalents were $14.1 billion at the end of 2022 as compared to $14.5 billion at the end of 2021.

The primary sources and uses of cash that contributed to the $0.4 billion decrease were:

(Dollars In Billions)	
$ 14.5	Q4 2021 Cash and cash equivalents balance
21.2	cash generated from operating activities
(12.4)	net cash used by investing activities
(8.9)	net cash used by financing activities
$ (0.3)	effect of exchange rate and rounding
$ 14.1	Q4 2022 Cash and cash equivalents balance

In addition, the Company had $9.4 billion in marketable securities at the end of fiscal year 2022 and $17.1 billion at the end of fiscal year 2021. See Note 1 to the Consolidated Financial Statements for additional details on cash, cash equivalents and marketable securities.

Cash flow from operations of $21.2 billion was the result of:

(Dollars In Billions)	
$ 17.9	Net Earnings
7.3	non-cash expenses and other adjustments primarily for depreciation and amortization, stock-based compensation and asset write-downs partially offset by the deferred tax provision, net gain on sale of assets/businesses and credit losses and accounts receivable allowances
(2.0)	a decrease in current and non-current liabilities
0.7	a decrease in other current and non-current assets
1.1	an increase in accounts payable and accrued liabilities
(3.8)	an increase in accounts receivable and inventories
$ 21.2	Cash Flow from operations

Investing activities use of $12.4 billion of cash was primarily used for:

(Dollars In Billions)	
$ (4.0)	additions to property, plant and equipment
(17.7)	acquisitions
0.5	proceeds from the disposal of assets/businesses, net
9.2	net sales of investments
(0.2)	Credit support agreements activity, net
(0.2)	other (primarily licenses and milestones) and rounding
$ (12.4)	Net cash used for investing activities

Financing activities use of $8.9 billion of cash was primarily used for:

(Dollars In Billions)	
$ (11.7)	dividends to shareholders
(6.0)	repurchase of common stock
7.5	net proceeds from short and long term debt
1.3	proceeds from stock options exercised/employee withholding tax on stock awards, net
$ (8.9)	Net cash used for financing activities

As of January 1, 2023, the Company's notes payable and long-term debt was in excess of cash, cash equivalents and marketable securities. As of January 1, 2023, the net debt position was $16.1 billion as compared to the prior year of $2.1 billion. The increase was primarily due to the acquisition of Abiomed, Inc. in December 2022. The debt balance at the end of 2022 was $39.7 billion as compared to $33.8 billion in 2021. Considering recent market conditions, the Company has re-evaluated its operating cash flows and liquidity profile and does not foresee any significant incremental risk. The Company anticipates that operating cash flows, the ability to raise funds from external sources, borrowing capacity from existing committed credit facilities and access to the commercial paper markets will continue to provide sufficient resources to fund operating needs, including the Company's remaining balance to be paid on the agreement to settle opioid litigation for approximately $2.7 billion and the establishment of the $2.0 billion trust for talc related liabilities (See Note 19 to the Consolidated Financial Statements for additional details). In addition, the Company monitors the global capital markets on an ongoing basis and from time to time may raise capital when market conditions are favorable. Effective beginning in fiscal 2022, the U.S. Tax Cuts and Job Act of 2017 (TCJA) requires the Company to deduct U.S. and international research and development expenditures for tax purposes over 5 to 15 years, instead of in the current fiscal year. As a result, in fiscal 2022, the Company experienced an increase in annual cash tax payments of approximately $1.2 billion above what otherwise would have been remitted to the U.S Treasury. The Company concurrently records a deferred tax benefit for the future amortization of the research and development (R&D) for tax purposes. The requirement to expense R&D as incurred is unchanged for U.S. GAAP purposes and the impact to pre-tax R&D expense is not affected by this provision.

On September 14, 2022, the Company announced that its Board of Directors approved a share repurchase program, authorizing the Company to purchase up to $5.0 billion of the Company's Common Stock. Share repurchases may be made at management’s discretion from time to time on the open market or through privately negotiated transactions. The repurchase program has no time limit and may be suspended for periods or discontinued at any time. Any shares acquired will be available

for general corporate purposes. The Company intends to finance the share repurchase program through available cash. Through January 1, 2023, approximately $2.5 billion has been repurchased under the program.

The following table summarizes the Company's material contractual obligations and their aggregate maturities as of January 1, 2023: To satisfy these obligations, the Company intends to use cash from operations.

(Dollars in Millions)	Tax Legislation (TCJA)	Debt Obligations	Interest on Debt Obligations	Total
2023	$ 1,522	1,551	893	3,966
2024	2,029	1,392	843	4,264
2025	2,536	1,667	789	4,992
2026	—	1,996	744	2,740
2027	—	2,271	736	3,007
After 2026	—	19,562	8,772	28,334
Total	**$ 6,087**	**28,439**	**12,777**	**47,303**

For tax matters, see Note 8 to the Consolidated Financial Statements.

Financing and Market Risk

The Company uses financial instruments to manage the impact of foreign exchange rate changes on cash flows. Accordingly, the Company enters into forward foreign exchange contracts to protect the value of certain foreign currency assets and liabilities and to hedge future foreign currency transactions primarily related to product costs. Gains or losses on these contracts are offset by the gains or losses on the underlying transactions. A 10% appreciation of the U.S. Dollar from the January 1, 2023 market rates would increase the unrealized value of the Company's forward contracts by $0.1 billion. Conversely, a 10% depreciation of the U.S. Dollar from the January 1, 2023 market rates would decrease the unrealized value of the Company's forward contracts by $0.1 billion. In either scenario, the gain or loss on the forward contract would be offset by the gain or loss on the underlying transaction, and therefore, would have no impact on future anticipated earnings and cash flows.

The Company hedges the exposure to fluctuations in currency exchange rates, and the effect on certain assets and liabilities in foreign currency, by entering into currency swap contracts. A 1% change in the spread between U.S. and foreign interest rates on the Company's interest rate sensitive financial instruments would either increase or decrease the unrealized value of the Company's swap contracts by approximately $1.7 billion. In either scenario, at maturity, the gain or loss on the swap contract would be offset by the gain or loss on the underlying transaction, and therefore, would have no impact on future anticipated cash flows.

The Company does not enter into financial instruments for trading or speculative purposes. Further, the Company has a policy of only entering into contracts with parties that have at least an investment grade credit rating. The counterparties to these contracts are major financial institutions and there is no significant concentration of exposure with any one counterparty. Management believes the risk of loss is remote. The Company entered into credit support agreements (CSA) with certain derivative counterparties establishing collateral thresholds based on respective credit ratings and netting agreements. See Note 6 to the Consolidated Financial Statements for additional details on credit support agreements.

The Company invests in both fixed rate and floating rate interest earning securities which carry a degree of interest rate risk. The fair market value of fixed rate securities may be adversely impacted due to a rise in interest rates, while floating rate securities may produce less income than predicted if interest rates fall. A 1% (100 basis points) change in spread on the Company's interest rate sensitive investments would either increase or decrease the unrealized value of cash equivalents and current marketable securities by less than $0.1 billion.

The Company has access to substantial sources of funds at numerous banks worldwide. In September 2022, the Company secured a new 364-day Credit Facility of $10 billion, which expires on September 7, 2023. In November 2022, the Company secured an additional 364-day revolving Credit Facility of $10 billion, which has an expiration of November 21, 2023. Interest charged on borrowings under the credit line agreement is based on either Secured Overnight Financing Rate (SOFR) Reference Rate or other applicable market rate as allowed plus applicable margins. Commitment fees under the agreement are not material.

Total borrowings at the end of 2022 and 2021 were $39.7 billion and $33.8 billion, respectively. The increase in borrowings was due to the acquisition of Abiomed, Inc. In 2022, net debt (cash and current marketable securities, net of debt) was $16.1 billion compared to net debt of $2.1 billion in 2021. Total debt represented 34.1% of total capital (shareholders' equity and total debt) in 2022 and 31.3% of total capital in 2021. Shareholders' equity per share at the end of 2022 was $29.39 compared to $28.16 at year-end 2021.

A summary of borrowings can be found in Note 7 to the Consolidated Financial Statements.

Dividends
The Company increased its dividend in 2022 for the 60th consecutive year. Cash dividends paid were $4.45 per share in 2022 and $4.19 per share in 2021.

On January 3, 2023, the Board of Directors declared a regular cash dividend of $1.13 per share, payable on March 7, 2023 to shareholders of record as of February 21, 2023.

Other Information

Critical Accounting Policies and Estimates

Management's discussion and analysis of results of operations and financial condition are based on the Company's consolidated financial statements that have been prepared in accordance with accounting principles generally accepted in the U.S. (GAAP). The preparation of these financial statements requires that management make estimates and assumptions that affect the amounts reported for revenues, expenses, assets, liabilities and other related disclosures. Actual results may or may not differ from these estimates. The Company believes that the understanding of certain key accounting policies and estimates are essential in achieving more insight into the Company's operating results and financial condition. These key accounting policies include revenue recognition, income taxes, legal and self-insurance contingencies, valuation of long-lived assets, assumptions used to determine the amounts recorded for pensions and other employee benefit plans and accounting for stock based awards.

Revenue Recognition: The Company recognizes revenue from product sales when obligations under the terms of a contract with the customer are satisfied; generally, this occurs with the transfer of control of the goods to customers. The Company's global payment terms are typically between 30 to 90 days. Provisions for certain rebates, sales incentives, trade promotions, coupons, product returns, discounts to customers and governmental clawback provisions are accounted for as variable consideration and recorded as a reduction in sales.

Product discounts granted are based on the terms of arrangements with direct, indirect and other market participants, as well as market conditions, including consideration of competitor pricing. Rebates are estimated based on contractual terms, historical experience, patient outcomes, trend analysis and projected market conditions in the various markets served. The Company evaluates market conditions for products or groups of products primarily through the analysis of wholesaler and other third-party sell-through and market research data, as well as internally generated information.

Sales returns are estimated and recorded based on historical sales and returns information. Products that exhibit unusual sales or return patterns due to dating, competition or other marketing matters are specifically investigated and analyzed as part of the accounting for sales return accruals.

Sales returns allowances represent a reserve for products that may be returned due to expiration, destruction in the field, or in specific areas, product recall. The sales returns reserve is based on historical return trends by product and by market as a percent to gross sales. In accordance with the Company's accounting policies, the Company generally issues credit to customers for returned goods. The Company's sales returns reserves are accounted for in accordance with the U.S. GAAP guidance for revenue recognition when right of return exists. Sales returns reserves are recorded at full sales value. Sales returns in the Consumer Health and Pharmaceutical segments are almost exclusively not resalable. Sales returns for certain franchises in the MedTech segment are typically resalable but are not material. The Company infrequently exchanges products from inventory for returned products. The sales returns reserve for the total Company has been approximately 1.0% of annual net trade sales during the fiscal years 2022, 2021 and 2020.

Promotional programs, such as product listing allowances and cooperative advertising arrangements, are recorded in the same period as related sales. Continuing promotional programs include coupons and volume-based sales incentive programs. The redemption cost of consumer coupons is based on historical redemption experience by product and value. Volume-based incentive programs are based on the estimated sales volumes for the incentive period and are recorded as products are sold. These arrangements are evaluated to determine the appropriate amounts to be deferred or recorded as a reduction of revenue. The Company also earns profit-share payments through collaborative arrangements of certain products, which are included in sales to customers. Profit-share payments were less than 2.0% of the total revenues in fiscal year 2022 and less than 3.0% of the total revenues in fiscal years 2021 and 2020 and are included in sales to customers.

In addition, the Company enters into collaboration arrangements that contain multiple revenue generating activities. Amounts due from collaborative partners for these arrangements are recognized as each activity is performed or delivered, based on the relative selling price. Upfront fees received as part of these arrangements are deferred and recognized over the performance period. See Note 1 to the Consolidated Financial Statements for additional disclosures on collaborations.

Reasonably likely changes to assumptions used to calculate the accruals for rebates, returns and promotions are not anticipated to have a material effect on the financial statements. The Company currently discloses the impact of changes to assumptions in the quarterly or annual filing in which there is a material financial statement impact.

Below are tables that show the progression of accrued rebates, returns, promotions, reserve for doubtful accounts and reserve for cash discounts by segment of business for the fiscal years ended January 1, 2023 and January 2, 2022.

Consumer Health Segment

(Dollars in Millions)	Balance at Beginning of Period	Accruals	Payments/Credits	Balance at End of Period
2022				
Accrued rebates [1]	$ 287	1,052	(948)	391
Accrued returns	76	83	(88)	71
Accrued promotions	387	2,077	(2,008)	456
Subtotal	$ 750	3,212	(3,044)	918
Reserve for doubtful accounts	32	5	(3)	34
Reserve for cash discounts	15	210	(208)	17
Total	$ 797	3,427	(3,255)	969
2021				
Accrued rebates[1]	$ 289	893	(895)	287
Accrued returns	76	136	(136)	76
Accrued promotions	428	1,958	(1,999)	387
Subtotal	$ 793	2,987	(3,030)	750
Reserve for doubtful accounts	39	0	(7)	32
Reserve for cash discounts	12	213	(210)	15
Total	$ 844	3,200	(3,247)	797

(1) Includes reserve for customer rebates of $82 million at January 1, 2023 and $80 million at January 2, 2022, recorded as a contra asset.

Pharmaceutical Segment

(Dollars in Millions)	Balance at Beginning of Period	Accruals	Payments/Credits[2]	Balance at End of Period
2022				
Accrued rebates [1]	$ 10,331	43,026	(41,068)	12,289
Accrued returns	520	444	(315)	649
Accrued promotions	3	5	(7)	1
Subtotal	$ 10,854	43,475	(41,390)	12,939
Reserve for doubtful accounts	50	0	(6)	44
Reserve for cash discounts	94	1,281	(1,265)	110
Total	$ 10,998	44,756	(42,661)	13,093
2021				
Accrued rebates [1]	$ 9,837	37,922	(37,428)	10,331
Accrued returns	460	345	(285)	520
Accrued promotions	6	13	(16)	3
Subtotal	$ 10,303	38,280	(37,729)	10,854
Reserve for doubtful accounts	52	18	(20)	50
Reserve for cash discounts	70	1,163	(1,139)	94
Total	$ 10,425	39,461	(38,888)	10,998

(1) Includes reserve for customer rebates of $203 million at January 1, 2023 and $218 million at January 2, 2022, recorded as a contra asset.

(2) Includes prior period adjustments

MedTech Segment

(Dollars in Millions)		Balance at Beginning of Period	Accruals	Payments/Credits	Balance at End of Period
2022					
Accrued rebates[1]	$	1,446	6,131	(6,107)	1,470
Accrued returns		134	531	(531)	134
Accrued promotions		54	102	(113)	43
Subtotal	$	1,634	6,764	(6,751)	1,647
Reserve for doubtful accounts		148	6	(29)	125
Reserve for cash discounts		10	99	(100)	9
Total	$	1,792	6,869	(6,880)	1,781
2021					
Accrued rebates[1]	$	1,174	5,942	(5,670)	1,446
Accrued returns		138	559	(563)	134
Accrued promotions		52	140	(138)	54
Subtotal	$	1,364	6,641	(6,371)	1,634
Reserve for doubtful accounts		202	12	(66)	148
Reserve for cash discounts		9	96	(95)	10
Total	$	1,575	6,749	(6,532)	1,792

(1) Includes reserve for customer rebates of $802 million at January 1, 2023 and $845 million at January 2, 2022, recorded as a contra asset.

Income Taxes: Income taxes are recorded based on amounts refundable or payable for the current year and include the results of any difference between U.S. GAAP accounting and tax reporting, recorded as deferred tax assets or liabilities. The Company estimates deferred tax assets and liabilities based on enacted tax regulations and rates. Future changes in tax laws and rates may affect recorded deferred tax assets and liabilities.

The Company has unrecognized tax benefits for uncertain tax positions. The Company follows U.S. GAAP, which prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken in a tax return. Management believes that changes in these estimates would not have a material effect on the Company's results of operations, cash flows or financial position.

The Company has recorded deferred tax liabilities on all undistributed earnings prior to December 31, 2017 from its international subsidiaries. The Company has not provided deferred taxes on the undistributed earnings subsequent to January 1, 2018 from certain international subsidiaries where the earnings are considered to be indefinitely reinvested. The Company intends to continue to reinvest these earnings in those international operations. If the Company decides at a later date to repatriate these earnings to the U.S., the Company would be required to provide for the net tax effects on these amounts. The Company estimates that the tax effect of this repatriation would be approximately $0.5 billion under currently enacted tax laws and regulations and at current currency exchange rates. This amount does not include the possible benefit of U.S. foreign tax credits, which may substantially offset this cost.

See Note 1 and Note 8 to the Consolidated Financial Statements for further information regarding income taxes.

Legal and Self Insurance Contingencies: The Company records accruals for various contingencies, including legal proceedings and product liability claims as these arise in the normal course of business. The accruals are based on management's judgment as to the probability of losses and, where applicable, actuarially determined estimates. The Company has self insurance through a wholly-owned captive insurance company. In addition to accruals in the self insurance program, claims that exceed the insurance coverage are accrued when losses are probable and amounts can be reasonably estimated.

The Company follows the provisions of U.S. GAAP when recording litigation related contingencies. A liability is recorded when a loss is probable and can be reasonably estimated.

See Notes 1 and 19 to the Consolidated Financial Statements for further information regarding product liability and legal proceedings.

Long-Lived and Intangible Assets: The Company assesses changes, both qualitatively and quantitatively, in economic conditions and makes assumptions regarding estimated future cash flows in evaluating the value of the Company's property, plant and equipment, goodwill and intangible assets. As these assumptions and estimates may change over time, it may or may not be necessary for the Company to record impairment charges.

Employee Benefit Plans: The Company sponsors various retirement and pension plans, including defined benefit, defined contribution and termination indemnity plans, which cover most employees worldwide. These plans are based on assumptions for the discount rate, expected return on plan assets, mortality rates, expected salary increases, healthcare cost trend rates and attrition rates. See Note 10 to the Consolidated Financial Statements for further details on these rates.

Stock Based Compensation: The Company recognizes compensation expense associated with the issuance of equity instruments to employees for their services. Based on the type of equity instrument, the fair value is estimated on the date of grant using either the Black-Scholes option valuation model or a combination of both the Black-Scholes option valuation model and Monte Carlo valuation model, and is expensed in the financial statements over the service period. The input assumptions used in determining fair value are the expected life, expected volatility, risk-free rate and expected dividend yield. For performance share units, the fair market value is calculated for the two component goals at the date of grant: adjusted operational earnings per share and relative total shareholder return. The fair values for the earnings per share goal of each performance share unit was estimated on the date of grant using the fair market value of the shares at the time of the award, discounted for dividends, which are not paid on the performance share units during the vesting period. The fair value for the relative total shareholder return goal of each performance share unit was estimated on the date of grant using the Monte Carlo valuation model. See Note 16 to the Consolidated Financial Statements for additional information.

New Accounting Pronouncements
Refer to Note 1 to the Consolidated Financial Statements for recently adopted accounting pronouncements and recently issued accounting pronouncements not yet adopted as of January 1, 2023.

Economic and Market Factors

The Company is aware that its products are used in an environment where, for more than a decade, policymakers, consumers and businesses have expressed concerns about the rising cost of healthcare. In response to these concerns, the Company has a long-standing policy of pricing products responsibly. For the period 2012 - 2022, in the U.S., the weighted average compound annual growth rate of the Company's net price increases for healthcare products (prescription and over-the-counter drugs, hospital and professional products) was below the U.S. Consumer Price Index (CPI).

The Company operates in certain countries where the economic conditions continue to present significant challenges. The Company continues to monitor these situations and take appropriate actions. Inflation rates continue to have an effect on worldwide economies and, consequently, on the way companies operate. The Company has accounted for operations in Argentina and Venezuela as highly inflationary, as the prior three-year cumulative inflation rate surpassed 100%. Beginning in the fiscal second quarter of 2022, the Company accounted for operations in Turkey as highly inflationary, as the prior three-year cumulative inflation rate surpassed 100%. This did not have a material impact to the Company's results in the period. In the face of increasing costs, the Company strives to maintain its profit margins through cost reduction programs, productivity improvements and periodic price increases.

Russia-Ukraine War

Although the long-term implications of Russia's invasion of Ukraine are difficult to predict at this time, the financial impact of the conflict in the fiscal 2022, including accounts receivable or inventory reserves, was not material. As of both the fiscal years ending January 1, 2023 and January 2, 2022, the business of the Company's Ukraine subsidiaries represented less than 1% of the Company's consolidated assets and revenues. As of both the fiscal years ending January 1, 2023 and January 2, 2022, the business of the Company's Russian subsidiaries represented less than 1% of the Company's consolidated assets and represented 1% of revenues. In early March, the Company took steps to suspend all advertising, enrollment in clinical trials, and any additional investment in Russia. Additionally, at the end of March, the Company made the decision to suspend supply of personal care products in Russia. The Company continues to supply its other products as patients rely on many of the products for healthcare purposes.

The Company is exposed to fluctuations in currency exchange rates. A 1% change in the value of the U.S. Dollar as compared to all foreign currencies in which the Company had sales, income or expense in 2022 would have increased or decreased the translation of foreign sales by approximately $0.5 billion and net income by approximately $0.1 billion.

Governments around the world consider various proposals to make changes to tax laws, which may include increasing or decreasing existing statutory tax rates. In connection with various government initiatives, companies are required to disclose more information to tax authorities on operations around the world, which may lead to greater audit scrutiny of profits earned in other countries. A change in statutory tax rate in any country would result in the revaluation of the Company's deferred tax assets and liabilities related to that particular jurisdiction in the period in which the new tax law is enacted. This change would result in an expense or benefit recorded to the Company's Consolidated Statement of Earnings. The Company closely monitors these proposals as they arise in the countries where it operates. Changes to the statutory tax rate may occur at any time, and any related expense or benefit recorded may be material to the fiscal quarter and year in which the law change is enacted.

The Company faces various worldwide healthcare changes that may continue to result in pricing pressures that include healthcare cost containment and government legislation relating to sales, promotions, pricing and reimbursement of healthcare products.

Changes in the behavior and spending patterns of purchasers of healthcare products and services, including delaying medical procedures, rationing prescription medications, reducing the frequency of physician visits and foregoing healthcare insurance coverage, as a result of the current global economic downturn, may continue to impact the Company's businesses.

The Company also operates in an environment increasingly hostile to intellectual property rights. Firms have filed Abbreviated New Drug Applications or Biosimilar Biological Product Applications with the U.S. FDA or otherwise challenged the coverage and/or validity of the Company's patents, seeking to market generic or biosimilar forms of many of the Company's key pharmaceutical products prior to expiration of the applicable patents covering those products. In the event the Company is not successful in defending the patent claims challenged in the resulting lawsuits, generic or biosimilar versions of the products at issue will be introduced to the market, resulting in the potential for substantial market share and revenue losses for those products, and which may result in a non-cash impairment charge in any associated intangible asset. There is also a risk that one or more competitors could launch a generic or biosimilar version of the product at issue following regulatory approval even though one or more valid patents are in place.

Legal Proceedings

Johnson & Johnson and certain of its subsidiaries are involved in various lawsuits and claims regarding product liability, intellectual property, commercial, employment, indemnification and other matters; governmental investigations; and other legal proceedings that arise from time to time in the ordinary course of business.

The Company records accruals for loss contingencies associated with these legal matters when it is probable that a liability will be incurred and the amount of the loss can be reasonably estimated. As of January 1, 2023, the Company has determined that the liabilities associated with certain litigation matters are probable and can be reasonably estimated. The Company has accrued for these matters and will continue to monitor each related legal issue and adjust accruals as might be warranted based

on new information and further developments in accordance with ASC 450-20-25. For these and other litigation and regulatory matters discussed below for which a loss is probable or reasonably possible, the Company is unable to estimate the possible loss or range of loss beyond the amounts accrued. Amounts accrued for legal contingencies often result from a complex series of judgments about future events and uncertainties that rely heavily on estimates and assumptions including timing of related payments. The ability to make such estimates and judgments can be affected by various factors including, among other things, whether damages sought in the proceedings are unsubstantiated or indeterminate; scientific and legal discovery has not commenced or is not complete; proceedings are in early stages; matters present legal uncertainties; there are significant facts in dispute; procedural or jurisdictional issues; the uncertainty and unpredictability of the number of potential claims; ability to achieve comprehensive multi-party settlements; complexity of related cross-claims and counterclaims; and/or there are numerous parties involved. To the extent adverse awards, judgments or verdicts have been rendered against the Company, the Company does not record an accrual until a loss is determined to be probable and can be reasonably estimated.

In the Company's opinion, based on its examination of these matters, its experience to date and discussions with counsel, the ultimate outcome of legal proceedings, net of liabilities accrued in the Company's balance sheet, is not expected to have a material adverse effect on the Company's financial position. However, the resolution of, or increase in accruals for, one or more of these matters in any reporting period may have a material adverse effect on the Company's results of operations and cash flows for that period.

See Note 19 to the Consolidated Financial Statements included in Item 8 of this report for further information regarding legal proceedings.

Common Stock

The Company’s Common Stock is listed on the New York Stock Exchange under the symbol JNJ. As of February 10, 2023, there were 124,211 record holders of Common Stock of the Company.

Item 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The information called for by this item is incorporated herein by reference to “Item 7. Management’s Discussion and Analysis of Results of Operations and Financial Condition - Liquidity and Capital Resources - Financing and Market Risk” of this Report; and Note 1 “Summary of Significant Accounting Policies - Financial Instruments” of the Notes to Consolidated Financial Statements included in Item 8 of this Report.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Summary of Significant Accounting Policies

Principles of Consolidation

The consolidated financial statements include the accounts of Johnson & Johnson and its subsidiaries (the Company). Intercompany accounts and transactions are eliminated. Columns and rows within tables may not add due to rounding. Percentages have been calculated using actual, non-rounded figures.

Description of the Company and Business Segments

The Company has approximately 152,700 employees worldwide engaged in the research and development, manufacture and sale of a broad range of products in the healthcare field. The Company conducts business in virtually all countries of the world and its primary focus is on products related to human health and well-being.

The Company is organized into three business segments: Consumer Health, Pharmaceutical and MedTech. The Consumer Health segment includes a broad range of products used in the Baby Care, Oral Care, Skin Health/Beauty, Over-the-Counter pharmaceutical, Women's Health and Wound Care markets. These products are marketed to the general public and sold online (eCommerce) and to retail outlets and distributors throughout the world. The Pharmaceutical segment is focused on the following therapeutic areas, including Immunology, Infectious diseases, Neuroscience, Oncology, Pulmonary Hypertension, and Cardiovascular and Metabolic diseases. Products in this segment are distributed directly to retailers, wholesalers, distributors, hospitals and healthcare professionals for prescription use. The MedTech segment includes a broad portfolio of products used in the Orthopaedic, Surgery, Interventional Solutions (cardiovascular and neurovascular) and Vision fields. These products are distributed to wholesalers, hospitals and retailers, and used principally in the professional fields by physicians, nurses, hospitals, eye care professionals and clinics.

In November 2021, the Company announced its intention to separate the Company's Consumer Health business (Kenvue as the name for the planned New Consumer Health Company), with the intention to create a new, publicly traded company by the end of the fiscal year 2023.

New Accounting Standards

Recently Adopted Accounting Standards

There were no new material accounting standards adopted in fiscal 2022.

Recently Issued Accounting Standards

Not Adopted as of January 1, 2023

ASU 2022-04: Liabilities-Supplier Finance Programs (Topic 405-50) – Disclosure of Supplier Finance Program Obligations

This update requires that a buyer in a supplier finance program disclose additional information about the program to allow financial statement users to better understand the effect of the programs on an entity's working capital, liquidity, and cash flows. This update will be effective for the Company for fiscal years beginning after December 15, 2022, except for the amendment on roll forward information, which is effective for fiscal years beginning after December 15, 2023. Early adoption is permitted. The Company is currently assessing the impact of this update on its disclosures and will adopt this standard in the fiscal first quarter of 2023.

Cash Equivalents

The Company classifies all highly liquid investments with stated maturities of three months or less from date of purchase as cash equivalents and all highly liquid investments with stated maturities of greater than three months from the date of purchase as current marketable securities. The Company has a policy of making investments only with commercial institutions that have at least an investment grade credit rating. The Company invests its cash primarily in government securities and obligations, corporate debt securities, money market funds and reverse repurchase agreements (RRAs).

RRAs are collateralized by deposits in the form of Government Securities and Obligations for an amount not less than 102% of their value. The Company does not record an asset or liability as the Company is not permitted to sell or repledge the associated collateral. The Company has a policy that the collateral has at least an A (or equivalent) credit rating. The Company utilizes a third party custodian to manage the exchange of funds and ensure that collateral received is maintained at 102% of the value of the RRAs on a daily basis. RRAs with stated maturities of greater than three months from the date of purchase are classified as marketable securities.

Investments

Investments classified as held to maturity investments are reported at amortized cost and realized gains or losses are reported in earnings. Investments classified as available-for-sale debt securities are carried at estimated fair value with unrealized gains and

losses recorded as a component of accumulated other comprehensive income. Available-for-sale securities available for current operations are classified as current assets otherwise, they are classified as long term. Management determines the appropriate classification of its investment in debt and equity securities at the time of purchase and re-evaluates such determination at each balance sheet date. The Company reviews its investments for impairment and adjusts these investments to fair value through earnings, as required.

Property, Plant and Equipment and Depreciation

Property, plant and equipment are stated at cost. The Company utilizes the straight-line method of depreciation over the estimated useful lives of the assets:

Building and building equipment	30 years
Land and leasehold improvements	10 - 20 years
Machinery and equipment	2 - 13 years

The Company capitalizes certain computer software and development costs, included in machinery and equipment, when incurred in connection with developing or obtaining computer software for internal use. Capitalized software costs are amortized over the estimated useful lives of the software, which generally range from 3 to 8 years.

The Company reviews long-lived assets to assess recoverability using undiscounted cash flows. When certain events or changes in operating or economic conditions occur, an impairment assessment may be performed on the recoverability of the carrying value of these assets. If the asset is determined to be impaired, the loss is measured based on the difference between the asset's fair value and its carrying value. If quoted market prices are not available, the Company will estimate fair value using a discounted value of estimated future cash flows.

Revenue Recognition

The Company recognizes revenue from product sales when obligations under the terms of a contract with the customer are satisfied; generally, this occurs with the transfer of control of the goods to customers. The Company's global payment terms are typically between 30 to 90 days. Provisions for certain rebates, sales incentives, trade promotions, coupons, product returns, discounts to customers and governmental clawback provisions are accounted for as variable consideration and recorded as a reduction in sales. The liability is recognized within Accrued Rebates, Returns, and Promotions on the consolidated balance sheet.

Product discounts granted are based on the terms of arrangements with direct, indirect and other market participants, as well as market conditions, including consideration of competitor pricing. Rebates are estimated based on contractual terms, historical experience, patient outcomes, trend analysis and projected market conditions in the various markets served. A significant portion of the liability related to rebates is from the sale of the Company's pharmaceutical products within the U.S., primarily the Managed Care, Medicare and Medicaid programs, which amounted to $9.6 billion and $7.7 billion as of January 1, 2023 and January 2, 2022, respectively. The Company evaluates market conditions for products or groups of products primarily through the analysis of wholesaler and other third-party sell-through and market research data, as well as internally generated information.

Sales returns are estimated and recorded based on historical sales and returns information. Products that exhibit unusual sales or return patterns due to dating, competition or other marketing matters are specifically investigated and analyzed as part of the accounting for sales return accruals.

Sales returns allowances represent a reserve for products that may be returned due to expiration, destruction in the field, or in specific areas, product recall. The sales returns reserve is based on historical return trends by product and by market as a percent to gross sales. In accordance with the Company's accounting policies, the Company generally issues credit to customers for returned goods. The Company's sales returns reserves are accounted for in accordance with the U.S. GAAP guidance for revenue recognition when right of return exists. Sales returns reserves are recorded at full sales value. Sales returns in the Consumer Health and Pharmaceutical segments are almost exclusively not resalable. Sales returns for certain franchises in the MedTech segment are typically resalable but are not material. The Company infrequently exchanges products from inventory for returned products. The sales returns reserve for the total Company has been approximately 1.0% of annual net trade sales during each of the fiscal years 2022, 2021 and 2020.

Promotional programs, such as product listing allowances and cooperative advertising arrangements, are recorded in the same period as related sales. Continuing promotional programs include coupons and volume-based sales incentive programs. The redemption cost of consumer coupons is based on historical redemption experience by product and value. Volume-based incentive programs are based on the estimated sales volumes for the incentive period and are recorded as products are sold. These arrangements are evaluated to determine the appropriate amounts to be deferred or recorded as a reduction of revenue. The Company also earns profit-share payments through collaborative arrangements for certain products, which are included in sales to customers. Profit-share payments were less than 2.0% of the total revenues in fiscal year 2022 and less than 3.0% of the total revenues in fiscal years 2021 and 2020 and are included in sales to customers.

See Note 17 to the Consolidated Financial Statements for further disaggregation of revenue.

Shipping and Handling
Shipping and handling costs incurred were $1.1 billion, $1.1 billion and $1.0 billion in fiscal years 2022, 2021 and 2020, respectively, and are included in selling, marketing and administrative expense. The amount of revenue received for shipping and handling is less than 1.0% of sales to customers for all periods presented.

Inventories
Inventories are stated at the lower of cost or net realizable value determined by the first-in, first-out method.

Intangible Assets and Goodwill
The authoritative literature on U.S. GAAP requires that goodwill and intangible assets with indefinite lives be assessed annually for impairment. The Company completed its annual impairment test for 2022 in the fiscal fourth quarter. Future impairment tests will be performed annually in the fiscal fourth quarter, or sooner if warranted. Purchased in-process research and development is accounted for as an indefinite lived intangible asset until the underlying project is completed, at which point the intangible asset will be accounted for as a definite lived intangible asset. If warranted the purchased in-process research and development could be written off or partially impaired depending on the underlying program.

Intangible assets that have finite useful lives continue to be amortized over their useful lives, and are reviewed for impairment when warranted by economic conditions. See Note 5 for further details on Intangible Assets and Goodwill.

Financial Instruments
As required by U.S. GAAP, all derivative instruments are recorded on the balance sheet at fair value. Fair value is the exit price that would be received to sell an asset or paid to transfer a liability. Fair value is a market-based measurement determined using assumptions that market participants would use in pricing an asset or liability. The authoritative literature establishes a three-level hierarchy to prioritize the inputs used in measuring fair value, with Level 1 having the highest priority and Level 3 having the lowest. Changes in the fair value of derivatives are recorded each period in current earnings or other comprehensive income, depending on whether the derivative is designated as part of a hedge transaction, and if so, the type of hedge transaction.

The Company documents all relationships between hedged items and derivatives. The overall risk management strategy includes reasons for undertaking hedge transactions and entering into derivatives. The objectives of this strategy are: (1) minimize foreign currency exposure's impact on the Company's financial performance; (2) protect the Company's cash flow from adverse movements in foreign exchange rates; (3) ensure the appropriateness of financial instruments; and (4) manage the enterprise risk associated with financial institutions. See Note 6 for additional information on Financial Instruments.

Leases
The Company determines whether an arrangement is a lease at contract inception by establishing if the contract conveys the right to control the use of identified property, plant, or equipment for a period of time in exchange for consideration. Right of Use (ROU) Assets and Lease Liabilities for operating leases are included in Other assets, Accrued liabilities, and Other liabilities on the consolidated balance sheet. The ROU Assets represent the right to use an underlying asset for the lease term and lease liabilities represent an obligation to make lease payments arising from the lease. Commitments under finance leases are not significant, and are included in Property, plant and equipment, Loans and notes payable, and Long-term debt on the consolidated balance sheet.

ROU Assets and Lease Liabilities are recognized at the lease commencement date based on the present value of all minimum lease payments over the lease term. The Company uses its incremental borrowing rate based on the information available at commencement date in determining the present value of lease payments, when the implicit rate is not readily determinable. Lease terms may include options to extend or terminate the lease. These options are included in the lease term when it is reasonably certain that the Company will exercise that option. Operating lease expense is recognized on a straight-line basis over the lease term. The Company has elected the following policy elections on adoption: use of portfolio approach on leases of assets under master service agreements, exclusion of short term leases on the balance sheet, and not separating lease and non-lease components.

The Company primarily has operating lease for space, vehicles, manufacturing equipment and data processing equipment. The ROU asset pertaining to operating leases was $1.1 billion and $0.9 billion in fiscal years 2022 and 2021, respectively. The lease liability was $1.3 billion and $1.0 billion in fiscal years 2022 and 2021, respectively. The operating lease costs were $0.3 billion in fiscal years 2022, 2021 and 2020, respectively. Cash paid for amounts included in the measurement of lease liabilities were $0.3 billion in fiscal years 2022, 2021 and 2020, respectively.

Product Liability
Accruals for product liability claims are recorded, on an undiscounted basis, when it is probable that a liability has been incurred and the amount of the liability can be reasonably estimated based on existing information and actuarially determined estimates where applicable. The accruals are adjusted periodically as additional information becomes available. The Company

accrues an estimate of the legal defense costs needed to defend each matter when those costs are probable and can be reasonably estimated. To the extent adverse verdicts have been rendered against the Company, the Company does not record an accrual until a loss is determined to be probable and can be reasonably estimated.

The Company has self insurance through a wholly-owned captive insurance company. In addition to accruals in the self insurance program, claims that exceed the insurance coverage are accrued when losses are probable and amounts can be reasonably estimated.

Research and Development

Research and development expenses are expensed as incurred in accordance with ASC 730, Research and Development. Upfront and milestone payments made to third parties in connection with research and development collaborations are expensed as incurred up to the point of regulatory approval. Payments made to third parties subsequent to regulatory approval are capitalized and amortized over the remaining useful life of the related product. Amounts capitalized for such payments are included in other intangibles, net of accumulated amortization.

The Company enters into collaborative arrangements, typically with other pharmaceutical or biotechnology companies, to develop and commercialize drug candidates or intellectual property. These arrangements typically involve two (or more) parties who are active participants in the collaboration and are exposed to significant risks and rewards dependent on the commercial success of the activities. These collaborations usually involve various activities by one or more parties, including research and development, marketing and selling and distribution. Often, these collaborations require upfront, milestone and royalty or profit share payments, contingent upon the occurrence of certain future events linked to the success of the asset in development. Amounts due from collaborative partners related to development activities are generally reflected as a reduction of research and development expense because the performance of contract development services is not central to the Company’s operations. In general, the income statement presentation for these collaborations is as follows:

Nature/Type of Collaboration	Statement of Earnings Presentation
Third-party sale of product & profit share payments received	Sales to customers
Royalties/milestones paid to collaborative partner (post-regulatory approval)*	Cost of products sold
Royalties received from collaborative partner	Other income (expense), net
Upfront payments & milestones paid to collaborative partner (pre-regulatory approval)	Research and development expense
Research and development payments to collaborative partner	Research and development expense
Research and development payments received from collaborative partner or government entity	Reduction of Research and development expense

* Milestones are capitalized as intangible assets and amortized to cost of products sold over the useful life.

For all years presented, there was no individual project that represented greater than 5% of the total annual consolidated research and development expense.

The Company has a number of products and compounds developed in collaboration with strategic partners including XARELTO, co-developed with Bayer HealthCare AG and IMBRUVICA, developed in collaboration and co-marketed with Pharmacyclics LLC, an AbbVie company.

Separately, the Company has a number of licensing arrangements for products and compounds including DARZALEX, licensed from Genmab A/S.

Advertising

Costs associated with advertising are expensed in the year incurred and are included in selling, marketing and administrative expenses. Advertising expenses worldwide, which comprised television, radio, print media and Internet advertising, were $2.1 billion, $2.7 billion and $2.1 billion in fiscal years 2022, 2021 and 2020, respectively.

Income Taxes

Income taxes are recorded based on amounts refundable or payable for the current year and include the results of any difference between U.S. GAAP accounting and tax reporting, recorded as deferred tax assets or liabilities. The Company estimates deferred tax assets and liabilities based on enacted tax regulations and rates. Future changes in tax laws and rates may affect recorded deferred tax assets and liabilities in the future.

The Company has unrecognized tax benefits for uncertain tax positions. The Company follows U.S. GAAP which prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken in a tax return. Management believes that changes in these estimates would not have a material effect on the Company's results of operations, cash flows or financial position.

In 2017, the United States enacted into law new U.S. tax legislation, the U.S. Tax Cuts and Jobs Act (TCJA). This law included provisions for a comprehensive overhaul of the corporate income tax code, including a reduction of the statutory corporate tax rate from 35% to 21%, effective on January 1, 2018. The TCJA included a provision for a tax on all previously

undistributed earnings of U.S. companies located in foreign jurisdictions. Undistributed earnings in the form of cash and cash equivalents were taxed at a rate of 15.5% and all other earnings were taxed at a rate of 8.0%. This tax is payable over 8 years and will not accrue interest. These payments began in 2018 and will continue through 2025. The remaining balance at the end of the 2022 was approximately $6.1 billion, of which $4.6 billion is classified as noncurrent and reflected as "Long-term taxes payable" on the Company's balance sheet. The balance of this account is related to receivables from tax authorities not expected to be received in the next 12 months.

The TCJA also includes provisions for a tax on global intangible low-taxed income (GILTI). GILTI is described as the excess of a U.S. shareholder's total net foreign income over a deemed return on tangible assets, as provided by the TCJA. In January 2018, the FASB issued guidance that allows companies to elect as an accounting policy whether to record the tax effects of GILTI in the period the tax liability is generated (i.e., "period cost") or provide for deferred tax assets and liabilities related to basis differences that exist and are expected to effect the amount of GILTI inclusion in future years upon reversal (i.e., "deferred method"). The Company has elected to account for GILTI under the deferred method. The deferred tax amounts recorded are based on the evaluation of temporary differences that are expected to reverse as GILTI is incurred in future periods.

The Company has recorded deferred tax liabilities on all undistributed earnings prior to December 31, 2017 from its international subsidiaries. The Company has not provided deferred taxes on the undistributed earnings subsequent to January 1, 2018 from certain international subsidiaries where the earnings are considered to be indefinitely reinvested. The Company intends to continue to reinvest these earnings in those international operations. If the Company decides at a later date to repatriate these earnings to the U.S., the Company would be required to provide for the net tax effects on these amounts. The Company estimates that the tax effect of this repatriation would be approximately $0.5 billion under currently enacted tax laws and regulations and at current currency exchange rates. This amount does not include the possible benefit of U.S. foreign tax credits, which may substantially offset this cost.

See Note 8 to the Consolidated Financial Statements for further information regarding income taxes.

Net Earnings Per Share

Basic earnings per share is computed by dividing net earnings available to common shareholders by the weighted average number of common shares outstanding for the period. Diluted earnings per share reflects the potential dilution that could occur if securities were exercised or converted into common stock using the treasury stock method.

Use of Estimates

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the U.S. requires management to make estimates and assumptions that affect the amounts reported. Estimates are used when accounting for sales discounts, rebates, allowances and incentives, product liabilities, income taxes, withholding taxes, depreciation, amortization, employee benefits, contingencies and intangible asset and liability valuations. Actual results may or may not differ from those estimates.

The Company follows the provisions of U.S. GAAP when recording litigation related contingencies. A liability is recorded when a loss is probable and can be reasonably estimated. The best estimate of a loss within a range is accrued; however, if no estimate in the range is better than any other, the minimum amount is accrued.

Annual Closing Date

The Company follows the concept of a fiscal year, which ends on the Sunday nearest to the end of the month of December. Normally each fiscal year consists of 52 weeks, but every five or six years the fiscal year consists of 53 weeks, and therefore includes additional shipping days, as was the case in fiscal year 2020, and will be the case again in fiscal year 2026.

Reclassification

Certain prior period amounts have been reclassified to conform to current year presentation.

2. Cash, Cash Equivalents and Current Marketable Securities

At the end of the fiscal year 2022 and 2021, cash, cash equivalents and current marketable securities were comprised of:

(Dollars in Millions)	2022				
	Carrying Amount	Unrecognized Loss	Estimated Fair Value	Cash & Cash Equivalents	Current Marketable Securities
Cash	$ 4,926	—	4,926	4,926	—
U.S. Reverse repurchase agreements	1,419	—	1,419	1,419	—
Corporate debt securities[1]	873	(1)	872	—	873
Money market funds	5,368	—	5,368	5,368	—
Time deposits[1]	446	—	446	446	—
Subtotal	$ 13,032	(1)	13,031	12,159	873
U.S. Gov't Securities	$ 9,959	(28)	9,931	1,922	8,009
U.S. Gov't Agencies	210	(5)	205	—	205
Corporate and other debt securities	352	(1)	351	46	305
Subtotal available for sale[2]	$ 10,521	(34)	10,487	1,968	8,519
Total cash, cash equivalents and current marketable securities			**$**	**14,127**	**9,392**

(Dollars in Millions)	2021				
	Carrying Amount	Unrecognized Loss	Estimated Fair Value	Cash & Cash Equivalents	Current Marketable Securities
Cash	$ 2,936	—	2,936	2,936	—
Non-U.S. Sovereign Securities[1]	1,006	—	1,006	90	916
U.S. Reverse repurchase agreements	1,659	—	1,659	1,659	—
Corporate debt securities[1]	3,479	(1)	3,478	200	3,279
Money market funds	1,901	—	1,901	1,901	—
Time deposits[1]	900	—	900	900	—
Subtotal	11,881	(1)	11,880	7,686	4,195
U.S. Gov't Securities	$ 19,485	(4)	19,481	6,785	12,696
Corporate and other debt securities	246	—	246	16	230
Subtotal available for sale[2]	$ 19,731	(4)	19,727	6,801	12,926
Total cash, cash equivalents and current marketable securities				**$ 14,487**	**17,121**

[1] Held to maturity investments are reported at amortized cost and realized gains or losses are reported in earnings.
[2] Available for sale debt securities are reported at fair value with unrealized gains and losses reported net of taxes in other comprehensive income.

Fair value of government securities and obligations and corporate debt securities were estimated using quoted broker prices and significant other observable inputs.

The contractual maturities of the available for sale debt securities at January 1, 2023 are as follows:

(Dollars in Millions)	Cost Basis	Fair Value
Due within one year	$ 10,430	10,399
Due after one year through five years	91	88
Due after five years through ten years	—	—
Total debt securities	$ 10,521	10,487

The Company invests its excess cash in both deposits with major banks throughout the world and other high-quality money market instruments. The Company has a policy of making investments only with commercial institutions that have at least an investment grade credit rating.

3. Inventories

At the end of fiscal years 2022 and 2021, inventories were comprised of:

(Dollars in Millions)	**2022**	**2021**
Raw materials and supplies	$ 2,070	1,592
Goods in process	1,700	2,287
Finished goods	8,713	6,508
Total inventories	**$ 12,483**	**10,387**

4. Property, Plant and Equipment

At the end of fiscal years 2022 and 2021, property, plant and equipment at cost and accumulated depreciation were:

(Dollars in Millions)	**2022**	**2021**
Land and land improvements	$ 859	884
Buildings and building equipment	12,989	12,882
Machinery and equipment	30,431	29,774
Construction in progress	4,974	4,139
Total property, plant and equipment, gross	$ 49,253	47,679
Less accumulated depreciation	29,450	28,717
Total property, plant and equipment, net	**$ 19,803**	**18,962**

The Company capitalizes interest expense as part of the cost of construction of facilities and equipment. Interest expense capitalized in fiscal years 2022, 2021 and 2020 was $49 million, $49 million and $63 million, respectively.

Depreciation expense, including the amortization of capitalized interest in fiscal years 2022, 2021 and 2020 was $2.7 billion, $2.7 billion and $2.6 billion, respectively.

Upon retirement or other disposal of property, plant and equipment, the costs and related amounts of accumulated depreciation or amortization are eliminated from the asset and accumulated depreciation accounts, respectively. The difference, if any, between the net asset value and the proceeds are recorded in earnings.

5. Intangible Assets and Goodwill

At the end of fiscal years 2022 and 2021, the gross and net amounts of intangible assets were:

(Dollars in Millions)	2022	2021
Intangible assets with definite lives:		
Patents and trademarks — gross	$ 44,012	38,572
Less accumulated amortization	(22,266)	(20,088)
Patents and trademarks — net[1]	**$ 21,746**	**18,484**
Customer relationships and other intangibles — gross	$ 22,987	23,011
Less accumulated amortization	(12,901)	(11,925)
Customer relationships and other intangibles — net[2]	**$ 10,086**	**11,086**
Intangible assets with indefinite lives:		
Trademarks	$ 6,807	6,985
Purchased in-process research and development[3]	9,686	9,837
Total intangible assets with indefinite lives	**$ 16,493**	**16,822**
Total intangible assets — net	**$ 48,325**	**46,392**

[1]The change was primarily related to the intangible assets acquired with the acquisition of Abiomed, Inc. which was partially offset by amortization expense of previously existing intangible assets and the result of currency translation effects.
[2]The majority is comprised of customer relationships
[3]The reduction was primarily related to an intangible asset impairment charge of approximately $0.8 billion recorded in the fiscal year 2022 related to an in-process research and development asset, bermekimab (JnJ-77474462), an investigational drug for the treatment of Atopic Dermatitis (AD) and Hidradenitis Suppurativa (HS) acquired with the acquisition of XBiotech, Inc. in the fiscal year 2020. Additional information regarding efficacy of the AD and HS indications became available which led the Company to the decision to terminate the development of bermekimab for AD and HS. An additional reduction of $0.7 billion was driven by Monarch assets that reached commercialization and are now classified as having definite lives. This was partially offset by approximately $1.1 billion of IPR&D acquired with Abiomed, Inc.

Goodwill as of January 1, 2023 and January 2, 2022, as allocated by segment of business, was as follows:

(Dollars in Millions)	Consumer Health	Pharmaceutical	MedTech	Total
Goodwill at January 3, 2021	$ 10,336	11,009	15,048	36,393
Goodwill, related to acquisitions	—	—	—	—
Goodwill, related to divestitures	(9)	—	—	(9)
Currency translation/other	(517)	(429)	(192)	(1,138)
Goodwill at January 2, 2022	$ 9,810	10,580	14,856	35,246
Goodwill, related to acquisitions	—	—	11,056	11,056
Goodwill, related to divestitures	—	—	—	—
Currency translation/other	(626)	(396)	(49)	(1,071)
Goodwill at January 1, 2023	**$ 9,184**	**10,184**	**25,863**	**45,231**

The weighted average amortization period for patents and trademarks is 12 years. The weighted average amortization period for customer relationships and other intangible assets is 21 years. The amortization expense of amortizable assets included in Cost of products sold was $4.3 billion, $4.7 billion and $4.7 billion before tax, for the fiscal years ended January 1, 2023, January 2, 2022 and January 3, 2021, respectively. Intangible asset write-downs are included in Other (income) expense, net.

The estimated amortization expense for approved products, before tax, for the five succeeding years is approximately:

(Dollars in Millions)				
2023	**2024**	**2025**	**2026**	**2027**
$4,600	4,400	3,600	3,000	2,400

See Note 18 to the Consolidated Financial Statements for additional details related to acquisitions and divestitures.

6. Fair Value Measurements

The Company uses forward foreign exchange contracts to manage its exposure to the variability of cash flows, primarily related to the foreign exchange rate changes of future intercompany products and third-party purchases of materials denominated in a foreign currency. The Company uses cross currency interest rate swaps to manage currency risk primarily related to borrowings. Both types of derivatives are designated as cash flow hedges.

Additionally, the Company primarily uses interest rate swaps as an instrument to manage interest rate risk related to fixed rate borrowings. These derivatives are designated as fair value hedges. The Company uses cross currency interest rate swaps and forward foreign exchange contracts designated as net investment hedges. Additionally, the Company uses forward foreign exchange contracts to offset its exposure to certain foreign currency assets and liabilities. These forward foreign exchange contracts are not designated as hedges and therefore, changes in the fair values of these derivatives are recognized in earnings, thereby offsetting the current earnings effect of the related foreign currency assets and liabilities.

In the fiscal fourth quarter of 2022, the Company entered into forward starting interest rate swaps with notional amounts totaling $2.4 billion in contemplation of hedging interest rate risk associated with long-term financing for the Consumer Health segment separation. These forward starting interest rate swaps are not designated as hedges and therefore, changes in the fair values of these derivatives are recognized in earnings. At the end of the fiscal year 2022, the changes in fair value was not material and therefore not included in the table below.

The Company does not enter into derivative financial instruments for trading or speculative purposes, or that contain credit risk related contingent features. The Company maintains credit support agreements (CSA) with certain derivative counterparties establishing collateral thresholds based on respective credit ratings and netting agreements. As of January 1, 2023, the total amount of cash collateral paid by the Company under the CSA amounted to $0.8 billion net, related to net investment and cash flow hedges. On an ongoing basis, the Company monitors counter-party credit ratings. The Company considers credit non-performance risk to be low, because the Company primarily enters into agreements with commercial institutions that have at least an investment grade credit rating. Refer to the table on significant financial assets and liabilities measured at fair value contained in this footnote for receivables and payables with these commercial institutions. As of January 1, 2023, the Company had notional amounts outstanding for forward foreign exchange contracts, cross currency interest rate swaps and interest rate swaps of $43.3 billion, $36.2 billion and $12.4 billion, respectively. As of January 2, 2022, the Company had notional amounts outstanding for forward foreign exchange contracts, cross currency interest rate swaps and interest rate swaps of $45.8 billion, $37.4 billion and $10.0 billion, respectively.

All derivative instruments are recorded on the balance sheet at fair value. Changes in the fair value of derivatives are recorded each period in current earnings or other comprehensive income, depending on whether the derivative is designated as part of a hedge transaction, and if so, the type of hedge transaction.

The designation as a cash flow hedge is made at the entrance date of the derivative contract. At inception, all derivatives are expected to be highly effective. Foreign exchange contracts designated as cash flow hedges are accounted for under the forward method and all gains/losses associated with these contracts will be recognized in the income statement when the hedged item impacts earnings. Changes in the fair value of these derivatives are recorded in accumulated other comprehensive income until the underlying transaction affects earnings, and are then reclassified to earnings in the same account as the hedged transaction.

Gains and losses associated with interest rate swaps and changes in fair value of hedged debt attributable to changes in interest rates are recorded to interest expense in the period in which they occur. Gains and losses on net investment hedges are accounted through the currency translation account within accumulated other comprehensive income. The portion excluded from effectiveness testing is recorded through interest (income) expense using the spot method. On an ongoing basis, the Company assesses whether each derivative continues to be highly effective in offsetting changes of hedged items. If and when a derivative is no longer expected to be highly effective, hedge accounting is discontinued.

The Company designated its Euro denominated notes issued in May 2016 with due dates ranging from 2022 to 2035 as a net investment hedge of the Company's investments in certain of its international subsidiaries that use the Euro as their functional currency in order to reduce the volatility caused by changes in exchange rates.

As of January 1, 2023, the balance of deferred net loss on derivatives included in accumulated other comprehensive income was $230 million after-tax. For additional information, see the Consolidated Statements of Comprehensive Income and Note 13. The Company expects that substantially all of the amounts related to forward foreign exchange contracts will be reclassified into earnings over the next 12 months as a result of transactions that are expected to occur over that period. The maximum length of time over which the Company is hedging transaction exposure is 18 months, excluding interest rate contracts and net investment hedges. The amount ultimately realized in earnings may differ as foreign exchange rates change. Realized gains and losses are ultimately determined by actual exchange rates at maturity of the derivative.

The following table is a summary of the activity related to derivatives and hedges for the fiscal years ended January 1, 2023 and January 2, 2022, net of tax:

	January 1, 2023					January 2, 2022				
(Dollars in Millions)	Sales	Cost of Products Sold	R&D Expense	Interest (Income) Expense	Other (Income) Expense	Sales	Cost of Products Sold	R&D Expense	Interest (Income) Expense	Other (Income) Expense
The effects of fair value, net investment and cash flow hedging:										
Gain (Loss) on fair value hedging relationship:										
Interest rate swaps contracts:										
Hedged items	$ —	—	—	(1,098)	—	—	—	—	(109)	—
Derivatives designated as hedging instruments	—	—	—	1,098	—	—	—	—	109	—
Gain (Loss) on net investment hedging relationship:										
Cross currency interest rate swaps contracts:										
Amount of gain or (loss) recognized in income on derivative amount excluded from effectiveness testing	$ —	—	—	140	—	—	—	—	174	—
Amount of gain or (loss) recognized in AOCI	—	—	—	140	—	—	—	—	174	—
Gain (Loss) on cash flow hedging relationship:										
Forward foreign exchange contracts:										
Amount of gain or (loss) reclassified from AOCI into income	(72)	(271)	149	—	(23)	17	119	30	—	47
Amount of gain or (loss) recognized in AOCI	5	319	61	—	(113)	(94)	(557)	123	—	146
Cross currency interest rate swaps contracts:										
Amount of gain or (loss) reclassified from AOCI into income	—	—	—	425	—	—	—	—	402	—
Amount of gain or (loss) recognized in AOCI	$ —	—	—	42	—	—	—	—	9	—

As of January 1, 2023 and January 2, 2022, the following amounts were recorded on the consolidated balance sheet related to cumulative basis adjustment for fair value hedges

Line item in the Consolidated Balance Sheet in which the hedged item is included	**Carrying Amount of the Hedged Liability**		**Cumulative Amount of Fair Value Hedging Adjustment Included in the Carrying Amount of the Hedged Liability**	
(Dollars in Millions)	January 1, 2023	January 2, 2022	January 1, 2023	January 2, 2022
Long-term Debt	$ 8,665	$ 9,793	$ (1,435)	$ (142)

The following table is the effect of derivatives not designated as hedging instrument for the fiscal years ended January 1, 2023 and January 2, 2022:

(Dollars in Millions)	Location of Gain /(Loss) Recognized in Income on Derivative	Gain/(Loss) Recognized In Income on Derivative	
Derivatives Not Designated as Hedging Instruments		January 1, 2023	January 2, 2022
Foreign Exchange Contracts	Other (income) expense	$ 94	(70)

The following table is the effect of net investment hedges for the fiscal years ended January 1, 2023 and January 2, 2022:

	Gain/(Loss) Recognized In Accumulated OCI		Location of Gain or (Loss) Reclassified from Accumulated Other Comprehensive Income Into Income	Gain/(Loss) Reclassified From Accumulated OCI Into Income	
(Dollars in Millions)	January 1, 2023	January 2, 2022		January 1, 2023	January 2, 2022
Debt	$ 197	387	Interest (income) expense	—	—
Cross Currency interest rate swaps	$ 766	548	Interest (income) expense	—	—

The Company holds equity investments with readily determinable fair values and equity investments without readily determinable fair values. The Company measures equity investments that do not have readily determinable fair values at cost minus impairment, if any, plus or minus changes resulting from observable price changes in orderly transactions for the identical or a similar investment of the same issuer.

The following table is a summary of the activity related to equity investments for the fiscal years ended January 1, 2023 and January 2, 2022:

	January 2, 2022			January 1, 2023	
(Dollars in Millions)	Carrying Value	Changes in Fair Value Reflected in Net Income[1]	Sales/ Purchases/Other[2]	Carrying Value	Non Current Other Assets
Equity Investments with readily determinable value	$ 1,884	(538)	(770)	576	576
Equity Investments without readily determinable value	$ 500	91	107	698	698

	January 3, 2021			January 2, 2022	
(Dollars in Millions)	Carrying Value	Changes in Fair Value Reflected in Net Income[1]	Sales/ Purchases/Other[2]	Carrying Value	Non Current Other Assets
Equity Investments with readily determinable value	$ 1,481	198	205	1,884	1,884
Equity Investments without readily determinable value	$ 738	394	(632)	500	500

[1] Recorded in Other Income/Expense
[2] Other includes impact of currency

For the fiscal years ended January 1, 2023 and January 2, 2022 for equity investments without readily determinable market values, $51 million and $28 million, respectively, of the changes in fair value reflected in net income were the result of impairments. There were offsetting impacts of $142 million and $422 million, respectively, of changes in the fair value reflected in net income due to changes in observable prices and gains on the disposal of investments. The impact in fiscal year 2021, was driven by the gain on disposal of the Grail investment. In fiscal year 2022, the Company sold all of its equity investments in argenx SE for proceeds of $0.6 billion.

Fair value is the exit price that would be received to sell an asset or paid to transfer a liability. Fair value is a market-based measurement determined using assumptions that market participants would use in pricing an asset or liability. In accordance with ASC 820, a three-level hierarchy to prioritize the inputs used in measuring fair value. The levels within the hierarchy are described below with Level 1 having the highest priority and Level 3 having the lowest.

The fair value of a derivative financial instrument (i.e., forward foreign exchange contracts, interest rate contracts) is the aggregation by currency of all future cash flows discounted to its present value at the prevailing market interest rates and subsequently converted to the U.S. Dollar at the current spot foreign exchange rate. The Company does not believe that fair values of these derivative instruments materially differ from the amounts that could be realized upon settlement or maturity, or that the changes in fair value will have a material effect on the Company's results of operations, cash flows or financial position. The Company also holds equity investments which are classified as Level 1 and debt securities which are classified as Level 2. The Company holds acquisition related contingent liabilities based upon certain regulatory and commercial events, which are classified as Level 3, whose values are determined using discounted cash flow methodologies or similar techniques for which the determination of fair value requires significant judgment or estimations.

The following three levels of inputs are used to measure fair value:

Level 1 — Quoted prices in active markets for identical assets and liabilities.

Level 2 — Significant other observable inputs.

Level 3 — Significant unobservable inputs.

The Company's significant financial assets and liabilities measured at fair value as of the fiscal year ended January 1, 2023 and January 2, 2022 were as follows:

	2022				2021
(Dollars in Millions)	Level 1	Level 2	Level 3	Total	Total [1]
Derivatives designated as hedging instruments:					
Assets:					
Forward foreign exchange contracts	$ —	629	—	629	540
Interest rate contracts [2]	—	1,534	—	1,534	796
Total	$ —	**2,163**	—	**2,163**	**1,336**
Liabilities:					
Forward foreign exchange contracts	—	511	—	511	881
Interest rate contracts [2]	—	2,778	—	2,778	979
Total	$ —	**3,289**	—	**3,289**	**1,860**
Derivatives not designated as hedging instruments:					
Assets:					
Forward foreign exchange contracts	$ —	38	—	38	24
Liabilities:					
Forward foreign exchange contracts	—	68	—	68	28
Available For Sale Other Investments:					
Equity investments[3]	576	—	—	576	1,884
Debt securities[4]	—	10,487	—	10,487	19,727
Other Liabilities					
Contingent Consideration[5]	$		1,120	1,120	533

Gross to Net Derivative Reconciliation	2022	2021
(Dollars in Millions)		
Total Gross Assets	$ 2,201	1,360
Credit Support Agreement (CSA)	(2,176)	(1,285)
Total Net Asset	25	75
Total Gross Liabilities	3,357	1,888
Credit Support Agreement (CSA)	(3,023)	(1,855)
Total Net Liabilities	$ 334	33

Summarized information about changes in liabilities for contingent consideration is as follows:

	2022	2021	2020
(Dollars in Millions)			
Beginning Balance	$ 533	633	1,715
Changes in estimated fair value [6]	(194)	(52)	(1,089)
Additions [7]	792	—	106
Payments	(11)	(48)	(99)
Ending Balance	$ 1,120	533	633

(1) 2021 assets and liabilities are all classified as Level 2 with the exception of equity investments of $1,884 million, which are classified as Level 1 and contingent consideration of $533 million, classified as Level 3.

(2) Includes cross currency interest rate swaps and interest rate swaps.

(3) Classified as non-current other assets.
(4) Classified as cash equivalents and current marketable securities.
(5) Includes $1,116 million, $520 million and $594 million, classified as non-current other liabilities as of January 1, 2023, January 2, 2022 and January 3, 2021, respectively. Includes $4 million, $13 million and $39 million classified as current liabilities as of January 1, 2023, January 2, 2022 and January 3, 2021, respectively.
(6) Ongoing fair value adjustment amounts are recorded primarily in Research and Development expense. The Company recorded a contingent consideration reversal of $1,148 million in 2020 related to the timing of certain developmental milestones associated with the Auris Health acquisition. The reversal of the contingent consideration was recorded in Other income and expense.
(7) In fiscal year 2022, the Company recorded $704 million of contingent consideration related to Abiomed.

See Notes 2 and 7 for financial assets and liabilities held at carrying amount on the Consolidated Balance Sheet.

7. Borrowings

The components of long-term debt are as follows:

(Dollars in Millions)	2022	Effective Rate %	2021	Effective Rate %
0.250% Notes due 2022 (1B Euro 1.1311)[3]	$ —	— %	$ 1,131 [3]	0.26 %

Total long-term debt	**$ 26,888**		**$ 29,985**	

(1) Weighted average effective rate.
(2) Translation rate at January 1, 2023.
(3) Translation rate at January 2, 2022.

(4) The excess of the carrying value over the fair value of debt was $1.6 billion at the end of fiscal year 2022 and the excess of the fair value over the carrying value of debt was $3.2 billion at the end of fiscal year 2021.

Fair value of the long-term debt was estimated using market prices, which were corroborated by quoted broker prices and significant other observable inputs.

The Company has access to substantial sources of funds at numerous banks worldwide. In September 2022, the Company secured a new 364-day Credit Facility of $10 billion, which expires on September 7, 2023. In November 2022, the Company secured an additional 364-day Credit Facility of $10 billion, which expires on November 21, 2023. Interest charged on borrowings under the credit line agreement is based on either the Term SOFR Reference Rate or other applicable market rates as allowed under the terms of the agreement, plus applicable margins. Commitment fees under the agreements are not material.

Throughout fiscal years 2022 and 2021, the Company continued to have access to liquidity through the commercial paper market. Short-term borrowings and the current portion of long-term debt amounted to approximately $12.8 billion and $3.8 billion at the end of fiscal years 2022 and 2021, respectively. The current portion of the long term debt was $1.6 billion and $2.1 billion in 2022 and 2021, respectively, and the remainder is commercial paper and local borrowing by international subsidiaries.

The current debt balance as of January 1, 2023 includes $11.2 billion of commercial paper which has a weighted average interest rate of 4.23% and a weighted average maturity of approximately two months.

Aggregate maturities of long-term debt obligations commencing in 2023 are:

(Dollars in Millions)					
2023	**2024**	**2025**	**2026**	**2027**	**After 2026**
$1,551	1,392	1,667	1,996	2,271	19,562

8. Income Taxes

The provision for taxes on income consists of:

(Dollars in Millions)	2022	2021	2020
Currently payable:			
U.S. taxes	$ 2,378	1,525	1,026
International taxes	3,069	2,452	1,898
Total currently payable	5,447	3,977	2,924
Deferred:

International taxes	418	(2,662)	(1,065)
Total deferred	(1,663)	(2,079)	(1,141)
Provision for taxes on income	**$ 3,784**	**1,898**	**1,783**

A comparison of income tax expense at the U.S. statutory rate of 21% in fiscal years 2022, 2021 and 2020, to the Company's effective tax rate is as follows:

(Dollars in Millions)	2022	2021	2020
U.S.	$ 5,369	6,110	4,312
International	16,356	16,666	12,185
Earnings before taxes on income:	$ 21,725	22,776	16,497
Tax rates:			
U.S. statutory rate	21.0 %	21.0	21.0
International operations [1]	(4.5)	(16.4)	(9.9)
Consumer health separation	2.2	—	—
U.S. taxes on international income [2]	(1.9)	6.7	2.7
Tax benefits from loss on capital assets	—	(1.3)	(1.2)
Tax benefits on share-based compensation	(1.3)	(1.0)	(1.5)
All other [3]	1.9	(0.7)	(0.3)
Effective Rate	17.4 %	8.3	10.8

[1] For all periods presented the Company has subsidiaries operating in Puerto Rico under various tax incentives. International operations reflect the impacts of operations in jurisdictions with statutory tax rates different than the U.S., particularly Ireland, Switzerland and Puerto Rico, which is a favorable impact on the effective tax rate as compared with the U.S. statutory rate. The 2021 amounts include the reorganization of international subsidiaries; the 2020 amounts include the impact of the new tax legislation enactment in Switzerland, both of which are further described below.

[2] Includes the impact of the GILTI tax, the Foreign-Derived Intangible Income deduction and other foreign income that is taxable under the U.S. tax code. The 2022 amount includes the impact of certain provisions of the 2017 TCJA that became effective in fiscal 2022. The 2021 amounts include the reorganization of international subsidiaries; the 2020 amounts include the impact of the new tax legislation enactment in Switzerland, both of which are further described below.

[3] Certain prior year amounts have been reclassified to conform to current year presentation.

The fiscal year 2022 effective tax rate increased 9.1% as compared to the fiscal year 2021 effective tax rate. As part of the planned separation of the Company's Consumer Health business, the Company has recognized approximately $0.5 billion in net incremental tax costs in fiscal year 2022, which increased the 2022 effective tax rate by approximately 2.2%.

Additionally, the Company recorded certain non-recurring favorable tax items in fiscal year 2021 which resulted in an unfavorable impact to the Company's fiscal 2022 effective tax rate when compared to the prior fiscal year. These items are described below. The Company's 2022 tax rate also benefited from certain provisions of the Tax Cuts and Jobs Act of 2017 that became effective in fiscal 2022, the impairment of bermekimab for AD and HS IPR&D (for further information see Note 5 of the 2022 10-K Consolidated Financial Statements) and changes in the fair value of securities in the Company's investment portfolio, both recorded at the U.S. statutory rate.

The fiscal year 2021 tax rate decreased by 2.5% compared to the fiscal year 2020 tax rate, which was primarily driven by the following items. In fiscal year 2021, the Company reorganized the ownership structure of certain wholly-owned international subsidiaries. As part of this reorganization, the Company increased the tax basis of certain assets to fair value in accordance with applicable local regulations. The net impact of this restructuring was approximately $0.6 billion net benefit or 2.7% benefit to the Company's annual effective tax rate, comprised of the following items:

- approximately $2.3 billion of local deferred tax assets to record the remeasurement of the tax basis of these assets to fair value, this benefit has been reflected as "International Operations" on the Company's effective tax rate reconciliation.
- approximately $1.7 billion of U.S. deferred tax expense relating to the GILTI deferred tax liability resulting from the remeasurement of these deferred tax assets. This expense has been reflected as "U.S. tax on international income" on the Company's effective tax rate reconciliation.

Also, in the fiscal fourth quarter of 2021, the Company recognized a loss on certain U.S. affiliates related to the previously impaired book value of certain intangibles, which reduced the 2021 tax rate by approximately 1.3% which is reflected as a "Tax benefits from loss on capital assets" on the effective tax rate reconciliation. Additionally other fiscal 2021 impacts to the rate were primarily driven by litigation and acquisition related items as follows:

- the Company accrued additional legal expenses, of approximately $1.6 billion for talc at an effective tax rate of 23.5% and $0.8 billion for Risperdal Gynecomastia settlements at an effective tax rate of 16.4% (See Note 19 to the Consolidated Financial Statements for more details).
- the Company recorded a partial IPR&D charge of $0.9 billion for the Ottava intangible asset (acquired with the Auris Health acquisition in 2019) at an effective rate of 22.4%.

In fiscal year 2019, Switzerland enacted the Federal Act on Tax Reform and AHV Financing (TRAF) and became effective for fiscal year 2020. The Federal transitional provisions of TRAF allow companies, under certain conditions, to adjust the tax basis in certain assets to fair value (i.e., "step-up") to be depreciated and amortized resulting in an incremental Swiss tax deduction over the transitional period.

TRAF also provides for parameters which enable the Swiss cantons to establish localized tax rates and regulations for companies. The new cantonal tax parameters include favorable tax benefits for patents and additional research and development tax deductions. The cantonal transitional provisions of TRAF allowed companies to elect either 1) tax basis step-up similar to the Federal transition benefit or 2) alternative statutory tax rate for a period not to exceed 5 years. The Company has operations located in various Swiss cantons.

During the fiscal year 2020, the final canton where the Company maintains significant operations enacted TRAF legislation. Additionally, the Company received rulings from the Swiss Federal and cantonal tax authorities in the remaining jurisdictions where it has significant operations. These rulings resulted in the Company revising its estimate on the tax basis adjustment (i.e., "step-up") for its assets and as a result, the Company recorded additional deferred tax benefits in 2020. The Company recognized a net benefit in the fiscal year 2020 for Swiss Tax Reform of approximately $0.4 billion or 2.6% benefit to the Company's annual effective tax rate, comprised of the following items:

- approximately $0.3 billion tax benefit relating to the remeasurement of Swiss deferred tax assets and liabilities for the change in the Federal and cantonal tax rates, where enactment occurred in the fiscal year 2020; this benefit has been reflected as "International Operations" on the Company's effective tax rate reconciliation.
- a $450 million deferred tax asset related to the estimated value of a Federal tax basis step-up of the Company's Swiss subsidiaries' assets as described above; this benefit has been reflected as "International Operations" on the Company's effective tax rate reconciliation.
- approximately $0.3 billion of U.S. deferred tax expense relating to the GILTI deferred tax liability resulting from the remeasurement of the Swiss deferred tax assets and liabilities in the fiscal year 2020. This benefit has been reflected as "U.S. tax on international income" on the Company's effective tax rate reconciliation.

The Company does not expect to receive future rulings regarding the transitional provisions of TRAF.

Also, in the fiscal year 2020, the Company recognized a capital loss on certain U.S. affiliates related to the previously impaired book value of certain intangibles, which reduced the 2020 tax rate by approximately 1.2% which is reflected as a "Tax benefits from loss on capital assets" on the effective tax rate reconciliation. In addition, in the fiscal year 2020, the Company had lower income in higher tax jurisdictions, primarily driven by:

- the impact of the accrual of litigation costs related to talc for $4.0 billion which reduced the U.S. earnings before taxes at an effective tax rate of 23.5%;
- the accrual of additional legal costs, including an additional $1.0 billion associated with a revised agreement in principle to settle opioid litigation at an effective tax rate of 21.4%

The Company also reduced the contingent consideration liability related to the Auris Health acquisition in 2019 and reversed some of its unrecognized tax benefits due to the completion of several years of tax examinations in certain jurisdictions during the fiscal year 2020.

Temporary differences and carryforwards at the end of fiscal years 2022 and 2021 were as follows:

	2022 Deferred Tax		2021 Deferred Tax[1]	
(Dollars in Millions)	Asset	Liability	Asset	Liability
Employee related obligations	$ 725		1,244	
Stock based compensation	687		679	
Depreciation of property, plant and equipment		(858)		(876)
Goodwill and intangibles		(4,271) [3]		(2,659) [2]
R&D capitalized for tax	2,611		1,664	
Reserves & liabilities	2,761		2,882	
Income reported for tax purposes	2,045		2,566	
Net realizable operating loss carryforwards[4]	1,260		1,720	
Undistributed foreign earnings	1,565	(1,693)	1,015	(1,461)
Global intangible low-taxed income		(3,547)		(4,853)
Miscellaneous international	1,053	(65)	870	(39)
Miscellaneous U.S.	476			(16)
Total deferred income taxes	**$ 13,183**	**(10,434)**	**12,640**	**(9,904)**

[1] Certain prior year amounts have been reclassified to conform to current year presentation.
[2] Amount is inclusive of the $2.3 billion deferred tax asset established as part of the reorganized ownership structure of certain wholly-owned international subsidiaries, as previously described.
[3] Amount is inclusive of the $1.8 billion deferred tax liability due to the acquisition of Abiomed.
[4] Net of valuation allowances of $0.9 billion in both 2022 and 2021.

The Company has wholly-owned international subsidiaries that have cumulative net losses. The Company believes that it is more likely than not that these subsidiaries will generate future taxable income sufficient to utilize these deferred tax assets. However, in certain jurisdictions, valuation allowances have been recorded against deferred tax assets for loss carryforwards that are not more likely than not to be realized.

The following table summarizes the activity related to unrecognized tax benefits:

(Dollars in Millions)	2022	2021	2020
Beginning of year	$ 3,323	3,373	3,853
Increases related to current year tax positions	523	242	265
Increases related to prior period tax positions	143	23	668
Decreases related to prior period tax positions	(148)	(128)	(551)
Settlements	(1)	(187)	(839)
Lapse of statute of limitations	(11)	—	(23)
End of year	**$ 3,829**	**3,323**	**3,373**

The unrecognized tax benefits of $3.8 billion at January 1, 2023, if recognized, would affect the Company's annual effective tax rate. The Company conducts business and files tax returns in numerous countries and currently has tax audits in progress with a number of tax authorities. With respect to the United States, the IRS has completed its audit for the tax years through 2012 and is currently auditing tax years 2013 through 2016. In the fiscal year 2020, the Company made its final payments for approximately $0.7 billion to the U.S. Treasury related to the final settlement of 2010-2012 tax audit liability.

In other major jurisdictions where the Company conducts business, the years that remain open to tax audits go back to the year 2008. The Company believes it is possible that some tax audits may be completed over the next twelve months by taxing authorities in some jurisdictions, including in the United States. However, the Company is not able to provide a reasonably reliable estimate of the timing of any other future tax payments or change in uncertain tax positions, if any.

The Company classifies liabilities for unrecognized tax benefits and related interest and penalties as long-term liabilities. Interest expense and penalties related to unrecognized tax benefits are classified as income tax expense. The Company recognized after tax interest expense of $139 million, $44 million and $32 million in fiscal years 2022, 2021 and 2020, respectively. The total amount of accrued interest was $651 million and $512 million in fiscal years 2022 and 2021, respectively.

9. Employee Related Obligations

At the end of fiscal 2022 and fiscal 2021, employee related obligations recorded on the Consolidated Balance Sheets were:

(Dollars in Millions)		2022	2021
Pension benefits	$	2,698	4,088
Postretirement benefits		1,734	2,069
Postemployment benefits		2,832	3,117
Deferred compensation		100	181
Total employee obligations		7,364	9,455
Less current benefits payable		597	557
Employee related obligations — non-current	**$**	**6,767**	**8,898**

Prepaid employee related obligations of $4,581 million and $4,436 million for 2022 and 2021, respectively, are included in Other assets on the Consolidated Balance Sheets.

10. Pensions and Other Benefit Plans

The Company sponsors various retirement and pension plans, including defined benefit, defined contribution and termination indemnity plans, which cover most employees worldwide. The Company also provides post-retirement benefits, primarily healthcare, to all eligible U.S. retired employees and their dependents.

Many international employees are covered by government-sponsored programs and the cost to the Company is not significant.

In the U.S, non-union pension benefits for employees hired before January 1, 2015 are primarily based on the employee's compensation during the last five years before retirement and the number of years of service (the Final Average Pay formula). U.S. pension benefits for employees hired after 2014, are calculated using a different formula based on employee compensation over total years of service (the Retirement Value formula).

In January 2021, the Company announced that, effective on January 1, 2026, all eligible U.S. non-union employees, regardless of hire date, will earn benefits under the Retirement Value formula. This amendment does not affect the benefits accrued under the Final Average Pay formula for service before January 1, 2026.

International subsidiaries have plans under which funds are deposited with trustees, annuities are purchased under group contracts, or reserves are provided.

The Company does not fund retiree healthcare benefits in advance and has the right to modify these plans in the future.

In 2022 and 2021 the Company used December 31, 2022 and December 31, 2021, respectively, as the measurement date for all U.S. and international retirement and other benefit plans.

Net periodic benefit costs for the Company's defined benefit retirement plans and other benefit plans for 2022, 2021 and 2020 include the following components:

	Retirement Plans			Other Benefit Plans		
(Dollars in Millions)	2022	2021	2020	2022	2021	2020
Service cost	$ 1,327	1,421	1,380	320	309	287
Interest cost	911	770	955	105	81	133
Expected return on plan assets	(2,757)	(2,645)	(2,461)	(8)	(7)	(7)
Amortization of prior service cost	(184)	(181)	2	(5)	(31)	(31)
Recognized actuarial losses (gains)	655	1,257	891	121	151	142
Curtailments and settlements	1	1	23	—	—	—
Net periodic benefit cost (credit)	**$ (47)**	**623**	**790**	**533**	**503**	**524**

The service cost component of net periodic benefit cost is presented in the same line items on the Consolidated Statement of Earnings where other employee compensation costs are reported, including Cost of products sold, Research and development expense, and Selling, marketing and administrative expenses. All other components of net periodic benefit cost are presented as part of Other (income) expense, net on the Consolidated Statement of Earnings.

Unrecognized gains and losses for the U.S. pension plans are amortized over the average remaining future service for each plan. For plans with no active employees, they are amortized over the average life expectancy. The amortization of gains and losses for the other U.S. benefit plans is determined by using a 10% corridor of the greater of the market value of assets or the accumulated postretirement benefit obligation. Total unamortized gains and losses in excess of the corridor are amortized over the average remaining future service.

Prior service costs/benefits for the U.S. pension plans are amortized over the average remaining future service of plan participants at the time of the plan amendment. Prior service cost/benefit for the other U.S. benefit plans is amortized over the average remaining service to full eligibility age of plan participants at the time of the plan amendment.

The following table represents the weighted-average actuarial assumptions:

	Retirement Plans			Other Benefit Plans		
Worldwide Benefit Plans	**2022**	**2021**	**2020**	**2022**	**2021**	**2020**
Net Periodic Benefit Cost						
Service cost discount rate	2.46 %	2.14	2.82	2.59	2.09	3.04
Interest cost discount rate	2.80 %	2.34	3.13	2.64	2.33	3.08
Rate of increase in compensation levels	4.02 %	4.01	4.00	4.21	4.25	4.25
Expected long-term rate of return on plan assets	7.25 %	7.71	8.12			
Benefit Obligation						
Discount rate	5.01 %	2.49	2.14	5.42	2.68	2.23
Rate of increase in compensation levels	4.00 %	4.01	4.00	4.21	4.21	4.27

The Company’s discount rates are determined by considering current yield curves representing high quality, long-term fixed income instruments. The resulting discount rates are consistent with the duration of plan liabilities. The Company's methodology in determining service and interest cost uses duration specific spot rates along that yield curve to the plans' liability cash flows.

The expected rates of return on plan asset assumptions represent the Company's assessment of long-term returns on diversified investment portfolios globally. The assessment is determined using projections from external financial sources, long-term historical averages, actual returns by asset class and the various asset class allocations by market.

The following table displays the assumed healthcare cost trend rates, for all individuals:

Healthcare Plans	**2022**	**2021**
Healthcare cost trend rate assumed for next year	5.99 %	5.33 %
Rate to which the cost trend rate is assumed to decline (ultimate trend)	4.01 %	3.73 %
Year the rate reaches the ultimate trend rate	2047	2046

The following table sets forth information related to the benefit obligation and the fair value of plan assets at fiscal year-end 2022 and 2021 for the Company's defined benefit retirement plans and other post-retirement plans:

	Retirement Plans		Other Benefit Plans	
(Dollars in Millions)	**2022**	**2021**	**2022**	**2021**
Change in Benefit Obligation

The Company plans to continue to fund its U.S. Qualified Plans to comply with the Pension Protection Act of 2006. International Plans are funded in accordance with local regulations. Additional discretionary contributions are made when deemed appropriate to meet the long-term obligations of the plans. For certain plans, funding is not a common practice, as funding provides no economic benefit. Consequently, the Company has several pension plans that are not funded.

In 2022, the Company contributed $119 million and $151 million to its U.S. and international pension plans, respectively.

The following table displays the funded status of the Company's U.S. Qualified & Non-Qualified pension plans and international funded and unfunded pension plans at December 31, 2022 and December 31, 2021, respectively:

	U.S. Plans				International Plans			
	Qualified Plans		Non-Qualified Plans		Funded Plans		Unfunded Plans	
(Dollars in Millions)	**2022**	**2021**	**2022**	**2021**	**2022**	**2021**	**2022**	**2021**
Plan Assets	$ 20,937	27,944	—	—	10,577	13,986	—	—
Projected Benefit Obligation	18,394	25,041	1,937	2,703	9,024	13,428	276	410
Accumulated Benefit Obligation	17,696	23,985	1,872	2,479	8,202	12,212	253	373
Over (Under) Funded Status								
Projected Benefit Obligation	$ 2,543	2,903	(1,937)	(2,703)	1,553	558	(276)	(410)
Accumulated Benefit Obligation	3,241	3,959	(1,872)	(2,479)	2,375	1,774	(253)	(373)

Plans with accumulated benefit obligations in excess of plan assets have an accumulated benefit obligation, projected benefit obligation and plan assets of $2.9 billion, $2.9 billion and $0.3 billion, respectively, at the end of 2022, and $3.9 billion, $4.2 billion and $0.3 billion, respectively, at the end of 2021.

The following table displays the projected future benefit payments from the Company's retirement and other benefit plans:

(Dollars in Millions)	2023	2024	2025	2026	2027	2028-2032
Projected future benefit payments						
Retirement plans	$ 1,445	1,457	1,532	1,609	1,708	10,034
Other benefit plans	$ 471	485	433	447	462	2,539

The following table displays the projected future minimum contributions to the unfunded retirement plans. These amounts do not include any discretionary contributions that the Company may elect to make in the future.

(Dollars in Millions)	2023	2024	2025	2026	2027	2028-2032
Projected future contributions	$ 123	128	136	141	146	816

Each pension plan is overseen by a local committee or board that is responsible for the overall administration and investment of the pension plans. In determining investment policies, strategies and goals, each committee or board considers factors including, local pension rules and regulations; local tax regulations; availability of investment vehicles (separate accounts, commingled accounts, insurance funds, etc.); funded status of the plans; ratio of actives to retirees; duration of liabilities; and other relevant factors including: diversification, liquidity of local markets and liquidity of base currency. A majority of the Company's pension funds are open to new entrants and are expected to be on-going plans. Permitted investments are primarily liquid and/or listed, with little reliance on illiquid and non-traditional investments such as hedge funds.

The Company's retirement plan asset allocation at the end of 2022 and 2021 and target allocations for 2023 are as follows:

	Percent of Plan Assets		Target Allocation
	2022	2021	2023
Worldwide Retirement Plans			
Equity securities	62 %	65 %	61 %
Debt securities	38	35	39
Total plan assets	**100 %**	**100 %**	**100 %**

Determination of Fair Value of Plan Assets

The Plan has an established and well-documented process for determining fair values. Fair value is based upon quoted market prices, where available. If listed prices or quotes are not available, fair value is based upon models that primarily use, as inputs, market-based or independently sourced market parameters, including yield curves, interest rates, volatilities, equity or debt prices, foreign exchange rates and credit curves.

While the Plan believes its valuation methods are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date.

Valuation Hierarchy

The authoritative literature establishes a three-level hierarchy to prioritize the inputs used in measuring fair value. The levels within the hierarchy are described in the table below with Level 1 having the highest priority and Level 3 having the lowest.

The Net Asset Value (NAV) is based on the value of the underlying assets owned by the fund, minus its liabilities, and then divided by the number of shares outstanding.

A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement.

Following is a description of the valuation methodologies used for the investments measured at fair value.

- *Short-term investment funds* — Cash and quoted short-term instruments are valued at the closing price or the amount held on deposit by the custodian bank. Other investments are through investment vehicles valued using the NAV provided by the administrator of the fund. The NAV is a quoted price in a market that is not active and classified as Level 2.
- *Government and agency securities* — A limited number of these investments are valued at the closing price reported on the major market on which the individual securities are traded. Where quoted prices are available in an active market, the investments are classified within Level 1 of the valuation hierarchy. If quoted market prices are not available for the specific security, then fair values are estimated by using pricing models, quoted prices of securities with similar characteristics or discounted cash flows. When quoted market prices for a security are not available in an active market, they are classified as Level 2.
- *Debt instruments* — A limited number of these investments are valued at the closing price reported on the major market on which the individual securities are traded. Where quoted prices are available in an active market, the investments are classified as Level 1. If quoted market prices are not available for the specific security, then fair values are estimated by using pricing models, quoted prices of securities with similar characteristics or discounted cash flows and are classified as Level 2. Level 3 debt instruments are priced based on unobservable inputs.
- *Equity securities* — Equity securities are valued at the closing price reported on the major market on which the individual securities are traded. Substantially all equity securities are classified within Level 1 of the valuation hierarchy.
- *Commingled funds* — These investment vehicles are valued using the NAV provided by the fund administrator. Assets in the Level 2 category have a quoted market price.

- *Other assets* — Other assets are represented primarily by limited partnerships. These investment vehicles are valued using the NAV provided by the fund administrator. Other assets that are exchange listed and actively traded are classified as Level 1, while inactively traded assets are classified as Level 2.

The following table sets forth the Retirement Plans' investments measured at fair value as of December 31, 2022 and December 31, 2021:

	Quoted Prices in Active Markets for Identical Assets (Level 1)		Significant Other Observable Inputs (Level 2)		Significant Unobservable Inputs[1] (Level 3)		Investments Measured at Net Asset Value		Total Assets	
(Dollars in Millions)	**2022**	**2021**	**2022**	**2021**	**2022**	**2021**	**2022**	**2021**	**2022**	**2021**
Short-term investment funds	$ 33	102	13	1,033	—	—	—	—	46	1,135

Equity securities	8,846	14,107	2	2	—	—	—	—	8,848	14,109
Commingled funds	—	—	4,362	5,496	56	105	6,106	8,708	10,524	14,309
Other assets	—	—	33	34	13	15	2,506	1,807	2,552	1,856
Investments at fair value	**$ 8,879**	**14,209**	**13,954**	**17,086**	**69**	**120**	**8,612**	**10,515**	**31,514**	**41,930**

[1] The activity for the Level 3 assets is not significant for all years presented.

The Company's Other Benefit Plans are unfunded except for U.S. commingled funds (Level 2) of $78 million and $102 million at December 31, 2022 and December 31, 2021, respectively.

The fair value of Johnson & Johnson Common Stock directly held in plan assets was $21 million (0.1% of total plan assets) at December 31, 2022 and $385 million (0.9% of total plan assets) at December 31, 2021.

11. Savings Plan

The Company has voluntary 401(k) savings plans designed to enhance the existing retirement programs covering eligible employees. The Company matches a percentage of each employee's contributions consistent with the provisions of the plan for which he/she is eligible. Total Company matching contributions to the plans were $275 million, $256 million and $243 million in fiscal years 2022, 2021 and 2020, respectively.

12. Capital and Treasury Stock

Changes in treasury stock were:

(Amounts in Millions Except Treasury Stock Shares in Thousands)	Treasury Stock Shares	Treasury Stock Amount
Balance at December 29, 2019	487,336	$ 38,417
Employee compensation and stock option plans	(21,765)	(3,148)
Repurchase of common stock	21,760	3,221
Balance at January 3, 2021	487,331	38,490
Employee compensation and stock option plans	(17,399)	(2,847)
Repurchase of common stock	20,946	3,456
Balance at January 2, 2022	490,878	39,099
Employee compensation and stock option plans	(20,007)	(3,440)
Repurchase of common stock	35,375	6,035
Balance at January 1, 2023	506,246	$ 41,694

Aggregate shares of common stock issued were approximately 3,119,843,000 shares at the end of fiscal years 2022, 2021 and 2020.

Cash dividends paid were $4.45 per share in fiscal year 2022, compared with dividends of $4.19 per share in fiscal year 2021, and $3.98 per share in fiscal year 2020.

On January 3, 2023, the Board of Directors declared a regular cash dividend of $1.13 per share, payable on March 7, 2023 to shareholders of record as of February 21, 2023.

On September 14, 2022, the Company announced that its Board of Directors approved a share repurchase program, authorizing the Company to purchase up to $5.0 billion of the Company's shares of common stock. Share repurchases may be made at management's discretion from time to time on the open market or through privately negotiated transactions. The repurchase program has no time limit and may be suspended for periods or discontinued at any time. Through January 1, 2023, approximately $2.5 billion has been repurchased under the program.

13. Accumulated Other Comprehensive Income (Loss)

Components of other comprehensive income (loss) consist of the following:

(Dollars in Millions)	Foreign Currency Translation	Gain/(Loss) On Securities	Employee Benefit Plans	Gain/ (Loss) On Derivatives & Hedges	Total Accumulated Other Comprehensive Income (Loss)
December 29, 2019	$ (8,705)	—	(6,891)	(295)	(15,891)
Net 2020 changes	(233)	1	(66)	947	649
January 3, 2021	(8,938)	1	(6,957)	652	(15,242)
Net 2021 changes	(1,079)	(4)	4,255	(988)	2,184
January 2, 2022	(10,017)	(3)	(2,702)	(336)	(13,058)
Net 2022 changes	(1,796)	(24)	1,805	106	91
January 1, 2023	$ (11,813)	(27)	(897)	(230)	(12,967)

Amounts in accumulated other comprehensive income are presented net of the related tax impact. Foreign currency translation is not adjusted for income taxes where it relates to permanent investments in international subsidiaries. For additional details on comprehensive income see the Consolidated Statements of Comprehensive Income.

Details on reclassifications out of Accumulated Other Comprehensive Income:

Gain/(Loss) On Securities - reclassifications released to Other (income) expense, net.

Employee Benefit Plans - reclassifications are included in net periodic benefit cost. See Note 10 for additional details.

Gain/(Loss) On Derivatives & Hedges - reclassifications to earnings are recorded in the same account as the hedged transaction. See Note 6 for additional details.

14. International Currency Translation

For translation of its subsidiaries operating in non-U.S. Dollar currencies, the Company has determined that the local currencies of its international subsidiaries are the functional currencies except those in highly inflationary economies, which are defined as those which have had compound cumulative rates of inflation of 100% or more during the past three years, or where a substantial portion of its cash flows are not in the local currency. For the majority of the Company's subsidiaries the local currency is the functional currency.

In consolidating international subsidiaries, balance sheet currency effects are recorded as a component of accumulated other comprehensive income. The other current and non-current assets line within the Statement of Cash flows includes the impact of foreign currency translation. This equity account includes the results of translating certain balance sheet assets and liabilities at current exchange rates and some accounts at historical rates, except for those located in highly inflationary economies, (Argentina and Venezuela). Beginning in the fiscal second quarter of 2022, the Company also accounted for operations in Turkey as highly inflationary. The translation of balance sheet accounts for highly inflationary economies are reflected in the operating results.

A rollforward of the changes during fiscal years 2022, 2021 and 2020 for foreign currency translation adjustments is included in Note 13.

Net currency transaction gains and losses included in Other (income) expense were losses of $328 million, $236 million and $209 million in fiscal years 2022, 2021 and 2020, respectively.

15. Earnings Per Share

The following is a reconciliation of basic net earnings per share to diluted net earnings per share for the fiscal years ended January 1, 2023, January 2, 2022 and January 3, 2021:

(In Millions Except Per Share Amounts)	2022	2021	2020
Basic net earnings per share	$ 6.83	7.93	5.59
Average shares outstanding — basic	2,625.2	2,632.1	2,632.8
Potential shares exercisable under stock option plans	140.1	138.0	118.3
Less: shares repurchased under treasury stock method	(101.4)	(96.1)	(80.4)
Adjusted average shares outstanding — diluted	2,663.9	2,674.0	2,670.7
Diluted net earnings per share	$ 6.73	7.81	5.51

The diluted net earnings per share calculation for the fiscal years 2022 and 2021 included all shares related to stock options, as the exercise price of these options was less than the average market value of the Company's stock.

The diluted net earnings per share calculation for fiscal year 2020 excluded 18 million shares related to stock options, as the exercise price of these options was greater than the average market value of the Company's stock.

16. Common Stock, Stock Option Plans and Stock Compensation Agreements

At January 1, 2023, the Company had one stock-based compensation plan. The shares outstanding are for contracts under the Company's 2012 Long-Term Incentive Plan and the 2022 Long-Term Incentive Plan. The 2012 Long-Term Incentive Plan expired on April 26, 2022. All awards (stock options, restricted shares units and performance share units) granted subsequent to that date were under the 2022 Long-Term Incentive Plan. Under the 2022 Long-Term Incentive Plan, the Company may issue up to 150 million shares of common stock, of which up to 110 million shares of common stock may be issued subject to stock options or stock appreciation rights and up to 40 million shares of common stock may be issued subject to full value awards. Awards will generally be counted on a 1-for-1 basis against the share reserve, provided that if more than 40 million full value awards are granted, each full value award in excess of 40 million will be counted on a 5-for-1 basis against the share reserve. Shares available for future grants under the 2022 Long-Term Incentive Plan were 150 million at the end of fiscal year 2022.

The compensation cost that has been charged against income for these plans was $1,138 million, $1,135 million and $1,005 million for fiscal years 2022, 2021 and 2020, respectively. The total income tax benefit recognized in the income statement for share-based compensation costs was $196 million, $218 million and $210 million for fiscal years 2022, 2021 and 2020, respectively. The Company also recognized additional income tax benefits of $282 million, $223 million and $248 million for fiscal years 2022, 2021 and 2020, respectively, for which options were exercised or restricted shares were vested. The total unrecognized compensation cost was $939 million, $862 million and $804 million for fiscal years 2022, 2021 and 2020, respectively. The weighted average period for this cost to be recognized was 1.80 years, 1.78 years and 1.76 years for fiscal years 2022, 2021, and 2020, respectively. Share-based compensation costs capitalized as part of inventory were insignificant in all periods.

The Company settles employee benefit equity issuances with treasury shares. Treasury shares are replenished through market purchases throughout the year for the number of shares used to settle employee benefit equity issuances.

Stock Options

Stock options expire 10 years from the date of grant and vest over service periods that range from 6 months to 4 years. All options are granted at the average of the high and low prices of the Company's Common Stock on the New York Stock Exchange on the date of grant.

The fair value of each option award was estimated on the date of grant using the Black-Scholes option valuation model that uses the assumptions noted in the following table. For 2022, 2021, and 2020 grants, expected volatility represents a blended rate of 10-year weekly historical overall volatility rate, and a 5-week average implied volatility rate based on at-the-money traded Johnson & Johnson options with a life of 2 years. For all grants, historical data is used to determine the expected life of the option. The risk-free rate was based on the U.S. Treasury yield curve in effect at the time of grant.

The average fair value of options granted was $23.23, $20.86 and $16.42, in fiscal years 2022, 2021 and 2020, respectively. The fair value was estimated based on the weighted average assumptions of:

	2022	2021	2020
Risk-free rate	1.98 %	0.83 %	1.47 %
Expected volatility	18.00 %	18.59 %	15.33 %
Expected life (in years)	7.0	7.0	7.0
Expected dividend yield	2.70 %	2.50 %	2.60 %

A summary of option activity under the Plan as of January 1, 2023, January 2, 2022 and January 3, 2021, and changes during the years ending on those dates is presented below:

(Shares in Thousands)	Outstanding Shares	Weighted Average Exercise Price	Aggregate Intrinsic Value (Dollars in Millions)
Shares at December 29, 2019	111,637	$ 105.63	$ 4,478
Options granted	20,723	151.41	
Options exercised	(16,275)	86.05	
Options canceled/forfeited	(1,835)	137.62	
Shares at January 3, 2021	114,250	116.22	4,703
Options granted	18,525	164.62	
Options exercised	(13,248)	97.48	
Options canceled/forfeited	(2,166)	149.75	
Shares at January 2, 2022	117,361	125.36	5,364
Options granted	19,809	165.89	
Options exercised	(16,310)	100.15	
Options canceled/forfeited	(2,188)	160.56	
Shares at January 1, 2023	**118,672**	**$ 134.95**	**$ 4,949**

The total intrinsic value of options exercised was $1,228 million, $919 million and $1,021 million in fiscal years 2022, 2021 and 2020, respectively.

The following table summarizes stock options outstanding and exercisable at January 1, 2023:

(Shares in Thousands)	Outstanding			Exercisable	
Exercise Price Range	Options	Average Life[1]	Weighted Average Exercise Price	Options	Weighted Average Exercise Price
$72.54-$100.48	17,221	1.5	$93.07	17,221	$93.07
$101.87-$115.67	22,039	3.6	$108.78	22,039	$108.78
$129.51-$141.06	24,870	5.7	$130.88	24,228	$130.85
$151.41-$164.62	35,465	7.6	$157.75	150	$156.21
$164.63-$165.89	19,077	9.1	$165.89	23	$165.89
	118,672	**5.8**	**$134.95**	**63,661**	**$113.06**

[1] Average contractual life remaining in years.

Stock options outstanding at January 2, 2022 and January 3, 2021 were 117,361 and an average life of 5.8 years and 114,250 and an average life of 6.0 years, respectively. Stock options exercisable at January 2, 2022 and January 3, 2021 were 62,742 at an average price of $104.42 and 61,289 at an average price of $96.97, respectively.

Restricted Share Units and Performance Share Units

The Company grants restricted share units which vest over service periods that range from 6 months to 3 years. The Company also grants performance share units, which are paid in shares of Johnson & Johnson Common Stock after the end of a three-year performance period. Performance shares were granted with two equally-weighted goals that directly align with or help drive long-term total shareholder return: adjusted operational earnings per share and relative total shareholder return. The number of shares actually earned at the end of the three-year period will vary, based only on actual performance, from 0% to 200% of the target number of performance share units granted.

A summary of the restricted share units and performance share units activity under the Plans as of January 1, 2023 is presented below:

(Shares in Thousands)	Outstanding Restricted Share Units	Outstanding Performance Share Units
Shares at January 2, 2022	14,122	2,312
Granted	5,154	753
Issued	(4,866)	(637)
Canceled/forfeited/adjusted	(794)	(71)
Shares at January 1, 2023	13,616	2,357

The average fair value of the restricted share units granted was $153.67, $152.62 and $139.58 in fiscal years 2022, 2021 and 2020, respectively, using the fair market value at the date of grant. The fair value of restricted share units was discounted for dividends, which are not paid on the restricted share units during the vesting period. The fair value of restricted share units issued was $591 million, $611 million and $650 million in 2022, 2021 and 2020, respectively.

The weighted average fair value of the performance share units granted was $170.46, $179.35 and $160.54 in fiscal years 2022, 2021 and 2020, calculated using the weighted average fair market value for each of the component goals at the date of grant.

The fair values for the sales and earnings per share goals of each performance share unit were estimated on the date of grant using the fair market value of the shares at the time of the award discounted for dividends, which are not paid on the performance share units during the vesting period. The fair value for the relative total shareholder return goal of each performance share unit was estimated on the date of grant using the Monte Carlo valuation model. The fair value of performance share units issued was $94 million, $83 million and $91 million in fiscal years 2022, 2021 and 2020, respectively.

17. Segments of Business* and Geographic Areas

See Note 1 for a description of the segments in which the Company operates.

Export sales are not significant. In fiscal year 2022, the Company utilized three wholesalers distributing products for all three segments that represented approximately 16.5%, 13.0% and 12.0% of the total consolidated revenues. In fiscal year 2021, the Company had three wholesalers distributing products for all three segments that represented approximately 14.0%, 11.0% and 11.0% of the total consolidated revenues. In fiscal year 2020, the Company had three wholesalers distributing products for all three segments that represented approximately 16.0%, 12.0%, and 12.0% of the total consolidated revenues.

(1) Amounts not allocated to segments include interest (income) expense and general corporate (income) expense.

(2) General corporate includes cash, cash equivalents and marketable securities.

(3) Consumer Health includes:

- Litigation expense of $0.2 billion
- A restructuring related charge of $0.1 billion

Pharmaceutical includes:

- One-time COVID-19 Vaccine manufacturing exit related costs of $1.5 billion
- An intangible asset impairment charge of approximately $0.8 billion related to an in-process research and development asset, bermekimab (JnJ-77474462), an investigational drug for the treatment of Atopic Dermatitis (AD) and Hidradenitis Suppurativa (HS) acquired with the acquisition of XBiotech, Inc. in the fiscal year 2020. Additional information regarding efficacy of the AD and HS indications became available which led the Company to the decision to terminate the development of bermekimab for AD and HS
- Litigation expense of $0.1 billion
- Loss of $0.7 billion related to the change in the fair value of securities
- A restructuring related charge of $0.1 billion

MedTech includes:

- Litigation expense of $0.6 billion primarily for pelvic mesh related costs
- A restructuring related charge of $0.3 billion
- Acquisition and integration related costs of $0.3 billion primarily related to the acquisition of Abiomed
- A Medical Device Regulation charge of $0.3 billion

(4) Consumer Health includes:

- Litigation expense of $1.6 billion, primarily talc related costs
- A restructuring related charge of $0.1 billion

Pharmaceutical includes:

- Litigation expense of $0.6 billion, primarily related to Risperdal Gynecomastia
- Divestiture gains of $0.6 billion
- Gains of $0.5 billion related to the change in the fair value of securities
- A restructuring related charge of $0.1 billion

MedTech includes:

- A restructuring related charge of $0.3 billion
- An in-process research and development expense of $0.9 billion related to Ottava
- A Medical Device Regulation charge of $0.2 billion
- Litigation expense of $0.1 billion

(5) Consumer Health includes:

- Litigation expense of $3.9 billion, primarily talc related costs and certain settlements.

Pharmaceutical includes:

- Litigation expense of $0.8 billion, primarily related to the agreement in principle to settle opioid litigation
- A gain of $0.5 billion related to the change in the fair value of securities
- A restructuring related charge of $0.1 billion

MedTech includes:

- A contingent consideration reversal of $1.1 billion related to the timing of certain developmental milestones associated with the Auris Health acquisition.
- Litigation expense of $0.3 billion
- A restructuring related charge of $0.3 billion
- An in-process research and development expense of $0.2 billion
- A Medical Device Regulation charge of $0.1 billion

(6) Long-lived assets include property, plant and equipment, net for fiscal years 2022, and 2021 of $19,803 and $18,962, respectively, and intangible assets and goodwill, net for fiscal years 2022 and 2021 of $93,556 and $81,638, respectively.

18. Acquisitions and Divestitures

During the fiscal year 2022, certain businesses were acquired for $17.7 billion in cash and $1.1 billion of liabilities assumed. These acquisitions were accounted for using the acquisition method and, accordingly, results of operations have been included in the financial statements from their respective dates of acquisition. The excess of purchase price over the estimated fair value of tangible assets acquired amounted to $17.3 billion and has been assigned to identifiable intangible assets, with any residual recorded to goodwill.

The fiscal year 2022 acquisitions primarily included Abiomed, Inc. (Abiomed). The remaining acquisitions were not material.

On December 22, 2022, the Company completed the acquisition of Abiomed, a leading, first-to-market provider of cardiovascular medical technology with a first-in-kind portfolio for the treatment of coronary artery disease and heart failure which also has an extensive innovation pipeline of life-saving technologies. The transaction broadens the Company's position as a growing cardiovascular innovator, advancing the standard of care in heart failure and recovery, one of healthcare's largest areas of unmet need. The transaction was accounted for as a business combination and the results of operations were included in the MedTech segment as of the date of the acquisition. The acquisition was completed through a tender offer for all outstanding shares. The consideration paid in the acquisition consisted of an upfront payment of $380.00 per share in cash, amounting to $17.1 billion, net of cash acquired, as well as a non-tradeable contingent value right ("CVR") entitling the holder to receive up to $35.00 per share in cash (which with respect to the CVRs total approximately $1.6 billion in the aggregate) if certain commercial and clinical milestones are achieved. The corresponding enterprise value (without taking into account the CVRs) of approximately $16.5 billion includes cash, cash equivalents and marketable securities acquired.

The milestones of the CVR consist of:

a. $17.50 per share, payable if net sales for Abiomed products exceeds $3.7 billion during Johnson & Johnson's fiscal second quarter of 2027 through fiscal first quarter of 2028, or if this threshold is not met during this period and is subsequently met during any rolling four quarter period up to the end of Johnson & Johnson's fiscal first quarter of 2029, $8.75 per share;
b. $7.50 per share payable upon FDA premarket application approval of the use of Impella® products in ST-elevated myocardial infarction (STEMI) patients without cardiogenic shock by January 1, 2028; and
c. $10.00 per share payable upon the first publication of a Class I recommendation for the use of Impella® products in high risk PCI or STEMI with or without cardiogenic shock within four years from their respective clinical endpoint publication dates, but in all cases no later than December 31, 2029.

The fair value of the acquisition was allocated to assets acquired of $19.9 billion (net of $0.3 billion cash acquired), primarily to goodwill for $10.9 billion, amortizable intangible assets for $6.6 billion, IPR&D for $1.1 billion, marketable

securities of $0.6 billion and liabilities assumed of $2.8 billion, which includes the fair value of the contingent consideration mentioned above for $0.7 billion and deferred taxes of $1.8 billion. The goodwill is primarily attributable to the commercial acceleration and expansion of the portfolio and is not expected to be deductible for tax purposes. The contingent consideration was recorded in Other Liabilities on the Consolidated Balance Sheet.

As the acquisition occurred in December 2022, the Company is still finalizing the allocation of the purchase price to the individual assets acquired and liabilities assumed. The allocation of the purchase price included in the current period balance sheet is based on the best estimate of management and is preliminary and subject to change. To assist management in the allocation, the Company engaged valuation specialists to prepare appraisals. The Company will finalize the amounts recognized as the information necessary to complete the analysis is obtained. The Company expects to finalize these amounts as soon as possible but no later than one year from the acquisition date.

The amortizable intangible assets were primarily comprised of already in-market products of the Impella® platform with an average weighted life of 14 years. The IPR&D assets were valued for technology programs for unapproved products. The value of the IPR&D was calculated using probability-adjusted cash flow projections discounted for the risk inherent in such projects. The probability of success factor ranged from 52% to 70%. The discount rate applied was 9.5%.

In 2022, the Company recorded acquisition related costs before tax of approximately $0.3 billion, which was recorded in Other (income)/expense.

During fiscal year 2021, the Company did not make any material acquisitions.

During fiscal year 2020, certain businesses were acquired for $7.3 billion in cash and $0.4 billion of liabilities assumed. These acquisitions were accounted for using the acquisition method and, accordingly, results of operations have been included in the financial statements from their respective dates of acquisition.

The excess of purchase price over the estimated fair value of tangible assets acquired amounted to $7.5 billion and has been assigned to identifiable intangible assets, with any residual recorded to goodwill.

The fiscal year 2020 acquisitions primarily included: all rights to the investigational compound bermekimab, which has multiple dermatological indications, along with certain employees from XBiotech Inc. (XBiotech), Momenta Pharmaceuticals, Inc. (Momenta), a company that discovers and develops novel therapies for immune-mediated diseases and the outstanding shares in Verb Surgical Inc., a company with significant robotics and data science capabilities.

During the fiscal first quarter of 2020, the Company completed the acquisition of all rights to the investigational compound bermekimab, which has multiple dermatological indications, along with certain employees from XBiotech Inc., for a purchase price of $0.8 billion. The fair value of the acquisition was allocated primarily to non-amortizable intangible assets, primarily IPR&D, for $0.8 billion applying a probability of success factor that ranged from 20% to 60% to reflect inherent development, regulatory and commercial risk for the different indications. The discount rate applied was approximately 16%. The transaction was accounted for as a business combination and included in the Pharmaceutical segment. In fiscal 2022, the Company recorded an intangible asset impairment charge of approximately $0.8 billion related to this in-process research and development asset.

Additionally, in the fiscal first quarter of 2020, the Company completed the acquisition of all outstanding shares in Verb Surgical Inc., a company with significant robotics and data science capabilities, including those shares previously held by Verily. The transaction was accounted for as a business combination and included in the MedTech segment. The fair value of the acquisition was allocated primarily to non-amortizable intangible assets, primarily IPR&D, for $0.4 billion, goodwill for $0.2 billion, other assets of $0.2 billion and liabilities assumed of $0.3 billion. The fair value of the Company's previously held equity investment in Verb Surgical Inc. was $0.4 billion.

On October 1, 2020, the Company completed the acquisition of Momenta for a purchase price of approximately $6.1 billion, net of cash acquired. The fair value of the acquisition was allocated primarily to non-amortizable intangible assets (IPR&D) of $6.0 billion, goodwill of $1.2 billion, other assets of $0.5 billion and liabilities of $1.6 billion. The assets acquired are intended to address substantial unmet medical need in maternal-fetal disorders, neuro-inflammatory disorders, rheumatology, dermatology and autoimmune hematology. Depending on the asset, probability of success factors ranging from 20% to 77% were used in the fair value calculation to reflect inherent development and regulatory risk of the IPR&D. The discount rate applied was approximately 13%. The goodwill is primarily attributable to synergies expected to arise from the business acquisition and is not expected to be deductible for tax purposes. The transaction was accounted for as a business combination and included in the Pharmaceutical segment.

In accordance with U.S. GAAP standards related to business combinations, and goodwill and other intangible assets, supplemental pro forma information for fiscal years 2022, 2021 and 2020 is not provided, as the impact of the aforementioned acquisitions did not have a material effect on the Company’s results of operations.

Divestitures

During fiscal year 2022, the Company did not make any material divestitures.

During fiscal year 2021, in separate transactions, the Company divested two brands outside the U.S. within the Pharmaceutical segment. The Company recognized a pre-tax gain recorded in Other (income) expense, net, of approximately $0.6 billion.

During fiscal year 2020, the Company sold 11.8 million shares of Idorsia LTD (Idorsia), or its 8.3% ownership in the company at that time. The transaction resulted in gross proceeds of approximately CHF 337 million ($357 million) based on a sales price of CHF 28.55/share and resulted in an immaterial net loss. At the end of fiscal 2020, the Company had rights to approximately 38.7 million shares through a convertible loan with a principal amount of CHF 445 million (due June 2027). During fiscal year 2021, the Company converted CHF 110 million ($120 million) of this loan into approximately 9.6 million shares of Idorsia which were reflected at fair value as of January 2, 2022. During the fiscal third quarter of 2021, the Company's undrawn credit facility with Idorsia was terminated.

19. Legal Proceedings

Johnson & Johnson and certain of its subsidiaries are involved in various lawsuits and claims regarding product liability; intellectual property; commercial; indemnification and other matters; governmental investigations; and other legal proceedings that arise from time to time in the ordinary course of their business.

The Company records accruals for loss contingencies associated with these legal matters when it is probable that a liability will be incurred, and the amount of the loss can be reasonably estimated. As of January 1, 2023, the Company has determined that the liabilities associated with certain litigation matters are probable and can be reasonably estimated. The Company has accrued for these matters and will continue to monitor each related legal issue and adjust accruals as might be warranted based on new information and further developments in accordance with ASC 450-20-25. For these and other litigation and regulatory matters discussed below for which a loss is probable or reasonably possible, the Company is unable to estimate the possible loss or range of loss beyond the amounts accrued. Amounts accrued for legal contingencies often result from a complex series of judgments about future events and uncertainties that rely heavily on estimates and assumptions including timing of related payments. The ability to make such estimates and judgments can be affected by various factors including, among other things, whether damages sought in the proceedings are unsubstantiated or indeterminate; scientific and legal discovery has not commenced or is not complete; proceedings are in early stages; matters present legal uncertainties; there are significant facts in dispute; procedural or jurisdictional issues; the uncertainty and unpredictability of the number of potential claims; ability to achieve comprehensive multi-party settlements; complexity of related cross-claims and counterclaims; and/or there are numerous parties involved. To the extent adverse awards, judgments or verdicts have been rendered against the Company, the Company does not record an accrual until a loss is determined to be probable and can be reasonably estimated.

In the Company’s opinion, based on its examination of these matters, its experience to date and discussions with counsel, the ultimate outcome of legal proceedings, net of liabilities accrued in the Company’s balance sheet, is not expected to have a material adverse effect on the Company’s financial position. However, the resolution of, or increase in accruals for, one or more of these matters in any reporting period may have a material adverse effect on the Company’s results of operations and cash flows for that period.

PRODUCT LIABILITY

The Company and certain of its subsidiaries are involved in numerous product liability claims and lawsuits involving multiple products. Claimants in these cases seek substantial compensatory and, where available, punitive damages. While the Company believes it has substantial defenses, it is not feasible to predict the ultimate outcome of litigation. From time to time, even if it has substantial defenses, the Company considers isolated settlements based on a variety of circumstances. The Company has established accruals for product liability claims and lawsuits in compliance with ASC 450-20 based on currently available information, which in some cases may be limited. The Company accrues an estimate of the legal defense costs needed to defend each matter when those costs are probable and can be reasonably estimated. For certain of these matters, the Company has accrued additional amounts such as estimated costs associated with settlements, damages and other losses. Product liability accruals can represent projected product liability for thousands of claims around the world, each in different litigation environments and with different fact patterns. Changes to the accruals may be required in the future as additional information becomes available.

The most significant of these cases include: the DePuy ASR XL Acetabular System and DePuy ASR Hip Resurfacing System; the PINNACLE Acetabular Cup System; pelvic meshes; RISPERDAL; body powders containing talc, primarily JOHNSON'S Baby Powder; ETHICON PHYSIOMESH Flexible Composite Mesh; ELMIRON; and TYLENOL. As of January 1, 2023, in the United States there were approximately 170 plaintiffs with direct claims in pending lawsuits regarding injuries allegedly due to the DePuy ASR XL Acetabular System and DePuy ASR Hip Resurfacing System; 1,400 with respect to the PINNACLE Acetabular Cup System; 9,000 with respect to pelvic meshes; 1,100 with respect to RISPERDAL; 40,300 with respect to body powders containing talc; 2,100 with respect to ETHICON PHYSIOMESH Flexible Composite Mesh; 2,000 with respect to ELMIRON; and 170 with respect to TYLENOL. The number of pending lawsuits is expected to fluctuate as certain lawsuits are settled or dismissed and additional lawsuits are filed.

In August 2010, DePuy Orthopaedics, Inc. (DePuy) announced a worldwide voluntary recall of its ASR XL Acetabular System and DePuy ASR Hip Resurfacing System (ASR Hip) used in hip replacement surgery. Claims for personal injury have been made against DePuy and the Company. Cases filed in federal courts in the United States have been organized as a multi-district litigation in the United States District Court for the Northern District of Ohio. Litigation has also been filed in countries outside of the United States, primarily in the United Kingdom, Canada, Australia, Ireland, Germany, India and Italy. In November 2013, DePuy reached an agreement with a Court-appointed committee of lawyers representing ASR Hip plaintiffs to establish a program to settle claims with eligible ASR Hip patients in the United States who had surgery to replace their ASR Hips, known as revision surgery, as of August 2013. DePuy reached additional agreements in February 2015 and March 2017, which further extended the settlement program to include ASR Hip patients who had revision surgeries after August 2013 and prior to February 15, 2017. This settlement program has resolved more than 10,000 claims, thereby bringing to resolution significant ASR Hip litigation activity in the United States. However, lawsuits in the United States remain, and the settlement program does not address litigation outside of the United States. In Australia, a class action settlement was reached that resolved the claims of the majority of ASR Hip patients in that country. In Canada, the Company has reached agreements to settle the class actions filed in that country. The Company continues to receive information with respect to potential additional costs associated with this recall on a worldwide basis. The Company has established accruals for the costs associated with the United States settlement program and ASR Hip-related product liability litigation.

Claims for personal injury have also been made against DePuy Orthopaedics, Inc. and the Company (collectively, DePuy) relating to the PINNACLE Acetabular Cup System used in hip replacement surgery. Product liability lawsuits continue to be filed, and the Company continues to receive information with respect to potential costs and the anticipated number of cases. Most cases filed in federal courts in the United States have been organized as a multi-district litigation in the United States District Court for the Northern District of Texas (Texas MDL). Beginning on June 1, 2022, the Judicial Panel on Multidistrict Litigation ceased transfer of new cases into the Texas MDL, and there are now cases pending in federal court outside the Texas MDL. Litigation also has been filed in state courts and in countries outside of the United States. Prior to 2019, several adverse verdicts had been rendered against DePuy, one of which was reversed on appeal and remanded for retrial. During the first quarter of 2019, DePuy established a United States settlement program to resolve these cases. As part of the settlement program, adverse verdicts have been settled. The Company has established an accrual for product liability litigation associated with the PINNACLE Acetabular Cup System and the related settlement program.

Claims for personal injury have been made against Ethicon, Inc. (Ethicon) and the Company arising out of Ethicon's pelvic mesh devices used to treat stress urinary incontinence and pelvic organ prolapse. The Company continues to receive information with respect to potential costs and additional cases. Cases filed in federal courts in the United States had been organized as a multi-district litigation (MDL) in the United States District Court for the Southern District of West Virginia. In March 2021, the MDL Court entered an order closing the MDL. The MDL Court has remanded cases for trial to the jurisdictions where the case was originally filed and additional pelvic mesh lawsuits have been filed, and remain, outside of the MDL. The Company has settled or otherwise resolved the majority of the United States cases and the estimated costs associated with these settlements and the remaining cases are reflected in the Company's accruals. In addition, class actions and individual personal injury cases or claims seeking damages for alleged injury resulting from Ethicon's pelvic mesh devices have been commenced in various countries outside of the United States, including claims and cases in the United Kingdom, the Netherlands, Belgium, France, Ireland, Italy, Spain and Slovenia and class actions in Israel, Australia, Canada and South Africa. In November 2019, the Federal Court of Australia issued a judgment regarding its findings with respect to liability in relation to the three Lead Applicants and generally in relation to the design, manufacture, pre and post-market assessments and testing, and supply and promotion of the devices in Australia used to treat stress urinary incontinence and pelvic organ prolapse. In September 2022, after exhausting its appeals, the Company reached an in-principle agreement to resolve the two pelvic mesh class actions in Australia, pending Federal Court approval. In November 2022, the application for approval of the settlement was filed, and a hearing on the settlement has been scheduled for the end of February 2023. The class actions in Canada were discontinued in 2020 as a result of a settlement of a group of cases and an agreement to resolve the Israeli class action was reached in May 2021. The parties in the Israeli class action are currently finalizing the terms of the settlement. A motion to approve the settlement was filed with the Court. The Company has established accruals with respect to product liability litigation associated with Ethicon's pelvic mesh products.

Following a June 2016 worldwide market withdrawal of ETHICON PHYSIOMESH Flexible Composite Mesh (Physiomesh), claims for personal injury have been made against Ethicon, Inc. (Ethicon) and the Company alleging personal injury arising out of the use of this hernia mesh device. Cases filed in federal courts in the United States have been organized as a multi-district litigation (MDL) in the United States District Court for the Northern District of Georgia. A multi-county litigation (MCL) also has been formed in New Jersey state court and assigned to Atlantic County for cases pending in New Jersey. In addition to the matters in the MDL and MCL, there are additional lawsuits pending in the United States District Court for the Southern District

of Ohio, which are part of the MDL for polypropylene mesh devices manufactured by C.R. Bard, Inc., and lawsuits pending in two New Jersey MCLs formed for Proceed/Proceed Ventral Patch and Prolene Hernia systems, and lawsuits pending outside the United States. In May 2021, Ethicon and lead counsel for the plaintiffs entered into a term sheet to resolve approximately 3,600 Physiomesh cases (covering approximately 4,300 plaintiffs) pending in the MDL and MCL at that time. A master settlement agreement (MSA) was entered into in September 2021 and includes 3,729 cases in the MDL and MCL. All deadlines and trial settings in those proceedings are currently stayed pending the completion of the settlement agreement. Of the cases subject to the MSA, 2,236 have been dismissed with prejudice. Post-settlement cases in the Physiomesh MDL and MCL are subject to docket control orders requiring early expert reports and discovery requirements. As of January 2023, there are approximately 208 active cases subject to these orders which are being reviewed and evaluated.

Claims have also been filed against Ethicon and the Company alleging personal injuries arising from the PROCEED Mesh and PROCEED Ventral Patch hernia mesh products. In March 2019, the New Jersey Supreme Court entered an order consolidating these cases pending in New Jersey as an MCL in Atlantic County Superior Court. Additional cases have been filed in various federal and state courts in the United States, and in jurisdictions outside the United States.

Ethicon and the Company also have been subject to claims for personal injuries arising from the PROLENE Polypropylene Hernia System. In January 2020, the New Jersey Supreme Court created an MCL in Atlantic County Superior Court to handle such cases. Cases involving this product have also been filed in other federal and state courts in the United States.

In October 2022, an agreement in principle, subject to various conditions, was reached to settle the majority of the pending cases involving Proceed, Proceed Ventral Patch, Prolene Hernia System and related multi-layered mesh products. All litigation activities in the two New Jersey MCLs are stayed pending resolution of the proposed settlement. Future cases that are filed in the New Jersey MCLs will be subject to docket control orders requiring early expert reports and discovery requirements.

The Company has established accruals with respect to product liability litigation associated with ETHICON PHYSIOMESH Flexible Composite Mesh, PROCEED Mesh and PROCEED Ventral Patch, and PROLENE Polypropylene Hernia System products.

Claims for personal injury have been made against Janssen Pharmaceuticals, Inc. and the Company arising out of the use of RISPERDAL, and related compounds, indicated for the treatment of schizophrenia, acute manic or mixed episodes associated with bipolar I disorder and irritability associated with autism. Lawsuits primarily have been filed in state courts in Pennsylvania, California, and Missouri. Other actions are pending in various courts in the United States and Canada. Product liability lawsuits continue to be filed, and the Company continues to receive information with respect to potential costs and the anticipated number of cases. The Company has successfully defended a number of these cases but there have been verdicts against the Company, including a verdict in October 2019 of $8.0 billion of punitive damages related to one plaintiff, which the trial judge reduced to $6.8 million in January 2020. In September 2021, the Company entered into a settlement in principle with the counsel representing plaintiffs in this matter and in substantially all of the outstanding cases in the United States. The costs associated with this and other settlements are reflected in the Company's accruals.

Claims for personal injury arising out of the use of XARELTO, an oral anticoagulant, have been made against Janssen Pharmaceuticals, Inc. (JPI); the Company; and JPI's collaboration partner for XARELTO, Bayer Healthcare AG, and certain of its affiliates. Cases filed in federal courts in the United States have been organized as a multi-district litigation in the United States District Court for the Eastern District of Louisiana. In addition, cases were filed in state courts across the United States. Many of these cases were consolidated into a state mass tort litigation in Philadelphia, Pennsylvania and in a coordinated proceeding in Los Angeles, California. Class action lawsuits also have been filed in Canada. In March 2019, JPI and the Company announced an agreement in principle to settle the XARELTO cases in the United States; the settlement agreement was executed in May 2019, the settlement became final in December 2019, and the settlement was funded in January 2020. This resolved the majority of cases pending in the United States. The Company has established accruals for its costs associated with the United States settlement program and XARELTO related product liability litigation.

A significant number of personal injury claims alleging that talc causes cancer were made against Johnson & Johnson Consumer Inc. and the Company arising out of the use of body powders containing talc, primarily JOHNSON'S Baby Powder. The number of these personal injury lawsuits, filed in state and federal courts in the United States as well as outside of the United States, continued to increase.

In talc cases that previously have gone to trial, the Company has obtained a number of defense verdicts, but there also have been verdicts against the Company, many of which have been reversed on appeal. In June 2020, the Missouri Court of Appeals reversed in part and affirmed in part a July 2018 verdict of $4.7 billion in *Ingham v. Johnson & Johnson, et al.,* No. ED 207476 (Mo. App.), reducing the overall award to $2.1 billion. An application for transfer of the case to the Missouri Supreme Court

was subsequently denied and in June 2021, a petition for certiorari, seeking a review of the *Ingham* decision by the United States Supreme Court, was denied. In June 2021, the Company paid the award, which, including interest, totaled approximately $2.5 billion. The facts and circumstances, including the terms of the award, were unique to the *Ingham* decision and not representative of other claims brought against the Company. The Company continues to believe that it has strong legal grounds to contest the other talc verdicts that it has appealed. Notwithstanding the Company's confidence in the safety of its talc products, in certain circumstances the Company has settled cases.

In October 2021, Johnson & Johnson Consumer Inc. (Old JJCI) implemented a corporate restructuring (the 2021 Corporate Restructuring). As a result of that restructuring, Old JJCI ceased to exist and three new entities were created: (a) LTL Management LLC, a North Carolina limited liability company (LTL or Debtor); (b) Royalty A&M LLC, a North Carolina limited liability company and a direct subsidiary of LTL (RAM); and (c) the Debtor's direct parent, Johnson & Johnson Consumer Inc., a New Jersey company (New JJCI). The Debtor received certain of Old JJCI's assets and became solely responsible for the talc-related liabilities of Old JJCI, including all liabilities related in any way to injury or damage, or alleged injury or damage, sustained or incurred in the purchase or use of, or exposure to, talc, including talc contained in any product, or to the risk of, or responsibility for, any such damage or injury, except for any liabilities for which the exclusive remedy is provided under a workers' compensation statute or act (the Talc-Related Liabilities).

In October 2021, notwithstanding the Company's confidence in the safety of its talc products, the Debtor filed a voluntary petition with the United States Bankruptcy Court for the Western District of North Carolina, Charlotte Division, seeking relief under chapter 11 of the Bankruptcy Code (the LTL Bankruptcy Case). As a result of the LTL Bankruptcy Case, the North Carolina Bankruptcy Court entered a temporary restraining order staying all litigation against LTL and Old JJCI. On November 15, 2021, the North Carolina Bankruptcy Court confirmed the scope of the stay, issuing a Preliminary Injunction (PI) prohibiting and enjoining the commencement and prosecution of talc-related claims against LTL, Old JJCI, New JJCI, the Company, other of their corporate affiliates, identified retailers, insurance companies, and certain other parties (the Protected Parties). The LTL Bankruptcy Case was transferred to the United States Bankruptcy Court for the District of New Jersey in November 2021, and that court extended the PI through the end of February 2022. Claimants filed motions to dismiss the LTL Bankruptcy Case and, following a multiple day hearing, the New Jersey Bankruptcy Court denied those motions by order issued in March 2022. The New Jersey Bankruptcy Court simultaneously issued another order extending the stay as to the Protected Parties. The claimants subsequently filed notices of appeal as to the denial of the motions to dismiss and the extension of the stay. In May 2022, the Third Circuit Court of Appeals granted the petitions to appeal. The briefing and oral argument on the appeal were completed in September 2022. On January 30, 2023, the Third Circuit reversed the Bankruptcy Court's ruling and remanded to the Bankruptcy Court to dismiss the LTL bankruptcy. LTL filed a petition for rehearing on the decision.

While the New Jersey Bankruptcy Court's order effectively stays all of the Company's talc-related personal injury litigation, LTL has agreed to lift the stay on a small number of appeals where appeal bonds have been filed.

The Company has agreed to provide funding to LTL for the payment of amounts the New Jersey Bankruptcy Court determines are owed by LTL and the establishment of a $2 billion trust in furtherance of this purpose. The Company has established a reserve for approximately $2 billion in connection with the aforementioned trust. After and as a result of the filing of the LTL Bankruptcy Case, the Company de-consolidated LTL, which is a related party. The impact of the de-consolidation is not material to the Company. The parties have not yet reached a resolution of all talc matters in the LTL Bankruptcy Case, and the Company is unable to estimate the possible loss or range of loss beyond the amount accrued.

A class action advancing claims relating to industrial talc was filed against the Company and others in New Jersey state court in May 2022 (the Edley Class Action). The Edley Class Action asserts, among other things, that the Company fraudulently defended past asbestos personal injury lawsuits arising from exposure to industrial talc mined, milled, and manufactured before January 6, 1989 by the Company's then wholly owned subsidiary, Windsor Minerals, Inc., which is currently a debtor in the Imerys Bankruptcy described hereafter. The Company removed the Edley Class Action to federal court in the District of New Jersey. In July 2022, Imerys filed a motion in the Imerys Bankruptcy to stay the Edley Class Action, which was denied in August 2022. In October 2022, the Company filed motions to dismiss and to deny certification of a class to pursue the Edley Class Action in the New Jersey District Court.

In February 2019, the Company's talc supplier, Imerys Talc America, Inc. and two of its affiliates, Imerys Talc Vermont, Inc. and Imerys Talc Canada, Inc. (collectively, Imerys) filed a voluntary petition under chapter 11 of the United States Code (the Bankruptcy Code) in the United States Bankruptcy Court for the District of Delaware (Imerys Bankruptcy). The Imerys Bankruptcy relates to Imerys's potential liability for personal injury from exposure to talcum powder sold by Imerys. In its bankruptcy, Imerys alleges it has claims against the Company for indemnification and rights to joint insurance proceeds. In May 2020, Imerys, its parent Imerys S.A., the Tort Claimants' Committee (TCC), and the Future Claimants' Representative (FCR) (collectively, the Plan Proponents) filed their Plan of Reorganization (the Plan) and the Disclosure Statement related

thereto. The Plan Proponents have since filed numerous amendments to the Plan and Disclosure Statement. A hearing on the Plan Proponent's Disclosure Statement was held in January 2021, and the Court entered an order approving the Disclosure Statement, allowing Imerys to proceed with soliciting votes on the Plan.

In March 2021, the Company voted to reject the Plan and opted out of the consensual releases in the Plan. In April 2021, the Plan Proponents announced the Plan had received the requisite number of accepting votes to confirm the Plan. The Company challenged certain improprieties with respect to portions of the vote and sought to disqualify those votes. In October 2021, the Bankruptcy Court issued a ruling deeming thousands of votes as withdrawn.

In October 2021, Imerys cancelled the confirmation hearing on the Plan. Imerys, the TCC, the FCR, certain of Imerys's insurers, and certain parties in the Cyprus Mines chapter 11 case (described below) (collectively the Mediation Parties) agreed to engage in mediation. The most recent term of the mediation ended on December 31, 2022.

In July 2021, Imerys commenced an adversary proceeding against the Company in the Imerys Bankruptcy (the Imerys Adversary Proceeding). The Imerys Adversary Proceeding sought, among other things, certain declarations with respect to the indemnification obligations allegedly owed by the Company to Imerys. The TCC and FCR simultaneously filed a motion for temporary restraining order and preliminary injunction seeking to enjoin the Company from undergoing a corporate restructuring that would separate the Company's talc liabilities from its other assets. The Bankruptcy Court denied the motion. The Company thereafter filed a motion to dismiss the adversary proceeding. The Bankruptcy Court has not yet decided the motion to dismiss. In October 2021, the Company filed a Notice of Bankruptcy Filing and Stay of Proceedings clarifying that the automatic stay arising upon the filing of the LTL Bankruptcy Case should apply to the Imerys Adversary Proceeding.

In June 2020, Cyprus Mines Corporation and its parent, Cyprus Amax Minerals Company (CAMC) (together, Cyprus), which had owned certain Imerys talc mines, filed an adversary proceeding against the Company and Imerys in the Imerys Bankruptcy seeking a declaration of indemnity rights under certain contractual agreements (the Cyprus Adversary Proceeding). The Company denies such indemnification is owed, and filed a motion to dismiss the adversary complaint. In February 2021, Cyprus filed a voluntary petition for relief under chapter 11 of the Bankruptcy Code and filed its Disclosure Statement and Plan (the Cyprus Plan). The Cyprus Plan contemplates a settlement with Imerys and talc claimants where Cyprus would make a monetary contribution to a trust established under the Imerys Plan in exchange for an injunction against talc claims asserted against it and certain protected parties. Cyprus has not yet sought approval of its Disclosure Statement and Plan. Cyprus, along with the TCC and FCR appointed in the Cyprus chapter 11 case, have agreed to participate in the mediation with the Mediation Parties. In October 2021, the Company filed a Notice of Bankruptcy Filing and Stay of Proceedings clarifying that the automatic stay arising upon the filing of the LTL Bankruptcy Case should apply to the Cyprus Adversary Proceeding. In June 2022, Cyprus commenced an Adversary Proceeding in its chapter 11 case seeking an order enforcing the automatic stay by enjoining parties from commencing or continuing "talc-related claims" against CAMC. In June 2022, the court entered a preliminary injunction order enjoining claimants from pursuing talc-related claims against CAMC through January 2023.

In February 2021, several of the Company's insurers involved in coverage litigation in New Jersey State Court (the Coverage Action) filed a motion in the Imerys Bankruptcy Court proceeding seeking a determination that the automatic stay does not apply to the Coverage Action and, in the alternative, seeking relief from the automatic stay to allow them to continue to litigate their claims in the Coverage Action. In March 2021, the Company filed a limited response and reservation of rights with respect to the motion. The Court entered an agreed order modifying the stay to allow the litigation in the Coverage Action to continue. In October 2021, LTL filed a Notice of Bankruptcy Filing and Stay of Proceedings clarifying that the automatic stay arising upon the filing of the LTL Bankruptcy Case should apply to the Coverage Action. In March 2022, the New Jersey Bankruptcy Court ruled that the LTL automatic stay applied to the Coverage Action.

In February 2018, a securities class action lawsuit was filed against the Company and certain named officers in the United States District Court for the District of New Jersey, alleging that the Company violated the federal securities laws by failing to disclose alleged asbestos contamination in body powders containing talc, primarily JOHNSON'S Baby Powder, and that purchasers of the Company's shares suffered losses as a result. Plaintiff is seeking damages. In April 2019, the Company moved to dismiss the complaint and briefing on the motion was complete as of August 2019. In December 2019, the Court denied, in part, the motion to dismiss. In March 2020, the Company answered the complaint. In April 2021, briefing on Plaintiff's motion for class certification was completed. In July 2021, the Company filed a notice of supplemental authority in opposition to Plaintiff's motion for class certification, and Plaintiff filed a response. In December 2021, the Company filed a motion to supplement the class certification record, and in January 2022, Plaintiff responded. In March 2022, LTL asked the New Jersey Bankruptcy Court to stay the securities class action. In April 2022, Defendants filed a second motion to supplement the class certification record. In May 2022, the New Jersey Bankruptcy Court entered an order staying the securities class action. Plaintiff has appealed the Bankruptcy Court's order.

A lawsuit was brought against the Company in the Superior Court of California for the County of San Diego alleging violations of California's Consumer Legal Remedies Act (CLRA) relating to JOHNSON'S Baby Powder. In that lawsuit, the plaintiffs allege that the Company violated the CLRA by failing to provide required Proposition 65 warnings. In July 2019, the Company filed a notice of removal to the United States District Court for the Southern District of California and plaintiffs filed a second amended complaint shortly thereafter. In October 2019, the Company moved to dismiss the second amended complaint for failure to state a claim upon which relief may be granted. In response to those motions, plaintiffs filed a third amended complaint. In December 2019, the Company moved to dismiss the third amended complaint for failure to state a claim upon which relief may be granted. In April 2020, the Court granted the motion to dismiss but granted leave to amend. In May 2020, plaintiffs filed a Fourth Amended Complaint but indicated that they would be filing a motion for leave to file a fifth amended complaint. Plaintiffs filed a Fifth Amended Complaint in August 2020. The Company moved to dismiss the Fifth Amended Complaint for failure to state a claim upon which relief may be granted. In January 2021, the Court issued an Order and opinion ruling in the Company's favor and granting the motion to dismiss with prejudice. In February 2021, Plaintiffs filed a Notice of Appeal with the Ninth Circuit. Plaintiffs filed their opening brief in July 2021. The company filed its responsive brief in October 2021. In October 2021, Notice of Suggestion of Bankruptcy was filed with the Ninth Circuit. A bankruptcy stay was imposed in December 2021, and the Court held the reply deadline in abeyance. In February 2022, the Bankruptcy Court issued an order extending the stay. The appeal continues to be held in abeyance, with the Company being required to file periodic status updates.

In addition, the Company has received inquiries, subpoenas, and requests to produce documents regarding talc matters and the LTL Bankruptcy Case from various governmental authorities. The Company has produced documents and responded to inquiries, and will continue to cooperate with government inquiries.

Claims for personal injury have been made against a number of Johnson & Johnson companies, including Janssen Pharmaceuticals, Inc. and the Company, arising out of the use of INVOKANA, a prescription medication indicated to improve glycemic control in adults with Type 2 diabetes. In December 2016, lawsuits filed in federal courts in the United States were organized as a multi-district litigation in the United States District Court for the District of New Jersey. Cases have also been filed in state courts. Class action lawsuits have been filed in Canada. Product liability lawsuits continue to be filed, and the Company continues to receive information with respect to potential costs and the anticipated number of cases. The Company has settled or otherwise resolved many of the cases and claims in the United States and the costs associated with these settlements are reflected in the Company's accruals.

Claims for personal injury have been made against a number of Johnson & Johnson companies, including Janssen Pharmaceuticals, Inc. and the Company, arising out of the use of ELMIRON, a prescription medication indicated for the relief of bladder pain or discomfort associated with interstitial cystitis. These lawsuits, which allege that ELMIRON contributes to the development of permanent retinal injury and vision loss, have been filed in both state and federal courts across the United States. In December 2020, lawsuits filed in federal courts in the United States, including putative class action cases seeking medical monitoring, were organized as a multi-district litigation in the United States District Court for the District of New Jersey. In addition, cases have been filed in various state courts of New Jersey, which have been coordinated in a multi-county litigation in Bergen County, as well as the Court of Common Pleas in Philadelphia, which have been coordinated and granted mass tort designation. In addition, three class action lawsuits have been filed in Canada. Product liability lawsuits continue to be filed, and the Company continues to receive information with respect to potential costs and the anticipated number of cases. The Company has established accruals for defense and indemnity costs associated with ELMIRON related product liability litigation.

Claims for personal injury have been made against Johnson and Johnson Consumer Inc. (JJCI), arising out of the use of TYLENOL, an over-the-counter pain medication, alleging that prenatal exposure to acetaminophen is associated with the development of autism spectrum disorder and/or attention-deficit/hyperactivity disorder. In October 2022, lawsuits filed in federal courts in the United States were organized as a multi-district litigation in the United States District Court for the Southern District of New York. In addition, lawsuits have been filed in Canada. Product liability lawsuits continue to be filed, and the Company continues to receive information with respect to potential costs and the anticipated number of cases. The Company has established accruals for defense costs associated with TYLENOL related product liability litigation.

INTELLECTUAL PROPERTY

Certain subsidiaries of the Company are subject, from time to time, to legal proceedings and claims related to patent, trademark and other intellectual property matters arising out of their businesses. Many of these matters involve challenges to the coverage and/or validity of the patents on various products and allegations that certain of the Company's products infringe the patents of third parties. Although these subsidiaries believe that they have substantial defenses to these challenges and allegations with respect to all significant patents, there can be no assurance as to the outcome of these matters. A loss in any of these cases could adversely affect the ability of these subsidiaries to sell their products, result in loss of sales due to loss of market exclusivity,

require the payment of past damages and future royalties, and may result in a non-cash impairment charge for any associated intangible asset. Significant matters are described below.

MedTech

In August 2018, Intuitive Surgical, Inc. and Intuitive Surgical Operations, Inc. (collectively, Intuitive) filed a patent infringement suit against Auris Health, Inc. (Auris) in United States District Court for the District of Delaware. In the suit, Intuitive alleges willful infringement of U.S. Patent Nos. 6,522,906 ('906); 6,800,056 ('056); 8,142,447 ('447); and 9,452,276 ('276) based on Auris' MONARCH Platform. Auris filed IPR Petitions with the U.S. Patent and Trademark Office (USPTO) regarding the '056, '447, '276 and '906 patents. In December 2019, the USPTO denied review of the '056 patent. In February and March 2020, the USPTO instituted review of the '447, and '906 patents and denied review of the '276 patent. In March 2021, the USPTO ruled that the challenged claims of the '447 and '906 patents are not invalid. Auris appealed, and in April 2022, the United States Court of Appeals for the Federal Circuit vacated the decision that the '447 patent was not invalid and remanded the decision to the USPTO for further review. In May 2022, the United States Court of Appeals for the Federal Circuit confirmed the ruling that claim 53 of the '906 patent was not invalid, vacated the decision that the remaining claims of the '906 patent were not invalid and remanded the decision to the USPTO for further review. Auris filed a request for reexamination of the '276 patent in November 2021, and in January 2022, the USPTO granted the reexamination request. Trial is scheduled to begin in September 2023.

In August 2019, RSB Spine LLC (RSB Spine) filed a patent infringement suit against DePuy Synthes, Inc. in the United States District Court for the District of Delaware. In October 2019, RSB Spine amended the complaint to change the named defendants to DePuy Synthes Sales, Inc. and DePuy Synthes Products, Inc. In the suit, RSB Spine alleges willful infringement of U.S. Patent Nos. 6,984,234 ('234) and 9,713,537 ('537) by one or more of the following products: ZERO-P-VA Spacer, ZERO-P Spacer, ZERO-P NATURAL Plate, SYNFIX LR Spacer and SYNFIX Evolution System. RSB Spine seeks monetary damages and injunctive relief. In November 2019, the suit was consolidated for pre-trial purposes with other patent infringement suits brought by RSB Spine in the United States District Court for the District of Delaware against Life Spine, Inc., Medacta USA, Inc., and Precision Spine, Inc. In June 2022, DePuy filed potentially dispositive summary judgment motions that the '234 patent is invalid as anticipated and the '537 patent is not infringed. In November 2022, the Court granted DePuy's summary judgment motion that the '234 patent is invalid as anticipated and denied DePuy's motion that the '537 patent is not infringed. In December 2022, the Court conducted a jury trial on the '537 patent where the jury found that the '537 patent was not literally infringed, but that DePuy infringed under the doctrine of equivalents (DOE). The jury awarded RSB $12 million in damages subject to post-trial motions and appeals.

In October 2020, Rasmussen Instruments, LLC (Rasmussen) filed a patent infringement suit against DePuy Synthes Products, Inc., DePuy Synthes Sales, Inc. and Medical Device Business Services, Inc. (collectively, DePuy) in the United States District Court for the District of Massachusetts. Rasmussen alleges that DePuy willfully infringes U.S. Patent Nos. 9,492,180 ('180) and 10,517,583 ('583) by making and selling the Attune Balanced Sizer. In April 2021, Rasmussen sought permission to amend its infringement contentions to allege that DePuy also willfully infringes the '583 patent by making and selling the Attune Balancing Blocks. Rasmussen seeks treble damages for willful infringement. Trial concluded in March 2022, with the jury returning a verdict in favor of Rasmussen, finding willful infringement of the '180 patent, and awarding damages in the amount of $20 million. DePuy challenged the verdict in its post-trial motions. In July 2022, a hearing was held on the post-trial motions.

Pharmaceutical
Litigation Against Filers of Abbreviated New Drug Applications (ANDAs)

The following summarizes lawsuits the Company's subsidiaries have brought against generic companies that have filed ANDAs with the U.S. FDA or undertaken similar regulatory processes outside of the United States, seeking to market generic forms of products sold by various subsidiaries of the Company prior to expiration of the applicable patents covering those products. These ANDAs typically include allegations of non-infringement and invalidity of the applicable patents. The Inter Partes Review (IPR) process with the USPTO, created under the 2011 America Invents Act, is also being used at times by generic companies in conjunction with ANDAs and lawsuits, to challenge the applicable patents. In the event the Company's subsidiaries are not successful in an action, or the automatic statutory stay of the ANDAs expires before the United States District Court rulings are obtained, the generic companies involved would have the ability, upon approval of the U.S. FDA, to introduce generic versions of their products to the market, resulting in the potential for substantial market share and revenue losses for the applicable products, and which may result in a non-cash impairment charge in any associated intangible asset. In addition, from time to time, the Company's subsidiaries may settle these types of actions and such settlements can involve the introduction of generic versions of the products at issue to the market prior to the expiration of the relevant patents.

ZYTIGA

Beginning in January 2019, Janssen Inc., Janssen Oncology, Inc., and BTG International Ltd. (collectively, Janssen) initiated Statements of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations in Canada against Apotex Inc. (Apotex), Pharmascience Inc. (Pharmascience) and Dr. Reddy's Laboratories Ltd. and Dr. Reddy's Laboratories, Inc. (collectively, DRL) in response to those parties' filing of Abbreviated New Drug Submissions (ANDS) seeking approval to market generic versions of ZYTIGA before the expiration of the Canadian Patent No. 2,661,422 ('422). The trial in these actions concluded in November 2020, and the Court issued a decision holding the '422 patent invalid in January 2021. In February 2021, Janssen appealed the decision. The appeal hearing took place in September 2022. In November 2022, Janssen's appeal was dismissed.

In April 2021, July 2021 and April 2022, respectively, Apotex, DRL and Pharmascience initiated Statements of Claim under Section 8 of the Patented Medicines (Notice of Compliance) Regulations against Janssen seeking damages in respect of those parties generic Zytiga tablets. Trials against Apotex and DRL are scheduled for June 2023. A trial date for the Pharmascience action has not been set.

XARELTO

Beginning in March 2021, Janssen Pharmaceuticals, Inc. (JPI) and Bayer Pharma AG and Bayer AG (collectively, Bayer) filed patent infringement lawsuits in the United States District Court for the District of Delaware against a number of generic companies who filed ANDAs seeking approval to market generic versions of XARELTO (2.5 mg) before expiration of U.S. Patent No. 10,828,310 ('310). The following generic drug companies are named defendants: Dr. Reddy's Laboratories, Inc. and Dr. Reddy's Laboratories, Ltd.; Lupin Limited and Lupin Pharmaceuticals, Inc.; Taro Pharmaceutical Industries Ltd. and Taro Pharmaceuticals U.S.A., Inc.; and Teva Pharmaceuticals USA, Inc. In October 2021, the court consolidated the Delaware lawsuits for all purposes, including trial. Trial for the consolidated Delaware lawsuits is scheduled to begin in May 2023.

In July 2021, JPI and Bayer filed a patent infringement lawsuit in the United States District Court for the Northern District of West Virginia against Mylan Pharmaceuticals Inc. and Mylan Inc. (collectively, Mylan) which filed an ANDA seeking approval to market a generic version of XARELTO (2.5 mg) before expiration of the '310 patent. In August 2021, JPI and Bayer filed a motion before the United States Judicial Panel on Multidistrict Litigation (the MDL panel) to transfer this lawsuit to the United States District Court for the District of Delaware for coordinated and consolidated pretrial proceedings. In December 2021, the MDL panel granted the motion. In August 2022, after receiving a second notice letter from Mylan regarding the same ANDA, JPI and Bayer filed a second patent infringement lawsuit in the United States District Court for the Northern District of West Virginia against Mylan. In September 2022, Mylan moved to dismiss the second lawsuit. In September 2022, the MDL panel transferred the second lawsuit to the District of Delaware. No trial date has been set for these two lawsuits. In October 2022, Mylan voluntarily withdrew its motion to dismiss.

In each of these lawsuits, JPI and Bayer are seeking an order enjoining defendants from marketing their generic version of XARELTO (2.5 mg) before the expiration of the '310 patent. In January 2023, the court issued an order staying the lawsuits until after a final written decision is issued in the Inter Partes Review proceedings on the '310 patent.

In February 2022, Mylan Pharmaceuticals Inc. filed a Petition for Inter Partes Review (IPR) with the United States Patent and Trademark Office (USPTO), seeking to invalidate the '310 patent. In August 2022, the Patent Trial and Appeal Board (PTAB) issued a decision instituting IPR.

In September 2022, InvaGen Pharmaceuticals, Inc. filed a Petition for IPR with the USPTO seeking to invalidate the '310 patent. Also in September 2022, Teva Pharmaceuticals USA, Inc. filed a Petition for IPR with the USPTO seeking to invalidate the '310 patent. In October 2022, the PTAB issued decisions instituting IPR in both proceedings and joining them with the earlier IPR proceeding filed by Mylan Pharmaceuticals Inc.

In September 2022, JPI, Bayer, and Bayer Intellectual Property GmbH (BIP) initiated a patent infringement lawsuit in the United States District Court for the District of New Jersey against USV Private Limited (USV), who filed an ANDA seeking approval to market generic versions of XARELTO (2.5 mg, 10 mg, 15 mg, and 20 mg) before the expiration of the '310 patent and U.S. Patent No. 9,539,218 ('218). JPI, Bayer, and BIP are seeking an order enjoining USV from marketing its generic version of XARELTO (2.5 mg) before the expiration of the '310 patent, and its generic versions of XARELTO (10 mg, 15 mg, and 20 mg) before the expiration of the '218 patent. In November 2022, the MDL panel transferred this lawsuit to the United States District Court for the District of Delaware.

In September 2022, JPI, Bayer AG, and BIP initiated a patent infringement lawsuit in the United States District Court for the District of New Jersey against Mankind Pharma Limited (Mankind), who filed an ANDA seeking approval to market generic versions of XARELTO (10 mg, 15 mg, and 20 mg) before the expiration of the ’218 patent. JPI, Bayer AG, and BIP are seeking an order enjoining Mankind from marketing its generic versions of XARELTO before the expiration of the ’218 patent.

In November 2022, JPI, Bayer, and BIP initiated a patent infringement lawsuit in the United States District Court for the District of Delaware against Epic Pharma, LLC (Epic), who filed an ANDA seeking approval to market generic versions of XARELTO (2.5 mg, 10 mg, 15 mg, and 20 mg) before the expiration of the ’310 patent and the ’218 patent. JPI, Bayer, and BIP are seeking an order enjoining Epic from marketing its generic version of XARELTO (2.5 mg) before the expiration of the ’310 patent, and its generic versions of XARELTO (10 mg, 15 mg, and 20 mg) before the expiration of the ’218 patent.

In December 2022, JPI and Bayer initiated a patent infringement lawsuit in the United States District Court for the District of Delaware against Apotex Inc. and Apotex Corp. (collectively, Apotex), who filed an ANDA seeking approval to market generic versions of XARELTO (2.5 mg) before the expiration of the ’310 patent. JPI and Bayer are seeking an order enjoining Apotex from marketing its generic version of XARELTO (2.5 mg) before the expiration of the ’310 patent.

OPSUMIT

In May 2020, Janssen Inc. (Janssen) and Actelion Pharmaceuticals Ltd (Actelion) initiated a Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Sandoz Canada Inc. (Sandoz) in Canada in response to Sandoz’s filing of an ANDS seeking approval to market a generic version of OPSUMIT 10 mg, before the expiration of Canadian Patent No. 2,659,770 (’770). Sandoz stipulated to infringement of the ’770 patent. Trial against Sandoz on the issue of validity concluded in February 2022, and in May 2022, the Court issued a decision in favor of Janssen and Actelion. In June 2022, Sandoz appealed the decision.

In May 2020, Janssen and Actelion initiated a Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Apotex Inc. (Apotex) in Canada in response to Apotex’s filing of an ANDS seeking approval to market a generic version of OPSUMIT 10 mg, before the expiration of the ’770 patent. Apotex stipulated to validity of the ’770 patent. Trial against Apotex on the issue of infringement concluded in March 2022, and in May 2022, the Court issued a decision in favor of Janssen and Actelion. In June 2022, Apotex appealed the decision.

In January 2023, Janssen and Actelion initiated a Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Generic Medical Partners Inc. (GMP) in Canada in response to GMP’s filing of an ANDS seeking approval to market a generic version of OPSUMIT 10 mg, before the expiration of Canadian Patent Nos. 2,659,770 and 2,621,273.

In each of these Canadian actions, Janssen and Actelion are seeking an order enjoining the defendants from marketing their generic versions of OPSUMIT before the expiration of the relevant patents.

In January 2023, Actelion Pharmaceuticals Ltd and Actelion Pharmaceuticals US, Inc. (collectively, Actelion) initiated a patent infringement lawsuit in the United States District Court for the District of New Jersey against Sun Pharmaceutical Industries Limited and Sun Pharmaceutical Industries, Inc. (collectively, Sun) who filed an ANDA seeking approval to market a generic version of OPSUMIT before the expiration of U.S. Patent Nos. 7,094,781 (’781) and 10,946,015 (’015). Actelion is seeking an order enjoining Sun from marketing their generic versions of OPSUMIT before the expiration of the ’781 and ’015 patents.

INVEGA SUSTENNA

In January 2018, Janssen Pharmaceutica NV and Janssen Pharmaceuticals, Inc. (collectively, Janssen) initiated a patent infringement lawsuit in the United States District Court for the District of New Jersey against Teva Pharmaceuticals USA, Inc. (Teva), which filed an ANDA seeking approval to market a generic version of INVEGA SUSTENNA before the expiration of U.S. Patent No. 9,439,906 (’906). Trial concluded in October 2020. In October 2021, the court issued a decision in Janssen’s favor. Teva has appealed the decision.

In August 2019, Janssen initiated a patent infringement lawsuit in the United States District Court for the District of New Jersey against Mylan Laboratories Limited (Mylan), which filed an ANDA seeking approval to market a generic version of INVEGA SUSTENNA before the expiration of the ’906 patent. Pursuant to an agreement by the parties, judgment in favor of Janssen was entered in December 2021. Mylan appealed.

In December 2019, Janssen initiated a patent infringement lawsuit in the United States District Courts for the Districts of New Jersey and Delaware against Pharmascience Inc., Mallinckrodt PLC and Specgx LLC (collectively, Pharmascience), which filed an ANDA seeking approval to market a generic version of INVEGA SUSTENNA before the expiration of the ’906 patent.

In November 2021, Janssen initiated a patent infringement lawsuit in the United States District Court for the District of Delaware against Tolmar, Inc., Tolmar Therapeutics, Inc., Tolmar Pharmaceuticals, Inc. and Tolmar Holding, Inc. (collectively, Tolmar), which filed an ANDA seeking approval to market a generic version of INVEGA SUSTENNA before the expiration of the ’906 patent. A trial is scheduled to begin in October 2023.

In February 2022, Janssen initiated a patent infringement lawsuit in the United States District Court for the District of New Jersey against Accord Healthcare, Inc., Accord Healthcare, Ltd. and Intas Pharmaceuticals, Ltd. (collectively, Accord), who filed an ANDA seeking approval to market a generic version of INVEGA SUSTENNA before the expiration of the ’906 patent.

In each of these U.S. lawsuits, Janssen is seeking an order enjoining the defendant from marketing a generic version of INVEGA SUSTENNA before the expiration of the relevant patents.

In February 2018, Janssen Inc. and Janssen Pharmaceutica NV (collectively, Janssen Canada) initiated a Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Teva Canada Limited (Teva Canada) in response to Teva’s filing of an ANDS seeking approval to market a generic version of INVEGA SUSTENNA before the expiration of Canadian Patent Nos. 2,309,629 (’629) and 2,655,335 (’335). Janssen subsequently discontinued the portion of the lawsuit relating to the ’629 patent. In May 2020, the Canadian Federal Court issued a Public Judgment and Reasons declaring that Teva Canada’s generic version of INVEGA SUSTENNA, if approved, would infringe certain claims of the ’335 patent and that the claims of the ’335 patent are not invalid. Teva Canada appealed.

In November 2020, Janssen Canada initiated a Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Pharmascience Inc. in response to Pharmascience Inc.’s filing of an ANDS seeking approval to market a generic version of INVEGA SUSTENNA before the expiration of the ’335 patent. A summary trial on the issue of infringement took place in November 2021. In January 2022, the Court issued a decision in favor of Janssen on the issue of infringement. Pharmascience filed an appeal. In March 2022, Janssen Canada initiated a Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Pharmascience in response to Pharmascience’s filing of an ANDS seeking approval to market a generic version of an additional strength of INVEGA SUSTENNA before the expiration of the ’335 patent. The action has been consolidated with the November 2020 action for trial, which took place in July 2022. In August 2022, the Court issued a decision finding the claims of the’335 patent are not invalid. Pharmascience appealed.

In January 2021, Janssen Canada initiated a Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Apotex Inc. (Apotex) in response to Apotex’s filing of an ANDS (original ANDS) seeking approval to market a generic version of INVEGA SUSTENNA before the expiration of the ’335 patent. A summary trial on the issue of infringement took place in December 2021. In January 2022, the Court issued a decision in favor of Janssen on the issue of infringement. Apotex appealed.

In June 2022, Janssen Canada initiated Statements of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Apotex in response to Apotex’s Notice of Allegation of invalidity with respect to the original ANDS and in response to Apotex’s filing of an ANDS seeking approval to market a generic version of an additional strength of INVEGA SUSTENNA before the expiration of the ’335 patent. A trial is scheduled to begin in March 2024.

In each of these Canadian lawsuits, Janssen Canada is seeking an order enjoining the defendant from marketing a generic version of INVEGA SUSTENNA before the expiration of the relevant patents.

INVEGA TRINZA

In September 2020, Janssen Pharmaceuticals, Inc., Janssen Pharmaceutica NV, and Janssen Research & Development, LLC (collectively, Janssen) initiated a patent infringement lawsuit in the United States District Court for the District of New Jersey against Mylan Laboratories Limited, Mylan Pharmaceuticals Inc., and Mylan Institutional LLC (collectively, Mylan). Mylan filed an ANDA seeking approval to market generic versions of INVEGA TRINZA (546 mg) before expiration of U.S. Patent No. 10,143,693 (’693) relating to INVEGA TRINZA (546 mg).

In August 2021, Janssen initiated a patent infringement lawsuit in the United States District Court for the District of New Jersey against Mylan. Mylan filed an ANDA seeking approval to market generic versions of INVEGA TRINZA (819 mg) before expiration of the ’693 patent.

In October 2021, Janssen initiated a patent infringement lawsuit in the United States District Court for the District of New Jersey against Mylan. Mylan filed an ANDA seeking approval to market generic versions of INVEGA TRINZA (273 mg and 410 mg) before expiration of the ’693 patent.

In January 2022, the court consolidated the three cases into the case filed in September 2020. In each of these consolidated cases, Janssen is seeking an order enjoining Mylan from marketing its generic versions of INVEGA TRINZA before expiration of the ’693 patent. Trial was conducted in November and December 2022, and post-trial briefing is proceeding. Closing arguments will be held in March 2023.

IMBRUVICA

In March 2019, Pharmacyclics LLC (Pharmacyclics) and Janssen Biotech, Inc. (JBI) filed a patent infringement lawsuit in the United States District Court for the District of Delaware against Alvogen Pine Brook LLC and Natco Pharma Ltd. (collectively, Alvogen), which filed an ANDA seeking approval to market generic versions of IMBRUVICA tablets, asserting infringement of U.S. Patent Nos. 7,514,444; 8,003,309; 8,476,284; 8,497,277; 8,697,711; 8,753,403; 8,754,090; 8,754,091; 8,952,015; 8,957,079; 9,181,257; 9,296,753; 9,655,857; 9,725,455; 10,010,507; 10,106,548; and 10,125,140. In June 2019, Pharmacyclics and JBI amended their complaint against Alvogen to further allege infringement of U.S. Patent No. 10,213,386.

Trial against Alvogen took place in October 2020. In August 2021, the District Court issued a decision in favor of Pharmacyclics and Janssen finding the asserted claims against Alvogen to be infringed and not invalid. In November 2022, the United States Court of Appeals for the Federal Circuit affirmed the District Court’s decision.

In September 2021, Pharmacyclics and Janssen Inc. (Janssen Canada) initiated Statements of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Natco Pharma (Canada) Inc. (Natco) in response to Natco’s filing of two ANDSs seeking approval to market generic versions of IMBRUVICA capsules before the expiration of Canadian Patent Nos. 2,663,116 (’116); 2,928,721 (’721); 2,800,913 (’913); 3,007,787 (’787); 3,007,788 (’788); 2,875,986 (’986); and 3,022,256 (’256). In this lawsuit, Pharmacyclics and Janssen Canada are seeking an order enjoining Natco from marketing its generic version of IMBRUVICA before the expiration of the relevant patents. Trial is scheduled to begin in July 2023.

In October 2022, Pharmacyclics and Janssen Canada initiated a second Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Natco in response to Natco’s filing of an ANDS seeking approval to market a generic version of IMBRUVICA capsules before the expiration of the ’116, ’721, ’913, ’787, and ’788 patents and Canadian Patent No. 2,851,808. In this lawsuit, Pharmacyclics and Janssen Canada are seeking an order enjoining Natco from marketing its generic version of IMBRUVICA capsules before the expiration of the relevant patents. Trial in this second action is scheduled to begin in August 2024.

In February 2023, Pharmacyclics and Janssen Canada initiated a Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Sandoz Canada Inc. (Sandoz) in response to Sandoz’s filing of an ANDS seeking approval to market a generic version of IMBRUVICA capsules before the expiration of the ’116, ’913, ’787, and ’788 patents. Also in February 2023, Pharmacyclics and Janssen initiated a Statement of Claim under Section 8.2 of the Patented Medicines (Notice of Compliance) Regulations against Sandoz asserting the ’721 and ’256 patents, which are also listed in Health Canada’s Patent Register for IMBRUVICA. In these lawsuits, Pharmacyclics and Janssen Canada are seeking an order enjoining Sandoz from marketing its generic version of IMBRUVICA capsules before the expiration of the relevant patents. A trial date for these actions has not been set.

SYMTUZA

In November 2021, Janssen Products, L.P. and Janssen Sciences Ireland Unlimited Company (collectively, Janssen) and Gilead Sciences, Inc. and Gilead Sciences Ireland UC (collectively, Gilead) initiated a patent infringement lawsuit in the United States District Court for the District of Delaware against Lupin Limited, Lupin Pharmaceuticals, Inc., MSN Laboratories Private Ltd., MSN Life Sciences Private Ltd., and MSN Pharmaceuticals Inc. (collectively, Lupin), which filed an ANDA seeking approval to market a generic version of SYMTUZA before the expiration of U.S. Patent Nos. 10,039,718 (’718) and 10,786,518 (’518). The trial is scheduled to begin in October 2023.

In October 2022, Janssen Products, L.P. and Janssen Sciences Ireland Unlimited Company (collectively, Janssen) and Gilead Sciences, Inc. and Gilead Sciences Ireland UC (collectively, Gilead) initiated a patent infringement lawsuit in the United States District Court for the District of Delaware against Apotex Inc. and Apotex Corp. (collectively, Apotex), which filed an ANDA seeking approval to market a generic version of SYMTUZA before the expiration of the ’718 and ’518 patents.

In each of these U.S. lawsuits, Janssen is seeking an order enjoining the defendant from marketing a generic version of SYMTUZA before the expiration of the relevant patents.

ERLEADA

In May 2022, Aragon Pharmaceuticals, Inc. and Janssen Biotech, Inc. (collectively, Janssen) and Sloan Kettering Institute for Cancer Research (SKI) initiated patent infringement lawsuits in United States District Court for the Districts of New Jersey and Delaware against Lupin Limited and Lupin Pharmaceuticals, Inc. (collectively, Lupin), which filed an ANDA seeking approval to market a generic version of ERLEADA before the expiration of U.S. Patent No. 9,481,663 ('663). In August 2022, Janssen and SKI filed a first amended complaint against Lupin adding U.S. Patent Nos. 9,884,054 ('054), 10,052,314 ('314), 10,702,508 ('508) and 10,849,888 ('888) to the suit. Janssen and SKI are seeking an order enjoining Lupin from marketing its generic version of ERLEADA before the expiration of the '663, '054, '314, '508, and '888 patents. In August 2022, Janssen and SKI voluntarily dismissed the Delaware complaint. The New Jersey action is proceeding.

In May 2022, Janssen and SKI initiated a patent infringement lawsuit in United States District Court for the District of New Jersey against Zydus Worldwide DMCC, Zydus Pharmaceuticals (USA), Inc., and Zydus Lifesciences Limited (collectively, Zydus), which filed an ANDA seeking approval to market a generic version of ERLEADA before the expiration of the '663, '054, '314, '508, and '888 patents. Janssen and SKI are seeking an order enjoining Zydus from marketing its generic version of ERLEADA before the expiration of the '663, '054, '314, '508, and '888 patents.

In May 2022, Janssen, The Regents of the University of California (UC), and SKI initiated patent infringement lawsuits in United States District Court for the Districts of New Jersey and Delaware against Sandoz Inc. (Sandoz), which filed an ANDA seeking approval to market a generic version of ERLEADA before the expiration of the '663 patent and U.S. Patent Nos. 8,445,507 ('507), 8,802,689 ('689), 9,338,159 ('159), and 9,987,261 ('261). In August 2022, Janssen, UC, and SKI filed a first amended complaint against Sandoz adding the '054, '314, '508, and '888 patents to the suit. In August 2022, Janssen, UC, and SKI voluntarily dismissed the Delaware complaint. In December 2022, Janssen, UC, and SKI filed a second amended complaint against Sandoz withdrawing the '054, '314, '508, and '888 patents from the suit without prejudice. Janssen, UC, and SKI are seeking an order enjoining Sandoz from marketing its generic version of ERLEADA before the expiration of the '663, '507, '689, '159, and '261 patents. The New Jersey action is proceeding.

In May 2022, Janssen, UC, and SKI initiated patent infringement lawsuits in United States District Court for the Districts of New Jersey and Delaware against Eugia Pharma Specialities Limited, Aurobindo Pharma USA, Inc., and Auromedics Pharma LLC (collectively, Eugia), which filed an ANDA seeking approval to market a generic version of ERLEADA before the expiration of the '663, '507, '689, '159 and '261 patents. In September 2022, Janssen, UC, and SKI filed a first amended complaint against Eugia adding U.S. Patent Nos. 9,884,054 ('054), 10,052,314 ('314), 10,702,508 ('508) and 10,849,888 ('888) to the suit. In September 2022, Janssen, UC, and SKI voluntarily dismissed the Delaware complaint. Janssen, UC, and SKI are seeking an order enjoining Eugia from marketing its generic version of ERLEADA before the expiration of the '663,'507, '689, '159, '261, '054, '314, '508, and '888 patents. The New Jersey action is proceeding.

In May 2022, Janssen, UC, and SKI initiated patent infringement lawsuits in United States District Court for the Districts of New Jersey and Delaware against Hetero Labs Limited Unit V and Hetero USA, Inc. (collectively, Hetero), which filed an ANDA seeking approval to market a generic version of ERLEADA before the expiration of the '663, '507,'054, '314,'508, and '888 patents. Janssen, UC, and SKI are seeking an order enjoining Hetero from marketing its generic version of ERLEADA before the expiration of the '663, '507, '054, '314, '508 and '888 patents. In August 2022, Janssen, UC, and SKI voluntarily dismissed the Delaware complaint. The New Jersey action is proceeding.

UPTRAVI

In August 2022, Actelion Pharmaceuticals Ltd, and Janssen Inc. (collectively, Janssen) and Nippon Shinyaku Co. (Nippon Shinyaku) initiated a Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against Sandoz Canada Inc. in response to Sandoz's filing of an ANDS seeking approval to market generic versions of UPTRAVI tablets before the expiration of Canadian Patent Nos. 2,731,370 and 2,764,475. In this lawsuit, Janssen and Nippon Shinyaku are seeking an order enjoining Sandoz from marketing its generic version of UPTRAVI before the expiration of the relevant patents. A trial is scheduled to begin in May 2024.

In November 2022, Actelion Pharmaceuticals US Inc. and Actelion Pharmaceuticals Ltd (collectively, Actelion) and Nippon Shinyaku Co., Ltd. (Nippon Shinyaku) initiated a patent infringement lawsuit in the United States District Court for the District of Delaware against Alembic Pharmaceuticals Limited and Alembic Pharmaceuticals Inc. (collectively, Alembic) who filed an

ANDA seeking approval to market generic versions of UPTRAVI injection for intravenous use before expiration of U.S. Patent Nos. 8,791,122 ('122) and 9,284,280 ('280) relating to UPTRAVI. In this lawsuit, Actelion and Nippon Shinyaku are seeking an order enjoining Alembic from marketing a generic version of UPTRAVI before the expiration of the relevant patents. A trial date has not been set.

In February 2023, Actelion and Nippon Shinyaku initiated a patent infringement lawsuit in the United States District Court for the District of Delaware against Lupin Ltd. and Lupin Pharmaceuticals, Inc. (collectively, Lupin) who filed an ANDA seeking approval to market generic versions of UPTRAVI injection for intravenous use before expiration of the '122 and '280 patents relating to UPTRAVI. In this lawsuit, Actelion and Nippon Shinyaku are seeking an order enjoining Lupin from marketing a generic version of UPTRAVI before the expiration of the relevant patents. A trial date has not been set.

Other Litigation

In November 2021, Janssen Pharmaceutica N.V. (Janssen) provided to Alkermes Pharma Ireland Limited, Elan Pharma International Limited, and Elan Drug Delivery, Inc. three-months' notice of termination of a License Agreement by and among Elan Pharmaceutical Research Corp., d/b/a Nanosystems, Elan Pharma International Limited and Janssen, executed in March, 1999. In November 2021, Janssen also provided to Alkermes Pharma Ireland Limited three-months' notice of termination of a License Agreement between Elan Pharma International Limited and Janssen executed in July 2003. In April 2022, in response to these notices, Alkermes Pharma Ireland Limited (Alkermes) initiated arbitration in the International Institute for Conflict Prevention and Resolution. The parties exchanged opening briefs in July 2022 and responsive briefs in September 2022. In December 2022, the Arbitration Tribunal issued an Interim Decision finding that Janssen may terminate the agreements, but it may not continue to sell products developed during the term of the agreements without continuing to pay royalties to Alkermes.

GOVERNMENT PROCEEDINGS

Like other companies in the pharmaceutical, consumer health and medical devices industries, the Company and certain of its subsidiaries are subject to extensive regulation by national, state and local government agencies in the United States and other countries in which they operate. Such regulation has been the basis of government investigations and litigations. The most significant litigation brought by, and investigations conducted by, government agencies are listed below. It is possible that criminal charges and substantial fines and/or civil penalties or damages could result from government investigations or litigation.

Average Wholesale Price (AWP) Litigation

The Company and several of its pharmaceutical subsidiaries (the J&J AWP Defendants), along with numerous other pharmaceutical companies, were named as defendants in a series of lawsuits in state and federal courts involving allegations that the pricing and marketing of certain pharmaceutical products amounted to fraudulent and otherwise actionable conduct because, among other things, the companies allegedly reported an inflated Average Wholesale Price (AWP) for the drugs at issue. Payors alleged that they used those AWPs in calculating provider reimbursement levels. The plaintiffs in these cases included three classes of private persons or entities that paid for any portion of the purchase of the drugs at issue based on AWP, and state government entities that made Medicaid payments for the drugs at issue based on AWP. Many of these cases, both federal actions and state actions removed to federal court, were consolidated for pre-trial purposes in a multi-district litigation in the United States District Court for the District of Massachusetts, where all claims against the J&J AWP Defendants were ultimately dismissed. The J&J AWP Defendants also prevailed in a case brought by the Commonwealth of Pennsylvania. Other AWP cases have been resolved through court order or settlement. The case brought by Illinois was settled after trial. In New Jersey, a putative class action based upon AWP allegations is pending against Centocor, Inc. and Ortho Biotech Inc. (both now Janssen Biotech, Inc.), the Company and ALZA Corporation. All other cases have been resolved.

Opioid Litigation

Beginning in 2014 and continuing to the present, the Company and Janssen Pharmaceuticals, Inc. (JPI), along with other pharmaceutical companies, have been named in close to 3,500 lawsuits related to the marketing of opioids, including DURAGESIC, NUCYNTA and NUCYNTA ER. The suits also raise allegations related to previously owned active pharmaceutical ingredient supplier subsidiaries, Tasmanian Alkaloids Pty, Ltd. and Noramco, Inc. (both subsidiaries were divested in 2016). The majority of the cases have been filed by state and local governments. Similar lawsuits have also been filed by private plaintiffs and organizations, including but not limited to the following: individual plaintiffs on behalf of children born with Neonatal Abstinence Syndrome; hospitals; and health insurers/payors. To date, complaints against pharmaceutical manufacturers, including the Company and JPI, have been filed by the state Attorneys General in Arkansas, Florida, Idaho, Illinois, Kentucky, Louisiana, Mississippi, Missouri, Nevada, New Hampshire, New Jersey, New Mexico, New York, Ohio, Oklahoma, South Dakota, Texas, Washington and West Virginia. Complaints against the manufacturers also have been filed in state or federal court by city, county and local government agencies in every state but Alaska. The Government of Puerto Rico filed suit in Superior Court of San Juan.

The Company, JPI and other pharmaceutical companies had also received subpoenas or requests for information related to opioids marketing practices from the following state Attorneys General: Alaska, Indiana, Montana, New Hampshire, South Carolina, Tennessee, Texas and Washington. In September 2017, the Company and JPI were contacted by the Texas and Colorado Attorney General's Offices on behalf of approximately 38 states regarding a multi-state Attorney General investigation.

In 2019, the trial in the matter filed by the Oklahoma Attorney General resulted in a judgment against the Company and JPI in the amount of $465 million. The Company and JPI appealed the judgment, and in November 2021, the Oklahoma Supreme Court reversed the trial court's judgment and directed entry of judgment for Defendants. In October 2019 the Company and JPI announced a settlement of the first case set for trial in the MDL with two counties in Ohio. In April 2021, three California counties and the City of Oakland commenced a trial in California state court against the Company and JPI, and other affiliates, as well as three other pharmaceutical manufacturers. The trial concluded in October 2021, and in December 2021, the Court entered a final trial judgment in favor of Defendants on all claims. In February 2022, Plaintiffs' motion to set aside and vacate the judgment was denied. Plaintiffs appealed the judgment, but later filed a request to dismiss the appeal after electing to participate in the national settlement agreement.

In October 2019, the Company announced a proposed agreement in principle that would include the Company paying $4 billion as settlement of these matters that had not been tried or settled. In October 2020, the Company agreed to contribute up to an additional $1 billion to an all-in settlement amount that would resolve opioid lawsuits filed and future claims by states, cities, counties and tribal governments, for a total of $5 billion which has been accrued, subject to various conditions and an agreement being finalized. This agreement is not an admission of liability or wrong-doing. In July 2021, the Company announced that the terms of the agreement to settle the state and subdivision claims had been finalized and approximately half of the all-in settlement was expected to be paid by the end of fiscal year 2022, depending upon the level of participation by the states and their subdivisions. The terms provided a period of time for states to elect to participate in the agreement and, thereafter, a period for the subdivisions of the participating states to opt-in. Based on expected participation, the Company committed in advance to proceed with the settlement in five of the participating states (New York, Texas, Florida, Nevada, and New Mexico) and with tribal governments. By late February 2022, 45 states, five territories, the District of Columbia, and the vast majority of eligible subdivisions had elected to participate in the settlement, and the Company confirmed that the level of participation was sufficient to proceed with the agreement as to all participants. The agreement was effective in April 2022. Also in April 2022, the Company entered into settlement agreements with the states of Alabama and West Virginia and their participating subdivisions. In July 2022, the Company reached a settlement agreement with all litigating Oklahoma subdivisions, and in September 2022, the Company settled with the State of New Hampshire and its participating subdivisions. Consequently, by the end of the fiscal year 2022, the Company had settled the opioid claims advanced by all states except Washington.

There are approximately 60 cases remaining post-settlement in various state courts. There are approximately 570 remaining federal cases against the Company and JPI coordinated in a federal Multi-District Litigation (MDL) pending in the U.S. District Court for the Northern District of Ohio, and approximately 20 additional cases pending against the Company and JPI in other federal courts. In addition, the Province of British Columbia filed suit against the Company and its Canadian affiliate Janssen Inc., and many other industry members, in Canada, and is seeking to have that action certified as an opt in class action on behalf of other provincial/territorial and the federal governments in Canada. Additional proposed class actions have been filed in Canada against the Company and Janssen Inc., and many other industry members, by and on behalf of people who used opioids (for personal injuries), municipalities and First Nations bands. In October 2019, an antitrust complaint was filed by private plaintiffs in federal court in Tennessee and is pending transfer to the MDL. These actions allege a variety of claims related to opioid marketing practices, including false advertising, unfair competition, public nuisance, consumer fraud violations, deceptive acts and practices, false claims and unjust enrichment. The suits generally seek penalties and/or injunctive and monetary relief and, in some of the suits, the plaintiffs are seeking joint and several liability among the defendants. An adverse judgment in any of these lawsuits could result in the imposition of large monetary penalties and significant damages including, punitive damages, cost of abatement, substantial fines, equitable remedies and other sanctions.

In August 2019, the Company received a grand jury subpoena from the United States Attorney's Office for the Eastern District of New York for documents related to the Company's anti-diversion policies and procedures and distribution of its opioid medications, in what the Company understands to be part of a broader investigation into manufacturers' and distributors' monitoring programs and reporting under the Controlled Substances Act.

From June 2017 through December 2019, the Company's Board of Directors received a series of shareholder demand letters alleging breaches of fiduciary duties related to the marketing of opioids. The Board retained independent counsel to investigate the allegations in the demands, and in April 2020, independent counsel delivered a report to the Board recommending that the

Company reject the shareholder demands and take the steps that are necessary or appropriate to secure dismissal of related derivative litigation. The Board unanimously adopted the recommendations of the independent counsel's report.

In November 2019, one of the shareholders who sent a demand filed a derivative complaint against the Company as the nominal defendant and certain current and former directors and officers as defendants in the Superior Court of New Jersey. The complaint alleges breaches of fiduciary duties related to the marketing of opioids, and that the Company has suffered damages as a result of those alleged breaches. A series of additional derivative complaints making similar allegations against the same and similar defendants were filed in New Jersey state and federal courts in 2019 and 2020. By 2022, all but two state court cases had been voluntarily dismissed. In February 2022, the state court granted the Company's motion to dismiss one of the two cases, and the shareholder that brought the second case filed a notice of dismissal. The shareholder whose complaint was dismissed filed a motion for reconsideration. In May 2022, the state court held oral argument on the motion for reconsideration and subsequently denied the motion. The shareholder has appealed the state court's dismissal order.

Other

In August 2012, DePuy Orthopaedics, Inc., DePuy, Inc. (now known as DePuy Synthes, Inc.), and Johnson & Johnson Services, Inc. (collectively DePuy) received an informal request from the United States Attorney's Office for the District of Massachusetts and the Civil Division of the United States Department of Justice (the United States) for the production of materials relating to the DePuy ASR XL Hip device. In July 2014, the United States notified the United States District Court for the District of Massachusetts that it had declined to intervene in a *qui tam* case filed pursuant to the False Claims Act against the companies concerning the hip devices. In February 2016, the District Court granted the companies' motion to dismiss with prejudice, unsealed the *qui tam* complaint, and denied the *qui tam* relators' request for leave to file a further amended complaint. The *qui tam* relators appealed the case to the United States Court of Appeals for the First Circuit. In July 2017, the First Circuit affirmed the District Court's dismissal in part, reversed in part, and affirmed the decision to deny the relators' request to file a third amended complaint. In March 2021, DePuy filed its motion to strike and dismiss the relators' second amended complaint; the District Court denied DePuy's motion to strike and dismiss in July 2021. DePuy filed a motion for reconsideration of the District Court's July 2021 ruling. In November 2021, the District Court granted DePuy's motion for reconsideration and dismissed the case with prejudice. The District Court's order was unsealed in December 2021. The relators filed several post-dismissal motions, including a January 2022 omnibus motion for reconsideration, which the District Court denied. Following the District Court's order dismissing the case with prejudice, DePuy filed a December 2021 motion seeking the recovery of attorneys' fees and costs, which the District Court denied except as to costs. The Relators have appealed the District Court's dismissal of the case to the First Circuit. The briefing on the appeal is complete, the First Circuit held oral argument on December 6, 2022, and the First Circuit's decision remains pending.

In October 2012, the Company was contacted by the California Attorney General's office regarding a multi-state Attorney General investigation of the marketing of surgical mesh products for hernia and urogynecological purposes by the Company's subsidiary, Ethicon, Inc. (Ethicon). In May 2016, California and Washington filed civil complaints against the Company, Ethicon and Ethicon US, LLC alleging violations of their consumer protection statutes. Similar complaints were filed against the companies by the following states: Kentucky, Mississippi, West Virginia and Oregon. In April 2019, the Company and Ethicon settled the Washington case. In October 2019, the Company and Ethicon settled the multi-state investigation with 41 other states and the District of Columbia. In April 2020, the Company settled the West Virginia case. In October 2020, the Company settled with the Attorney General of Oregon. In November 2020, the Company settled with the Attorney General of Mississippi. Trial in the Kentucky matter is scheduled for June 2023. The California case started trial in July 2019 and concluded in September 2019. In January 2020, the Court in California issued a statement of decision, finding in favor of the State of California, and awarded civil penalties in the amount of $344 million. In April 2020, the Court in California denied the Company's motion for a new trial. In August 2020, the Court entered judgment with respect to the penalties of $344 million, but denied the Attorney General's request for injunctive relief. The Company appealed the penalty judgment. In April 2022, the Court of Appeals reduced the judgment to $302 million, but otherwise denied the appeal. In July 2022, the Supreme Court of California denied the Company's petition to review the Court of Appeals decision, and the Company recorded a charge to reflect the judgment in the second quarter of 2022. In November 2022, the Company petitioned the United States Supreme Court for review.

In June 2014, the Mississippi Attorney General filed a complaint in Chancery Court of The First Judicial District of Hinds County, Mississippi against the Company and Johnson & Johnson Consumer Companies, Inc. (now known as Johnson & Johnson Consumer Inc.) (collectively, JJCI). The complaint alleges that JJCI violated the Mississippi Consumer Protection Act by failing to disclose alleged health risks associated with female consumers' use of talc contained in JOHNSON'S Baby Powder and JOHNSON'S Shower to Shower (a product divested in 2012) and seeks injunctive and monetary relief. The Company and JJCI moved for summary judgment on the grounds that the State's claim was barred by preemption, which the trial court denied. The Mississippi Supreme Court granted the Company and JJCI's request to file an interlocutory appeal of the denial of the motion for summary judgment in late 2019. Briefing and oral argument were completed. Thereafter, the Court

rejected the interlocutory appeal in April 2021 and remanded the matter to the trial court. In August 2021, JJCI filed a Petition for Writ of Certiorari in the United States Supreme Court as to the Mississippi Supreme Court's ruling of April 2021. In December 2021 the United States Supreme Court denied the Petition for Writ of Certiorari. After the Mississippi Supreme Court remanded the matter to the trial court, the State moved for a trial setting. JJCI objected to any trial setting as barred by the stay arising from the LTL Bankruptcy Case, referenced above, while the State argued that the stay did not apply. In January 2022, the Court granted the State's motion for trial setting and directed the parties to consult with the Court administrator to secure a trial date. In February 2022, the trial court set the case for trial to begin in February 2023. However, given the efforts to resolve talc-related claims in the LTL Bankruptcy Case, the Company and the State agreed to a temporary stay of discovery until May 2022. The temporary stay expired in May 2022. LTL thereafter moved to enjoin prosecution of the case in the LTL Bankruptcy Case. In October 2022, the bankruptcy court issued an order staying the case. The State filed an appeal to the Third Circuit concerning the stay order.

In January 2020, the State of New Mexico filed a consumer protection case alleging that the Company deceptively marketed and sold its talcum powder products by making misrepresentations about the safety of the products and the presence of carcinogens, including asbestos. The State of New Mexico filed an Amended Complaint in March 2020. The Company moved to dismiss certain of the claims in the Amended Complaint, which was granted. The Company then filed a motion for partial judgment on the pleadings in December 2020, which was denied. In March 2022, the New Mexico court denied the Company's motion to compel the State of New Mexico to engage in discovery of state agencies and denied the Company's request for interlocutory appeal of that decision. The Company then filed a Petition for Writ of Superintending Control and a Request for a Stay to the New Mexico Supreme Court on the issue of the State of New Mexico's discovery obligations. In April 2022, in view of the efforts to resolve talc-related claims in the LTL Bankruptcy Case, the Company and the State agreed to a 60-day stay of all matters except for the pending writ before the New Mexico Supreme Court, which expired in June 2022. Thereafter, the Company moved to enjoin prosecution of the case in the LTL Bankruptcy Case. In October 2022, the bankruptcy court issued an order staying the case. In December 2022, the State filed an appeal to the Third Circuit concerning the stay order. Separately, in September 2022, the New Mexico Supreme Court granted the Company's request for a stay pending further briefing on the scope of the State of New Mexico's discovery obligations.

Forty-two states and the District of Columbia have commenced a joint investigation into the Company's marketing of its talcum powder products. At this time, the multi-state group has not asserted any claims against the Company. Five states have issued Civil Investigative Demands seeking documents and other information. The Company has produced documents to Arizona, North Carolina, Texas, and Washington and entered into confidentiality agreements. The Company has not received any follow up requests from those states. In March 2022, each of the forty-two states (including Mississippi and New Mexico) agreed to mediation of their claims in the LTL Bankruptcy Case. In July 2022, New Mexico and Mississippi indicated they would no longer voluntarily submit to further mediation in the LTL Bankruptcy and would proceed with their respective cases in state court. LTL moved the New Jersey Bankruptcy Court for an order staying further proceedings in those two actions, which the Bankruptcy Court granted in October 2022. In December 2022, the Bankruptcy Court allowed New Mexico and Mississippi to file a direct appeal of its stay.

In July 2016, the Company and Janssen Products, LP were served with a qui tam complaint pursuant to the False Claims Act filed in the United States District Court for the District of New Jersey alleging the off-label promotion of two HIV products, PREZISTA and INTELENCE, and anti-kickback violations in connection with the promotion of these products. The complaint was filed under seal in December 2012. The federal and state governments have declined to intervene, and the lawsuit is being prosecuted by the relators. The Court denied summary judgment on all claims in December 2021. Daubert motions were granted in part and denied in part in January 2022, and the case is proceeding to trial.

In March 2017, Janssen Biotech, Inc. (JBI) received a Civil Investigative Demand from the United States Department of Justice regarding a False Claims Act investigation concerning management and advisory services provided to rheumatology and gastroenterology practices that purchased REMICADE or SIMPONI ARIA. In August 2019, the United States Department of Justice notified JBI that it was closing the investigation. Subsequently, the United States District Court for the District of Massachusetts unsealed a qui tam False Claims Act complaint, which was served on the Company. The Department of Justice had declined to intervene in the qui tam lawsuit in August 2019. The Company filed a motion to dismiss, which was granted in part and denied in part. Discovery is underway.

In April and September 2017, the Company received subpoenas from the United States Attorney for the District of Massachusetts seeking documents broadly relating to pharmaceutical copayment support programs for DARZALEX, OLYSIO, REMICADE, SIMPONI, STELARA and ZYTIGA. The subpoenas also seek documents relating to Average Manufacturer Price and Best Price reporting to the Center for Medicare and Medicaid Services related to those products, as well as rebate payments to state Medicaid agencies. The Company has provided documents in response to the subpoenas.

In June 2017, the Company received a subpoena from the United States Attorney's Office for the District of Massachusetts seeking information regarding practices pertaining to the sterilization of DePuy Synthes, Inc. (DePuy) spinal implants at three hospitals in Boston as well as interactions of employees of Company subsidiaries with physicians at these hospitals. The Company and DePuy fully cooperated with the government's investigation. In January 2023, the Company, DePuy Synthes, Inc., and DePuy Synthes Sales Inc. entered into a settlement agreement with the United States resolving the matter for an immaterial amount.

In July 2018, the Public Prosecution Service in Rio de Janeiro and representatives from the Brazilian antitrust authority CADE inspected the offices of more than 30 companies including Johnson & Johnson do Brasil Indústria e Comércio de Produtos para Saúde Ltda. The authorities appear to be investigating allegations of possible anti-competitive behavior and possible improper payments in the medical device industry. The Company continues to respond to inquiries regarding the Foreign Corrupt Practices Act from the United States Department of Justice and the United States Securities and Exchange Commission.

From time to time, the Company has received requests from a variety of United States Congressional Committees to produce information relevant to ongoing congressional inquiries. It is the policy of Johnson & Johnson to cooperate with these inquiries by producing the requested information.

GENERAL LITIGATION

Beginning in September 2017, multiple purported class actions were filed on behalf of indirect purchasers of REMICADE against the Company and Janssen Biotech, Inc. (collectively, Janssen) alleging that Janssen has violated federal antitrust laws through its contracting strategies for REMICADE. The cases were consolidated for pre-trial purposes as *In re REMICADE Antitrust Litigation* in United States District Court for the Eastern District of Pennsylvania. This case was settled in February 2022. The final approval hearing is scheduled for February 2023.

In June 2019, the United States Federal Trade Commission (FTC) issued a Civil Investigative Demand to the Company and Janssen Biotech, Inc. (collectively, Janssen) in connection with its investigation of whether Janssen's REMICADE contracting practices violate federal antitrust laws. The Company has produced documents and information responsive to the Civil Investigative Demand. Janssen is in ongoing discussions with the FTC staff regarding its inquiry.

In February 2022, the United States Federal Trade Commission (FTC) issued Civil Investigative Demands to Johnson & Johnson and Janssen Biotech, Inc. (collectively, Janssen) in connection with its investigation of whether advertising practices for REMICADE violate federal law. Janssen has produced documents and information responsive to the Civil Investigative Demands. Janssen is in ongoing discussions with the FTC staff regarding the inquiry.

In June 2022, Genmab A/S filed a Notice for Arbitration with International Institute for Conflict Prevention and Resolution (CPR) against Janssen Biotech, Inc. seeking milestones and an extended royalty term for Darzalex FASPRO. Janssen filed its Notice of Defense in July 2022. Genmab and Janssen have cross-moved for early disposition of the arbitration. Argument was had in January 2023.

In October 2017, certain United States service members and their families brought a complaint against a number of pharmaceutical and medical devices companies, including Johnson & Johnson and certain of its subsidiaries in United States District Court for the District of Columbia, alleging that the defendants violated the United States Anti-Terrorism Act. The complaint alleges that the defendants provided funding for terrorist organizations through their sales practices pursuant to pharmaceutical and medical device contracts with the Iraqi Ministry of Health. In July 2020, the District Court dismissed the complaint. In January 2022, the United States Court of Appeals for the District of Columbia Circuit reversed the District Court's decision. In February 2022, defendants petitioned for rehearing en banc.

In October 2018, two separate putative class actions were filed against Actelion Pharmaceutical Ltd., Actelion Pharmaceuticals U.S., Inc., and Actelion Clinical Research, Inc. (collectively Actelion) in United States District Court for the District of Maryland and United States District Court for the District of Columbia. The complaints allege that Actelion violated state and federal antitrust and unfair competition laws by allegedly refusing to supply generic pharmaceutical manufacturers with samples of TRACLEER. TRACLEER is subject to a Risk Evaluation and Mitigation Strategy required by the Food and Drug Administration, which imposes restrictions on distribution of the product. In January 2019, the plaintiffs dismissed the District of Columbia case and filed a consolidated complaint in the United States District Court for the District of Maryland. In October 2019, the Court granted Actelion's motion to dismiss the amended complaint. In April 2021, the United States Court of Appeals for the Fourth Circuit reversed and remanded. Discovery is ongoing.

In May 2019, a class action antitrust complaint was filed against Janssen R&D Ireland (Janssen) and Johnson & Johnson in the United States District Court for the Northern District of California. The complaint alleges that Janssen violated federal and state

antitrust and consumer protection laws by agreeing to exclusivity provisions in its agreements with Gilead concerning the development and marketing of combination antiretroviral therapies (cART) to treat HIV. The complaint also alleges that Gilead entered into similar agreements with Bristol-Myers Squibb and Japan Tobacco. In March 2020, the Court granted in part and denied in part defendants' motions to dismiss. Plaintiffs filed an amended complaint in April 2020. Defendants moved to dismiss the amended complaint. In July 2020, the Court granted in part and denied in part the renewed motion to dismiss. In December 2021, several insurance companies and other payers filed individual "Opt-Out" complaints containing allegations similar to the original complaint. In September 2022, the Court granted in part and denied in part plaintiff's motion for class certification. In January 2023, the Court granted in part and denied in part defendants' motion for summary judgment. Trial is scheduled for May 2023.

In October 2019, Innovative Health, LLC filed a complaint against Biosense Webster, Inc. (BWI) in the United States District Court for the Middle District of California. The complaint alleges that certain of BWI's business practices and contractual terms violate the antitrust laws of the United States and the State of California by restricting competition in the sale of High Density Mapping Catheters and Ultrasound Catheters. In January 2020, BWI filed a motion to dismiss the complaint. In August 2020, the Court granted in part and denied in part BWI's motion to dismiss. In December 2021, BWI filed a motion for summary judgment. In March 2022, the Court granted BWI's motion for summary judgment. In April 2022, Innovative appealed this ruling to the United States Court of Appeals for the Ninth Circuit.

In November 2019, the Company received a demand for indemnification from Pfizer Inc. (Pfizer), pursuant to the 2006 Stock and Asset Purchase Agreement between the Company and Pfizer. Also in November 2019, Johnson & Johnson Inc. received notice reserving rights to claim indemnification from Sanofi Consumer Health, Inc. (Sanofi), pursuant to the 2016 Asset Purchase Agreement between Johnson & Johnson Inc. and Sanofi. In January 2020, Johnson & Johnson received a demand for indemnification from Boehringer Ingelheim Pharmaceuticals, Inc. (Boehringer Ingelheim), pursuant to the 2006 Asset Purchase Agreement among the Company, Pfizer, and Boehringer Ingelheim. In November 2022, Johnson & Johnson received a demand for indemnification from GlaxoSmithKline LLC (GSK), pursuant to the 2006 Stock and Asset Purchase Agreement between the Company and Pfizer, and certain 1993, 1998, and 2002 agreements between Glaxo Wellcome and Warner-Lambert entities. The notices seek indemnification for legal claims related to over-the-counter ZANTAC (ranitidine) products. Plaintiffs in the underlying actions allege that ZANTAC and other over-the-counter ranitidine medications contain unsafe levels of NDMA (N-nitrosodimethylamine) and can cause and/or have caused various cancers in patients using the products, and seek injunctive and monetary relief. The Company and Johnson & Johnson Inc. have also been named in putative class actions filed in Canada with similar allegations regarding ZANTAC or ranitidine use. Johnson & Johnson Inc. was also named as a defendant along with other manufacturers in various personal injury actions in Canada related to ZANTAC products. Johnson & Johnson Inc. has provided Sanofi notice reserving rights to claim indemnification pursuant to the 2016 Asset Purchase Agreement related to the class actions and personal injury actions.

In October 2020, Fortis Advisors LLC (Fortis), in its capacity as representative of the former stockholders of Auris Health Inc. (Auris), filed a complaint against the Company, Ethicon Inc., and certain named officers and employees (collectively, Ethicon) in the Court of Chancery of the State of Delaware. The complaint alleges breach of contract, fraud, and other causes of action against Ethicon in connection with Ethicon's acquisition of Auris in 2019. The complaint seeks damages and other relief. In December 2021, the Court granted in part and denied in part defendants' motion to dismiss certain causes of action. All claims against the individual defendants were dismissed. The trial is scheduled for January 2024.

In June 2022, Janssen Pharmaceuticals, Inc. filed a Demand for Arbitration against Emergent Biosolutions Inc. et al ("EBSI") with the American Arbitration Association, alleging that EBSI breached the parties' Manufacturing Services Agreement for the Company's COVID-19 vaccine. In July 2022, Emergent filed its answering statement and counterclaims.

In October 2022, Janssen Pharmaceuticals, Inc. filed a Demand for Arbitration against Merck Sharp & Dohme Corp. with the American Arbitration Association pursuant to the Parties' agreements relating to production of drug substance and drug product for the Company's COVID-19 vaccine. Also in October 2022, Merck filed its answer and counterclaims.

Beginning in May 2021, multiple putative class actions were filed in state and federal courts (California, Florida, New York, and New Jersey) against various Johnson & Johnson entities alleging violations of state consumer fraud statutes based on nondisclosure of alleged benzene contamination of certain Neutrogena and Aveeno sunscreen products and the affirmative promotion of those products as "safe"; and, in at least one case, alleging a strict liability manufacturing defect and failure to warn claims, asserting that the named plaintiffs suffered unspecified injuries as a result of alleged exposure to benzene. The Judicial Panel on Multi-District Litigation has consolidated all pending actions, except one product liability case and one case pending in New Jersey state court, in the United States District Court for the Southern District of Florida, Fort Lauderdale Division. In October 2021, the Company reached an agreement in principle for the settlement of a nationwide class, encompassing the claims of the consolidated actions, subject to approval by the Florida federal Court. In December 2021,

plaintiffs in the consolidated actions filed a motion for preliminary approval of a nationwide class settlement. The settlement was preliminarily approved by the court in March 2022.

The Company (subsequently substituted by Johnson & Johnson Consumer Inc. (JJCI)) along with more than 120 other companies, is a defendant in a cost recovery and contribution action brought by Occidental Chemical Corporation in June 2018 in the United States District Court for the District of New Jersey, related to the clean-up of a section of the Lower Passaic River in New Jersey.

The Company or its subsidiaries are also parties to various proceedings brought under the Comprehensive Environmental Response, Compensation, and Liability Act, commonly known as Superfund, and comparable state, local or foreign laws in which the primary relief sought is the cost of past and/or future remediation.

20. Restructuring

In the fiscal second quarter of 2018, the Company announced plans to implement a series of actions across its Global Supply Chain that are intended to focus resources and increase investments in the critical capabilities, technologies and solutions necessary to manufacture and supply its product portfolio, enhance agility and drive growth. The Global Supply Chain actions include expanding the use of strategic collaborations and bolstering initiatives to reduce complexity, improve cost-competitiveness, enhance capabilities and optimize the Supply Chain network. In fiscal year 2022, the Company recorded a pre-tax charge of $0.5 billion, which is included on the following lines of the Consolidated Statement of Earnings, $0.3 billion in restructuring, $0.1 billion in other (income) expense and $0.1 billion in cost of products sold. Total project costs of approximately $2.2 billion have been recorded since the restructuring was announced. The program was completed in the fiscal fourth quarter of 2022.

The following table summarizes the severance charges and the associated spending under these initiatives through the fiscal year ended 2022:

(Dollars in Millions)	Severance	Asset Write-offs/Sales	Other[2]	Total
Reserve balance, January 3, 2021	$ 135	—	9	144
2021 activity	(23)	—	16	(7)
Reserve balance, January 2, 2022	112	—	25	137
Current year activity:				
Charges	—	15	448	463
Cash settlements	(37)	44 [3]	(439)	(432)
Settled non cash	—	(59)		(59)
Reserve balance, January 1, 2023[1]	$ 75	—	34	109

[1] Although the restructuring program has been completed in the fiscal year 2022, the Company expects that severance charges will continue beyond that date. The reserve balance as of January 1, 2023 is recorded in the Employee Related Obligation account in the Consolidated Balance Sheet.
[2] Other includes project expense such as salaries for employees supporting these initiatives and consulting expenses.
[3] Represents gain on sale of assets

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of Johnson & Johnson

Opinions on the Financial Statements and Internal Control over Financial Reporting

We have audited the accompanying consolidated balance sheets of Johnson & Johnson and its subsidiaries (the "Company") as of January 1, 2023 and January 2, 2022, and the related consolidated statements of earnings, of comprehensive income, of equity and of cash flows for each of the three fiscal years in the period ended January 1, 2023, including the related notes (collectively referred to as the "consolidated financial statements"). We also have audited the Company's internal control over financial reporting as of January 1, 2023, based on criteria established in Internal Control - Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of January 1, 2023 and January 2, 2022, and the results of its operations and its cash flows for each of the three fiscal years in the period ended January 1, 2023 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of January 1, 2023, based on criteria established in Internal Control - Integrated Framework (2013) issued by the COSO.

Basis for Opinions

The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express opinions on the Company's consolidated financial statements and on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the consolidated financial statements included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

As described in Management's Report on Internal Control Over Financial Reporting, management has excluded Abiomed, Inc., ("Abiomed") from its assessment of internal control over financial reporting as of January 1, 2023, because it was acquired by the Company in a business combination during 2022. We have also excluded Abiomed from our audit of internal control over financial reporting. Abiomed is a wholly-owned subsidiary whose total assets and total sales excluded from management's assessment and our audit of internal control over financial reporting represent less than 1% of each of the related consolidated financial statement amounts as of and for the fiscal year ended January 1, 2023.

Definition and Limitations of Internal Control over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Critical Audit Matters

The critical audit matters communicated below are matters arising from the current period audit of the consolidated financial statements that were communicated or required to be communicated to the audit committee and that (i) relate to accounts or disclosures that are material to the consolidated financial statements and (ii) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matters below, providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

U.S. Pharmaceutical Rebate Reserves – Managed Care, Medicare and Medicaid

As described in Note 1 to the consolidated financial statements, the Company recognizes revenue from product sales when obligations under the terms of a contract with the customer are satisfied. Rebates and discounts provided to customers are accounted for as variable consideration and recorded as a reduction in sales. The liability for such rebates and discounts is recognized within Accrued Rebates, Returns, and Promotions on the consolidated balance sheet. A significant portion of the liability related to rebates is from the sale of pharmaceutical goods within the U.S., primarily the Managed Care, Medicare and Medicaid programs, which amounted to $9.6 billion as of January 1, 2023. For significant rebate programs, which include the U.S. Managed Care, Medicare and Medicaid rebate programs, rebates and discounts estimated by management are based on contractual terms, historical experience, patient outcomes, trend analysis, and projected market conditions in the U.S. pharmaceutical market.

The principal considerations for our determination that performing procedures relating to U.S. pharmaceutical rebate reserves - Managed Care, Medicare and Medicaid is a critical audit matter are the significant judgment by management due to the significant measurement uncertainty involved in developing these reserves and the high degree of auditor judgment, subjectivity and audit effort in performing procedures and evaluating the assumptions related to contractual terms, historical experience, patient outcomes, trend analysis, and projected market conditions in the U.S. pharmaceutical market.

Addressing the matter involved performing procedures and evaluating audit evidence in connection with forming our overall opinion on the consolidated financial statements. These procedures included testing the effectiveness of controls relating to U.S. pharmaceutical rebate reserves - Managed Care, Medicare and Medicaid, including controls over the assumptions used to estimate these rebates. These procedures also included, among others, (i) developing an independent estimate of the rebates by utilizing third party information on price and market conditions in the U.S. pharmaceutical market, the terms of the specific rebate programs, and the historical experience and trend analysis of actual rebate claims paid; (ii) testing rebate claims processed by the Company, including evaluating those claims for consistency with the contractual and mandated terms of the Company's rebate arrangements; and (iii) comparing the independent estimates to management's estimates.

Litigation Contingencies – Talc

As described in Notes 1 and 19 to the consolidated financial statements, the Company records accruals for loss contingencies associated with legal matters, including talc, when it is probable that a liability will be incurred and the amount of the loss can be reasonably estimated. To the extent adverse awards, judgments, or verdicts have been rendered against the Company, management does not record an accrual until a loss is determined to be probable and can be reasonably estimated. For these matters, management is unable to estimate the possible loss or range of loss beyond the amounts accrued. Amounts accrued for legal contingencies often result from a complex series of judgments about future events and uncertainties that rely heavily on estimates and assumptions including timing of related payments. The ability to make such estimates and judgments can be affected by various factors, including, among other things, whether damages sought in the proceedings are unsubstantiated or indeterminate; scientific and legal discovery has not commenced or is not complete; proceedings are in early stages; matters present legal uncertainties; there are significant facts in dispute; procedural or jurisdictional issues; the uncertainty and unpredictability of the number of potential claims; ability to achieve comprehensive multi-party settlements; complexity of related cross-claims and counterclaims; and/or there are numerous parties involved. Management continues to believe that the Company has strong legal grounds to contest the talc verdicts it has appealed. Notwithstanding management's confidence in the safety of the Company's talc products, in certain circumstances the Company has settled cases. In October 2021, Johnson & Johnson Consumer Inc. (Old JJCI), a wholly-owned subsidiary of Johnson & Johnson, implemented a corporate restructuring and created a subsidiary, LTL Management LLC (LTL), which became solely responsible for the talc-related liabilities, and another subsidiary, New JJCI, which became responsible for the remaining business of Old JJCI. LTL filed a voluntary petition, seeking relief under chapter 11 of the Bankruptcy Code. As a result of the LTL bankruptcy case, the Court entered a temporary restraining order staying all litigation against LTL and Old JJCI. On November 15, 2021, the North Carolina Bankruptcy Court confirmed the scope of the stay, issuing a Preliminary Injunction (PI) prohibiting and enjoining the commencement and prosecution of talc-related claims against LTL, Old JJCI, New JJCI, Johnson & Johnson, other of their corporate affiliates, identified retailers, insurance companies, and certain other parties. The LTL Bankruptcy Case was transferred to the United States Bankruptcy Court for the District of New Jersey in November 2021, and that court extended the PI through the end of

February 2022. Claimants filed motions to dismiss the LTL Bankruptcy Case and, following a multiple day hearing, the New Jersey Bankruptcy Court denied those motions by order issued in March 2022. The New Jersey Bankruptcy Court simultaneously issued another order extending the stay as to the Protected Parties. The claimants subsequently filed notices of appeal as to the denial of the motions to dismiss and the extension of the stay. In May 2022,the Third Circuit Court of Appeals granted the petitions to appeal. The briefing and oral argument on the appeal were completed in September 2022. On January 30, 2023, the Third Circuit reversed the Bankruptcy Court's ruling and remanded to the Bankruptcy Court to dismiss the LTL bankruptcy. LTL has filed a petition for rehearing on the decision.

The principal considerations for our determination that performing procedures relating to the talc litigation is a critical audit matter are the significant judgment by management when assessing the likelihood of a loss being incurred and when determining whether a reasonable estimate of the loss or range of loss for the future and existing talc claims can be made, which in turn led to a high degree of auditor judgment, subjectivity and effort in performing procedures and evaluating management's assessment of the loss contingencies associated with this litigation.

Addressing the matter involved performing procedures and evaluating audit evidence in connection with forming our overall opinion on the consolidated financial statements. These procedures included testing the effectiveness of controls relating to management's evaluation of the talc litigation, including controls over determining whether a loss is probable and whether the amount of loss can be reasonably estimated, as well as financial statement disclosures. These procedures also included, among others, (i) gaining an understanding of the Company's process around the accounting and reporting for the talc litigation; (ii) discussing the status of significant known actual and potential litigation and the ongoing LTL bankruptcy proceedings with the Company's in-house legal counsel, as well as external counsel when deemed necessary; (iii) obtaining and evaluating the letters of audit inquiry with internal and external legal counsel for significant litigation; (iv) evaluating the reasonableness of management's assessment regarding whether an unfavorable outcome is reasonably possible or probable and reasonably estimable; and (v) evaluating the sufficiency of the Company's litigation contingencies disclosures.

We have served as the Company's auditor since at least 1920. We have not been able to determine the specific year we began serving as auditor of the Company.

Management's Report on Internal Control Over Financial Reporting

Under Section 404 of the Sarbanes-Oxley Act of 2002, management is required to assess the effectiveness of the Company's internal control over financial reporting as of the end of each fiscal year and report, based on that assessment, whether the Company's internal control over financial reporting is effective.

Management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting is designed to provide reasonable assurance as to the reliability of the Company's financial reporting and the preparation of external financial statements in accordance with generally accepted accounting principles.

Internal controls over financial reporting, no matter how well designed, have inherent limitations. Therefore, internal control over financial reporting determined to be effective can provide only reasonable assurance with respect to financial statement preparation and may not prevent or detect all misstatements. Moreover, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

The Company's management has assessed the effectiveness of the Company's internal control over financial reporting as of January 1, 2023. In making this assessment, the Company used the criteria established by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in "Internal Control-Integrated Framework (2013)." These criteria are in the areas of control environment, risk assessment, control activities, information and communication, and monitoring. The Company's assessment included extensive documenting, evaluating and testing the design and operating effectiveness of its internal controls over financial reporting.

The Company acquired Abiomed, Inc. (Abiomed), in a business combination in December 2022. Abiomed's total assets, excluding intangible assets and goodwill, and total sales represented less than 1% of each of the related consolidated financial statement amounts as of and for the fiscal year ended January 1, 2023. As the acquisition occurred in the fiscal year 2022, the scope of the Company's assessment of the design and effectiveness of internal control over financial reporting for the fiscal year 2022 excluded the above mentioned acquisition. This exclusion is in accordance with the SEC's general guidance that an assessment of a recently acquired business may be omitted from the scope in the year of acquisition.

Based on the Company's processes and assessment, as described above, management has concluded that, as of January 1, 2023, the Company's internal control over financial reporting was effective.

The effectiveness of the Company's internal control over financial reporting as of January 1, 2023 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report, which appears herein.

Item 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

Not applicable.

Item 9A. CONTROLS AND PROCEDURES

Disclosure Controls and Procedures. At the end of the period covered by this Report, the Company evaluated the effectiveness of the design and operation of its disclosure controls and procedures. The Company's disclosure controls and procedures are designed to ensure that information required to be disclosed by the Company in the reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by the Company in the reports that it files or submits under the Exchange Act is accumulated and communicated to the Company's management, including its principal executive and principal financial officers, or persons performing similar functions, as appropriate to allow timely decisions regarding required disclosure. Joaquin Duato, Chairman and Chief Executive Officer, and Joseph J. Wolk, Executive Vice President, Chief Financial Officer, reviewed and participated in this evaluation. Based on this evaluation, Messrs. Duato and Wolk concluded that, as of the end of the period covered by this Report, the Company's disclosure controls and procedures were effective.

Reports on Internal Control Over Financial Reporting. The information called for by this item is incorporated herein by reference to "Management's Report on Internal Control Over Financial Reporting", and the attestation regarding internal controls over financial reporting included in the "Report of Independent Registered Public Accounting Firm" included in Item 8 of this Report.

Changes in Internal Control Over Financial Reporting. During the fiscal quarter ended January 1, 2023, there were no changes in the Company's internal control over financial reporting identified in connection with the evaluation required under Rules 13a-15 and 15d-15 under the Exchange Act that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting. The Company continues to monitor and assess the effectiveness of the design and operation of its disclosure controls and procedures.

The Company is implementing a multi-year, enterprise-wide initiative to integrate, simplify and standardize processes and systems for the human resources, information technology, procurement, supply chain and finance functions. These are enhancements to support the growth of the Company's financial shared service capabilities and standardize financial systems. This initiative is not in response to any identified deficiency or weakness in the Company's internal control over financial reporting. In response to this initiative, the Company has and will continue to align and streamline the design and operation of its financial control environment.

PART III

Item 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

The information called for by this item is incorporated herein by reference to the discussion of the Audit Committee under the caption "Item 1. Election of Directors - Board Committees"; and the material under the captions "Item 1. Election of Directors" and, if applicable, "Stock Ownership and Section 16 Compliance – Delinquent Section 16(a) Reports" in the Proxy Statement; and the material under the caption "Executive Officers of the Registrant" in Part I of this Report.

The Company's Code of Business Conduct, which covers all employees (including the Chief Executive Officer, Chief Financial Officer and Controller), meets the requirements of the SEC rules promulgated under Section 406 of the Sarbanes-Oxley Act of 2002. The Code of Business Conduct is available on the Company's website at *www.jnj.com/code-of-business-conduct*, and copies are available to shareholders without charge upon written request to the Secretary at the Company's principal executive offices. Any substantive amendment to the Code of Business Conduct or any waiver of the Code granted to the Chief Executive Officer, the Chief Financial Officer or the Controller will be posted on the Company's website at *www.investor.jnj.com/gov.cfm* within five business days (and retained on the website for at least one year).

In addition, the Company has adopted a Code of Business Conduct & Ethics for Members of the Board of Directors and Executive Officers. The Code of Business Conduct & Ethics for Members of the Board of Directors and Executive Officers

is available on the Company's website at *www.investor.jnj.com/gov/boardconduct.cfm*, and copies are available to shareholders without charge upon written request to the Secretary at the Company's principal executive offices. Any substantive amendment to the Code or any waiver of the Code granted to any member of the Board of Directors or any executive officer will be posted on the Company's website at *www.investor.jnj.com/gov.cfm* within five business days (and retained on the website for at least one year).

Item 11. EXECUTIVE COMPENSATION

The information called for by this item is incorporated herein by reference to the material under the captions "Item 1. Election of Directors – Director Compensation," and "Item 2. Compensation & Benefits Committee Report," "Compensation Discussion and Analysis" and "Executive Compensation Tables" in the Proxy Statement.

The material incorporated herein by reference to the material under the caption "Compensation & Benefits Committee Report" in the Proxy Statement shall be deemed furnished, and not filed, in this Report and shall not be deemed incorporated by reference into any filing under the Securities Act of 1933, as amended, or the Securities Exchange Act of 1934, as amended, as a result of this furnishing, except to the extent that the Company specifically incorporates it by reference.

Item 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

The information called for by this item is incorporated herein by reference to the material under the caption "Item 1. Stock Ownership and Section 16 Compliance" in the Proxy Statement; and Note 16 "Common Stock, Stock Option Plans and Stock Compensation Agreements" of the Notes to Consolidated Financial Statements in Item 8 of this Report.

Equity Compensation Plan Information

The following table provides certain information as of January 1, 2023 concerning the shares of the Company's Common Stock that may be issued under existing equity compensation plans.

Plan Category	Number of Securities to be Issued Upon Exercise of Outstanding Options and Rights	Weighted Average Exercise Price of Outstanding Options and Rights	Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans[2][3]
Equity Compensation Plans Approved by Security Holders[1]	134,644,525	$118.94	149,652,710
Equity Compensation Plans Not Approved by Security Holders	-	-	-
Total	134,644,525	$118.94	149,652,710

(1) Included in this category are the following equity compensation plans which have been approved by the Company's shareholders: 2012 Long-Term Incentive Plan and 2022 Long-Term Incentive Plan.

(2) This column excludes shares reflected under the column "Number of Securities to be Issued Upon Exercise of Outstanding Options and Rights."

(3) The 2012 Long-Term Incentive Plan expired April 26, 2022. All options and restricted shares granted subsequent to that date were under the 2022 Long-Term Incentive Plan.

Item 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

The information called for by this item is incorporated herein by reference to the material under the captions "Item 1. Election of Directors - Director Independence" and "Related Person Transactions" in the Proxy Statement.

Item 14. PRINCIPAL ACCOUNTANT FEES AND SERVICES

The information called for by this item is incorporated herein by reference to the material under the caption "Item 3. Ratification of Appointment of Independent Registered Public Accounting Firm" in the Proxy Statement.

2023 Annual Report

Johnson & Johnson

Our Credo

We believe our first responsibility is to the patients, doctors and nurses, to mothers and fathers and all others who use our products and services. In meeting their needs everything we do must be of high quality. We must constantly strive to provide value, reduce our costs and maintain reasonable prices. Customers' orders must be serviced promptly and accurately. Our business partners must have an opportunity to make a fair profit.

We are responsible to our employees who work with us throughout the world. We must provide an inclusive work environment where each person must be considered as an individual. We must respect their diversity and dignity and recognize their merit. They must have a sense of security, fulfillment and purpose in their jobs. Compensation must be fair and adequate and working conditions clean, orderly and safe. We must support the health and well-being of our employees and help them fulfill their family and other personal responsibilities. Employees must feel free to make suggestions and complaints. There must be equal opportunity for employment, development and advancement for those qualified. We must provide highly capable leaders and their actions must be just and ethical.

We are responsible to the communities in which we live and work and to the world community as well. We must help people be healthier by supporting better access and care in more places around the world. We must be good citizens — support good works and charities, better health and education, and bear our fair share of taxes. We must maintain in good order the property we are privileged to use, protecting the environment and natural resources.

Our final responsibility is to our stockholders. Business must make a sound profit. We must experiment with new ideas. Research must be carried on, innovative programs developed, investments made for the future and mistakes paid for. New equipment must be purchased, new facilities provided and new products launched. Reserves must be created to provide for adverse times. When we operate according to these principles, the stockholders should realize a fair return.

Johnson&Johnson

Dear shareholders,

2023 was a defining moment in Johnson & Johnson's 138-year history.

It was a year of transformation and growth that has positioned our company to be a leader in global healthcare for decades to come.

With the successful separation of our consumer health business, we entered a new era – one exclusively focused on tackling the world's toughest health challenges through scientific innovation and technology.

We remain the world's largest, most diversified healthcare products company, and Johnson & Johnson is now moving forward as a more focused and agile organization, with a stronger growth and margin profile.

Operating as a company focused on delivering innovative medicines and medical technologies has strengthened our position as an innovation powerhouse. Today, we are innovating for patients across a spectrum of healthcare solutions in ways no other company can, and our impact is significant.

Performance and priorities

In 2023, we delivered strong and sustained performance with 9.0% operational sales growth*, excluding the COVID-19 vaccine. Adjusted net earnings were $25.4 billion*. Adjusted diluted net earnings per share was $9.92*, an increase of 11.1% from 2022.

We maintained a healthy balance sheet and robust credit rating, underscoring the stability of our financial position, and executed against all our capital allocation priorities. We remain a top investor in innovation, funding $15.1 billion in R&D, or almost 18% of 2023 sales – an all-time high for the company.

We committed over $3 billion to external growth opportunities in the last 12 months, including the acquisitions of Ambrx and Laminar, and more than 50 smaller, early-stage licensing deals and partnerships. We increased our dividend for the 61st consecutive year and completed the share repurchase program initiated in 2022, returning a total of over $14 billion to shareholders.

Innovative Medicine

We are leading where medicine is going, and for the 12th consecutive year we reported above-market growth for our Innovative Medicine business. This strong performance was fueled by growth in key brands such as DARZALEX, ERLEADA, STELARA and TREMFYA, and the acceleration of recently launched products, including CARVYKTI, SPRAVATO, TALVEY and TECVAYLI.

We made significant advances in our pipeline, with FDA approvals for AKEEGA and TALVEY, and positive Phase III data readouts for 11 in-line and pipeline medicines. We initiated Phase III clinical development programs for milvexian and our targeted oral peptide, JNJ-2113, and received FDA Breakthrough Therapy Designation for TAR-200 for the treatment of bladder cancer. Milvexian also received FDA Fast Track designations in atrial fibrillation, stroke, and acute coronary syndrome.

With 19 U.S. and EU filings across Innovative Medicine in 2023, we have high expectations for the year ahead.

MedTech

Innovating at the intersection of biology and technology, our MedTech businesses delivered over $30 billion in sales, with sales growth across Orthopaedics, Surgery, Interventional Solutions, and Vision.

We progressed 20+ MedTech pipeline programs that each have an expected net present value of greater than $100 million, and launched 15 major products. To increase access for patients and deliver clinical differentiation, we produced more than 200 scientific publications.

We built on our commitment to interventional cardiology with our successful integration of Abiomed and our acquisition of Laminar, a company focused on eliminating the left atrial appendage to prevent stroke in AFib patients.

Profoundly impacting health for humanity

Science and technology will advance human health more in the next decade than in the last century. It will lead to more effective and personalized treatments, earlier intervention, and smarter, less invasive healthcare. One example is in lung cancer, where doctors can use our robotic bronchoscopy to make a diagnosis, perform surgery with our smart instruments, and treat with our bispecific antibody. In so many ways, we are just getting started.

We are energized by our future and our evolution at Johnson & Johnson, and we remain grounded in our purpose and guiding principles. For more than 80 years, Our Credo has reminded us of our responsibilities to the people we serve: patients, doctors and nurses, employees, communities, and investors.

Our Credo values are as strong as ever. I see them in action every day working with my colleagues—a team of over 130,000 incredible individuals that includes more than 26,000 employees working in R&D, innovation, and engineering, and approximately 6,000 data scientists and digital experts embedded across our businesses globally.

The people of Johnson & Johnson are my greatest source of inspiration and the foundation of my confidence in the future of our business. Fueled by our shared belief that health is everything, and our commitment to investing in transformative science and breakthrough technology, Johnson & Johnson is poised to lead the next wave of innovation. I look forward to seeing what we accomplish together in 2024 and beyond.

Sincerely,

Joaquin Duato

Item

Cautionary note regarding forward-looking statements

This Annual Report on Form 10-K and Johnson & Johnson's other publicly available documents contain "forward-looking statements" within the meaning of the safe harbor provisions of the United States Private Securities Litigation Reform Act of 1995. Management and representatives of Johnson & Johnson and its subsidiaries (the Company) also may from time to time make forward-looking statements. Forward-looking statements do not relate strictly to historical or current facts and reflect management's assumptions, views, plans, objectives and projections about the future. Forward-looking statements may be identified by the use of words such as "plans," "expects," "will," "anticipates," "estimates" and other words of similar meaning in conjunction with, among other things: discussions of future operations; expected operating results and financial performance; impact of planned acquisitions and dispositions; impact and timing of restructuring initiatives, including associated cost savings and other benefits; the Company's strategy for growth; product development activities; regulatory approvals; market position and expenditures.

Because forward-looking statements are based on current beliefs, expectations and assumptions regarding future events, they are subject to uncertainties, risks and changes that are difficult to predict and many of which are outside of the Company's control. Investors should realize that if underlying assumptions prove inaccurate, or known or unknown risks or uncertainties materialize, the Company's actual results and financial condition could vary materially from expectations and projections expressed or implied in its forward-looking statements. Investors are therefore cautioned not to rely on these forward-looking statements. Risks and uncertainties include, but are not limited to:

Risks related to product development, market success and competition

- Challenges and uncertainties inherent in innovation and development of new and improved products and technologies on which the Company's continued growth and success depend, including uncertainty of clinical outcomes, additional analysis of existing clinical data, obtaining regulatory approvals, health plan coverage and customer access, and initial and continued commercial success;
- Challenges to the Company's ability to obtain and protect adequate patent and other intellectual property rights for new and existing products and technologies in the United States and other important markets;
- The impact of patent expirations, typically followed by the introduction of competing generic, biosimilar or other products and resulting revenue and market share losses;
- Increasingly aggressive and frequent challenges to the Company's patents by competitors and others seeking to launch competing generic, biosimilar or other products and increased receptivity of courts, the United States Patent and Trademark Office and other decision makers to such challenges, potentially resulting in loss of market exclusivity and rapid decline in sales for the relevant product sooner than expected;
- Competition in research and development of new and improved products, processes and technologies, which can result in product and process obsolescence;
- Competition to reach agreement with third parties for collaboration, licensing, development and marketing agreements for products and technologies;
- Competition based on cost-effectiveness, product performance, technological advances and patents attained by competitors; and
- Allegations that the Company's products infringe the patents and other intellectual property rights of third parties, which could adversely affect the Company's ability to sell the products in question and require the payment of money damages and future royalties.

Risks related to product liability, litigation and regulatory activity

- Product efficacy or safety concerns, whether or not based on scientific evidence, potentially resulting in product withdrawals, recalls, regulatory action on the part of the United States Food and Drug Administration (U.S. FDA) (or international counterparts), declining sales, reputational damage, increased litigation expense and share price impact;
- The impact, including declining sales and reputational damage, of significant litigation or government action adverse to the Company, including product liability claims and allegations related to pharmaceutical marketing practices and contracting strategies;
- The impact of an adverse judgment or settlement and the adequacy of reserves related to legal proceedings, including patent litigation, product liability, personal injury claims, securities class actions, government investigations, employment and other legal proceedings;

- Increased scrutiny of the healthcare industry by government agencies and state attorneys general resulting in investigations and prosecutions, which carry the risk of significant civil and criminal penalties, including, but not limited to, debarment from government business;
- Failure to meet compliance obligations in compliance agreements with governments or government agencies, which could result in significant sanctions;
- Potential changes to applicable laws and regulations affecting United States and international operations, including relating to: approval of new products; licensing and patent rights; sales and promotion of healthcare products; access to, and reimbursement and pricing for, healthcare products and services; environmental protection; and sourcing of raw materials;
- Compliance with local regulations and laws that may restrict the Company's ability to manufacture or sell its products in relevant markets, including requirements to comply with medical device reporting regulations and other requirements such as the European Union's Medical Devices Regulation;
- Changes in domestic and international tax laws and regulations, increasing audit scrutiny by tax authorities around the world and exposures to additional tax liabilities potentially in excess of existing reserves; and
- The issuance of new or revised accounting standards by the Financial Accounting Standards Board and regulations by the Securities and Exchange Commission.

Risks related to the Company's strategic initiatives, healthcare market trends and the realization of benefits from the separation of the Company's Consumer Health Business

- Pricing pressures resulting from trends toward healthcare cost containment, including the continued consolidation among healthcare providers and other market participants, trends toward managed care, the shift toward governments increasingly becoming the primary payors of healthcare expenses, significant new entrants to the healthcare markets seeking to reduce costs and government pressure on companies to voluntarily reduce costs and price increases;
- Restricted spending patterns of individual, institutional and governmental purchasers of healthcare products and services due to economic hardship and budgetary constraints;
- Challenges to the Company's ability to realize its strategy for growth including through externally sourced innovations, such as development collaborations, strategic acquisitions, licensing and marketing agreements, and the potential heightened costs of any such external arrangements due to competitive pressures;
- The potential that the expected strategic benefits and opportunities from any planned or completed acquisition or divestiture by the Company may not be realized or may take longer to realize than expected;
- The potential that the expected benefits and opportunities related to past and ongoing restructuring actions may not be realized or may take longer to realize than expected;
- The Company's ability to divest the Company's remaining ownership interest in Kenvue Inc. (Kenvue) and realize the anticipated benefits from the separation; and
- Kenvue's ability to succeed as a standalone publicly traded company.

Risks related to economic conditions, financial markets and operating internationally

- The risks associated with global operations on the Company and its customers and suppliers, including foreign governments in countries in which the Company operates;
- The impact of inflation and fluctuations in interest rates and currency exchange rates and the potential effect of such fluctuations on revenues, expenses and resulting margins;
- Potential changes in export/import and trade laws, regulations and policies of the United States and other countries, including any increased trade restrictions or tariffs and potential drug reimportation legislation;
- The impact on international operations from financial instability in international economies, sovereign risk, possible imposition of governmental controls and restrictive economic policies, and unstable international governments and legal systems;
- The impact of global public health crises and pandemics;

- Changes to global climate, extreme weather and natural disasters that could affect demand for the Company's products and services, cause disruptions in manufacturing and distribution networks, alter the availability of goods and services within the supply chain, and affect the overall design and integrity of the Company's products and operations;
- The impact of global or economic changes or events, including global tensions and war; and
- The impact of armed conflicts and terrorist attacks in the United States and other parts of the world, including social and economic disruptions and instability of financial and other markets.

Risks related to supply chain and operations

- Difficulties and delays in manufacturing, internally, through third-party providers or otherwise within the supply chain, that may lead to voluntary or involuntary business interruptions or shutdowns, product shortages, withdrawals or suspensions of products from the market, and potential regulatory action;
- Interruptions and breaches of the Company's information technology systems or those of the Company's vendors, which could result in reputational, competitive, operational or other business harm as well as financial costs and regulatory action;
- Reliance on global supply chains and production and distribution processes that are complex and subject to increasing regulatory requirements that may adversely affect supply, sourcing and pricing of materials used in the Company's products; and
- The potential that the expected benefits and opportunities related to restructuring actions may not be realized or may take longer to realize than expected, including due to any required approvals from applicable regulatory authorities.

Investors also should carefully read the risk factors described in Item 1A of this Annual Report on Form 10-K for a description of certain risks that could, among other things, cause the Company's actual results to differ materially from those expressed in its forward-looking statements. Investors should understand that it is not possible to predict or identify all such factors and should not consider the risks described above and in Item 1A to be a complete statement of all potential risks and uncertainties. The Company does not undertake to publicly update any forward-looking statement that may be made from time to time, whether as a result of new information or future events or developments.

Part I

Item 1. Business

General

Johnson & Johnson and its subsidiaries (the Company) have approximately 131,900 employees worldwide engaged in the research and development, manufacture and sale of a broad range of products in the healthcare field. Johnson & Johnson is a holding company, with operating companies conducting business in virtually all countries of the world. The Company's primary focus is products related to human health and well-being. Johnson & Johnson was incorporated in the State of New Jersey in 1887.

The Executive Committee of Johnson & Johnson is the principal management group responsible for the strategic operations and allocation of the resources of the Company. This Committee oversees and coordinates the activities of the Company's two business segments: Innovative Medicine (previously referred to as Pharmaceutical) and MedTech. Within the strategic parameters provided by the Committee, senior management groups at U.S. and international operating companies are each responsible for their own strategic plans and the day-to-day operations of those companies. Each subsidiary within the business segments is, with limited exceptions, managed by residents of the country where located.

Segments of business

Following the completion of the separation of the Consumer Health business (Kenvue) in August 2023, the Company is now organized into two business segments: Innovative Medicine and MedTech. Additional information required by this item is incorporated herein by reference to the narrative and tabular descriptions of segments and operating results under: Item 7. Management's discussion and analysis of results of operations and financial condition of this Report; and Note 17 Segments of business and geographic areas of the notes to consolidated financial statements included in Item 8 of this Report.

Innovative Medicine

The Innovative Medicine segment is focused on the following therapeutic areas: Immunology (e.g., rheumatoid arthritis, psoriatic arthritis, inflammatory bowel disease and psoriasis), Infectious Diseases (e.g., HIV/AIDS), Neuroscience (e.g., mood disorders, neurodegenerative disorders and schizophrenia), Oncology (e.g., prostate cancer, hematologic malignancies, lung cancer and bladder cancer), Cardiovascular and Metabolism (e.g., thrombosis, diabetes and macular degeneration) and Pulmonary Hypertension (e.g., Pulmonary Arterial Hypertension). Medicines in this segment are distributed directly to retailers, wholesalers, distributors, hospitals and healthcare professionals for prescription use. Key products in the Innovative Medicine segment include: REMICADE (infliximab), a treatment for a number of immune-mediated inflammatory diseases; SIMPONI (golimumab), a subcutaneous treatment for adults with moderate to severe rheumatoid arthritis, active psoriatic arthritis, active ankylosing spondylitis and moderately active to severely active ulcerative colitis; SIMPONI ARIA (golimumab), an intravenous treatment for adults with moderate to severe rheumatoid arthritis, active psoriatic arthritis and active ankylosing spondylitis and active polyarticular juvenile idiopathic arthritis (pJIA) in people 2 years of age and older; STELARA (ustekinumab), a treatment for adults and children with moderate to severe plaque psoriasis, for adults with active psoriatic arthritis, for adults with moderately to severely active Crohn's disease and treatment of moderately to severely active ulcerative colitis; TREMFYA (guselkumab), a treatment for adults with moderate to severe plaque psoriasis and active psoriatic arthritis; EDURANT (rilpivirine), PREZISTA (darunavir) and PREZCOBIX/REZOLSTA (darunavir/cobicistat), antiretroviral medicines for the treatment of human immunodeficiency virus (HIV) in combination with other antiretroviral products and SYMTUZA (darunavir/cobicistat/emtricitabine/tenofovir alafenamide), a once-daily single tablet regimen for the treatment of HIV; CONCERTA (methylphenidate HCl) extended-release tablets CII, a treatment for attention deficit hyperactivity disorder; INVEGA SUSTENNA/XEPLION (paliperidone palmitate), for the treatment of schizophrenia and schizoaffective disorder in adults; INVEGA TRINZA/TREVICTA (paliperidone palmitate), for the treatment of schizophrenia in patients after they have been adequately treated with INVEGA SUSTENNA for at least four months; SPRAVATO (Esketamine), a nasal spray, used along with an oral antidepressant, to treat adults with treatment-resistant depression (TRD) and depressive symptoms in adults with major depressive disorder (MDD) with suicidal thoughts or actions; CARVYKTI (ciltacabtagene autoleucel), a chimeric antigen receptor (CAR)-T-cell therapy for the treatment of patients with relapsed/refractory multiple myeloma; ZYTIGA (abiraterone

acetate), a treatment for patients with prostate cancer; ERLEADA (apalutamide), a next-generation androgen receptor inhibitor for the treatment of patients with prostate cancer; IMBRUVICA (ibrutinib), a treatment for certain B-cell malignancies, or blood cancers and chronic graft versus host disease; DARZALEX (daratumumab), a treatment for multiple myeloma; DARZALEX FASPRO (daratumumab and hyaluronidase-fihj), a treatment for multiple myeloma and light chain (AL) Amyloidosis; XARELTO (rivaroxaban), an oral anticoagulant for the prevention of deep vein thrombosis (DVT), which may lead to pulmonary embolism (PE) in patients undergoing hip or knee replacement surgery, to reduce the risk of stroke and systemic embolism in patients with nonvalvular atrial fibrillation, and for the treatment and reduction of risk of recurrence of DVT and PE to reduce the risk of major cardiovascular events in patients with coronary artery disease (CAD) and peripheral artery disease (PAD), for the treatment and secondary prevention of thromboembolism in pediatric patients, and for thromboprophylaxis in pediatric patients following the Fontan procedure; OPSUMIT (macitentan) as monotherapy or in combination, indicated for the long-term treatment of pulmonary arterial hypertension (PAH); UPTRAVI (selexipag), the only approved oral and intravenous, selective IP receptor agonist targeting a prostacyclin pathway in PAH. Many of these medicines were developed in collaboration with strategic partners or are licensed from other companies and maintain active lifecycle development programs.

MedTech

The MedTech segment includes a broad portfolio of products used in the Interventional Solutions, Orthopaedics, Surgery and Vision categories. Interventional Solutions include electrophysiology products (Biosense Webster) to treat heart rhythm disorders, the heart recovery portfolio (Abiomed) which includes technologies to treat severe coronary artery disease requiring high-risk PCI or AMI cardiogenic shock, and Neurovascular care (Cerenovus) that treats hemorrhagic and ischemic stroke. The Orthopaedics portfolio (DePuy Synthes) includes products and enabling technologies that support Hips, Knees, Trauma, and Spine, Sports & Other. The Surgery portfolios include advanced and general surgery technologies (Ethicon), as well as solutions that focus on breast aesthetics (Mentor), and Ear, Nose and Throat (Acclarent) procedures. Johnson & Johnson Vision products include ACUVUE Brand contact lenses and TECNIS intraocular lenses for cataract surgery. These products are distributed to wholesalers, hospitals and retailers, and used predominantly in the professional fields by physicians, nurses, hospitals, eye care professionals and clinics.

Geographic areas

Johnson & Johnson and its subsidiaries (the Company) have approximately 131,900 employees worldwide engaged in the research and development, manufacture and sale of a broad range of products in the healthcare field. The Company conducts business in virtually all countries of the world with the primary focus on products related to human health and well-being.

The products made and sold in the international business include many of those described above under Segments of Business – Innovative Medicine and MedTech. However, the principal markets, products and methods of distribution in the international business vary with the country and the culture. The products sold in international business include those developed in the U.S. and by subsidiaries abroad.

Investments and activities in some countries outside the U.S. are subject to higher risks than comparable U.S. activities because the investment and commercial climate may be influenced by financial instability in international economies, restrictive economic policies and political and legal system uncertainties.

Raw materials

Raw materials essential to the Company's business are generally readily available from multiple sources. Where there are exceptions, the temporary unavailability of those raw materials would not likely have a material adverse effect on the financial results of the Company.

Patents

The Company's subsidiaries have made a practice of obtaining patent protection on their products and processes where possible. They own, or are licensed under, a significant number of patents in the U.S. and other countries relating to their products, product uses, formulations and manufacturing processes, which in the aggregate are believed to be of material importance to the Company in the operation of its businesses. The Company’s subsidiaries face patent challenges from third parties, including challenges seeking to manufacture and market generic and biosimilar versions of the Company's key

pharmaceutical products prior to expiration of the applicable patents covering those products. Significant legal proceedings and claims involving the Company's patent and other intellectual property are described in Note 19 Legal proceedings—Intellectual property of the Notes to Consolidated Financial Statements included in Item 8 of this Report.

Sales of the Company's largest product, STELARA (ustekinumab) accounted for approximately 12.8% of the Company's total revenues for fiscal 2023. Accordingly, the patents related to this product are believed to be material to the Company. Janssen Biotech, Inc., a wholly-owned subsidiary of Johnson & Johnson, owns patents specifically related to STELARA. The latest expiring United States composition of matter patent expired in 2023. As a result of settlements and other agreements with third parties, the Company does not anticipate the launch of a biosimilar version of STELARA before January 1, 2025 in the United States. The latest expiring European composition of matter patent (Supplementary Protection Certificate) expires in 2024.

Sales of the Company's second largest product, collectively DARZALEX (daratumumab) and DARZALEX FASPRO (daratumumab and hyaluronidase-fihj), accounted for approximately 11.4% of the Company's total revenues for fiscal 2023. Accordingly, the patents related to this product are believed to be material to the Company. Genmab A/S owns two patent families related to DARZALEX, and Janssen Biotech, Inc. has an exclusive license to those patent families. The two patent families both expire in the United States in 2029, and in Europe, compound patent protection in select countries extends to 2031/2032. Janssen Biotech, Inc. owns a separate patent portfolio related to DARZALEX FASPRO.

Trademarks

The Company's subsidiaries have made a practice of selling their products under trademarks and of obtaining protection for these trademarks by all available means. These trademarks are protected by registration in the U.S. and other countries where such products are marketed. The Company considers these trademarks in the aggregate to be of material importance in the operation of its businesses.

Seasonality

Worldwide sales do not reflect any significant degree of seasonality; however, spending has typically been heavier in the fourth quarter of each year than in other quarters. This reflects increased spending decisions, principally for research and development activity.

Competition

In all of their product lines, the Company's subsidiaries compete with companies both locally and globally. Competition exists in all product lines without regard to the number and size of the competing companies involved. Competition in research, both internally and externally sourced, involving the development and the improvement of new and existing products and processes, is particularly significant. The development of new and innovative products, as well as protecting the underlying intellectual property of the Company's product portfolio, is important to the Company's success in all areas of its business. The competitive environment requires substantial investments in continuing research.

Environment

The Company is subject to a variety of environmental laws and regulations in the United States and other jurisdictions. The Company believes that its operations comply in all material respects with applicable environmental laws and regulations. The Company's compliance with these requirements is not expected to have a material effect upon its capital expenditures, cash flows, earnings or competitive position.

Regulation

The Company's businesses are subject to varying degrees of governmental regulation in the countries in which operations are conducted, and the general trend is toward increasingly stringent regulation and enforcement. The Company is subject to costly and complex U.S. and foreign laws and governmental regulations and any adverse regulatory action may materially adversely affect the Company's financial condition and business operations. In the U.S., the pharmaceutical product and medical technology industries have long been subject to regulation by various federal and state agencies, primarily as to product safety, efficacy, manufacturing, advertising, labeling and safety reporting. The exercise of broad regulatory powers by the U.S. Food and Drug Administration (the U.S. FDA) continues to result in increases in the amounts of testing and documentation required for U.S. FDA approval of new drugs and devices and a corresponding increase in the expense of product introduction. Similar trends are also evident in major markets outside of the U.S.

The new medical device regulatory framework and the evolving privacy, data localization, and emerging cyber security laws and regulations around the world are examples of such increased regulation. Within the U.S., an increasing number of U.S. States have enacted comprehensive privacy laws and federal regulators (e.g., the U.S. FDA, FTC and HHS) continue to stress the intersection of health and privacy as a compliance and enforcement priority. In the EU, multiple directives and laws (including NIS2, EHDS, the Data Act, the Cyber Resilience Act, and the AI Act) are rapidly changing privacy and cybersecurity compliance requirements while introducing new enforcement risks. In addition, China has introduced broad personal information protection and data security regulations, with more anticipated, thereby increasing China's scrutiny of company compliance and data transfer practices. With other jurisdictions enacting similar privacy laws, local data protection authorities will force greater accountability on the collection, access and use of personal data in the healthcare industry. These laws can also restrict transfers of data across borders, potentially impacting how data-driven health care solutions are developed and deployed globally in a compliant manner. Moreover, as a result of the broad scale release and availability of Artificial Intelligence (AI) technologies such as generative AI, a global trend towards more comprehensive and nuanced regulation (e.g., White House's Executive Order on the Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence; the EU AI Act) to ensure the ethical use, privacy, and security of AI is underway that includes standards for transparency, accountability, and fairness, which will require compliance developments or enhancements.

The regulatory agencies under whose purview the Company operates have administrative powers that may subject it to actions such as product withdrawals, recalls, seizure of products and other civil and criminal sanctions. In some cases, the Company's subsidiaries may deem it advisable to initiate product recalls regardless of whether it has been required or directed to.

The U.S. FDA and regulatory agencies around the globe are also increasing their enforcement activities. If the U.S. FDA were to conclude that we are not in compliance with applicable laws or regulations, or that any of our pharmaceutical products or medical technologies are ineffective or pose an unreasonable health risk, the U.S. FDA could ban such products, detain or seize adulterated or misbranded products, order a recall, repair, replacement, or refund of such products, refuse to grant pending applications for marketing authorization or require certificates of foreign governments for exports, and/or require us to notify health professionals and others that the products present unreasonable risks of substantial harm to the public health. The U.S. FDA may also assess civil or criminal penalties against us, our officers or employees and impose operating restrictions on a company-wide basis, or enjoin and/or restrain certain conduct resulting in violations of applicable law. The U.S. FDA may also recommend prosecution to the U.S. Department of Justice. Any adverse regulatory action, depending on its magnitude, may restrict us from effectively marketing and selling our products and limit our ability to obtain future clearances or approvals, and could result in a substantial modification to our business practices and operations. Equivalent enforcement mechanisms exist in different countries in which we conduct business.

The costs of human healthcare have been and continue to be a subject of study, investigation and regulation by governmental agencies and legislative bodies around the world. In the U.S., attention has been focused by states, regulatory agencies and Congress on prices, profits, overutilization and the quality and costs of healthcare generally. Laws and regulations have been enacted to require adherence to strict compliance standards and prevent fraud and abuse in the healthcare industry. There is increased focus on interactions and financial relationships between healthcare companies and healthcare providers. Various state and federal transparency laws and regulations require disclosures of payments and other transfers of value made to certain healthcare practitioners, including physicians, teaching hospitals, and certain non-physician practitioners. Federal and foreign laws governing international business practices require strict compliance with anti-bribery standards and certain prohibitions with respect to payments to any foreign government official. Payors and Pharmacy Benefit Managers (PBMs) are a potent force in the marketplace, and increased attention is being paid to the impact of PBM practices on healthcare cost and access in the U.S.

Our business has been and continues to be affected by federal and state legislation that alters the pricing, coverage, and reimbursement landscape. At the federal level, in August 2022, President Biden signed into law the Inflation Reduction Act

(IRA), which includes provisions that effectively authorize the government to establish prices for certain high-spend single-source drugs and biologics reimbursed by the Medicare program, starting in 2026 for Medicare Part D drugs and 2028 for Medicare Part B drugs. On August 29, 2023, the Centers for Medicare & Medicaid Services ("CMS") published the first "Selected Drug" list, which includes XARELTO and STELARA as well as IMBRUVICA, which is developed in collaboration and co-commercialized in the U.S. with Pharmacyclics LLC, an AbbVie company. The Selected Drug list also included other medicines targeting disease states that are prevalent in the Medicare population. There remains uncertainty, however, regarding how the federal government will establish prices for the selected products, as the IRA specifies a ceiling price but not a minimum price. In any event, we anticipate that the selected products will be subjected to a government-established price for the Medicare population.

The IRA also contains provisions that impose rebates if certain prices increase at a rate that outpaces the rate of inflation, beginning October 1, 2022, for Medicare Part D drugs and January 1, 2023, for Medicare Part B drugs. Separate IRA provisions redesign the Medicare Part D benefit in various ways, including by shifting a greater portion of costs to manufacturers within certain coverage phases and replacing the Part D coverage gap discount program with a new manufacturer discounting program. Failure to comply with IRA provisions may subject manufacturers to various penalties, including civil monetary penalties.

In July 2023, Janssen Pharmaceuticals, Inc. (Janssen) filed litigation against the U.S. Department of Health and Human Services as well as the Centers for Medicare and Medicaid Services challenging the constitutionality of the Inflation Reduction Act's (IRA) Medicare Drug Price Negotiation Program. The litigation requests a declaration that the IRA violates Janssen's rights under the First Amendment and the Fifth Amendment to the Constitution and therefore that Janssen is not subject to the IRA's mandatory pricing scheme. The impact of the IRA on our business and the broader pharmaceutical industry remains uncertain, as litigation filed by Janssen and other pharmaceutical companies remains ongoing and CMS has yet to publicly announce the maximum fair price for each of the selected drugs.

Additionally, we expect continued scrutiny on drug pricing and government price reporting from Congress, agencies, and other bodies at the federal and state levels, which may result in additional regulations or other mechanisms to increase pricing transparency and controls.

There are a number of additional bills pending in Congress and healthcare reform proposals at the state level that would affect drug pricing, including in the Medicare and Medicaid programs. This changing legal landscape has both positive and negative impacts on the U.S. healthcare industry with much remaining uncertain as to how various provisions of federal and state law, and potential modification or repeal of these laws, will ultimately affect the industry. The IRA and any other federal or state legislative change could affect the pricing and market conditions for our products.

In addition, business practices in the healthcare industry have come under increased scrutiny, particularly in the U.S., by government agencies and state attorneys general, and resulting investigations and prosecutions carry the risk of significant civil and criminal penalties. Of note is the increased enforcement activity by data protection authorities in various jurisdictions, particularly in the European Union, where significant fines have been levied on companies for data breaches, violations of privacy requirements, and unlawful cross-border data transfers. In the U.S., the Federal Trade Commission has stepped up enforcement of data privacy with several significant settlements (including settlements concerning the downstream sharing of personal information and use and disclosure of personal health data) and there have been a material increase in class-action lawsuits linked to the collection and use of biometric data and use of tracking technologies.

Further, the Company relies on global supply chains, and production and distribution processes, that are complex, and subject to increasing regulatory requirements that may affect sourcing, supply and pricing of materials used in the Company's products. These processes also are subject to complex and lengthy regulatory approvals.

Employees and human capital management

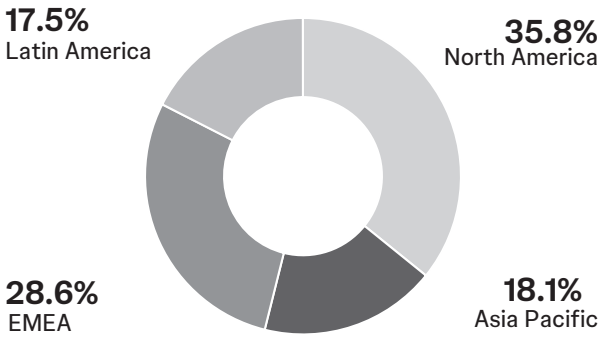
As of December 31, 2023, the number of employees was approximately:

	2023
Employees[1]	134,400
Full-time equivalent (FTE) positions[2]	131,900

1 "Employee" is defined as an individual working full-time or part-time, excluding fixed term employees, interns and co-op employees. Employee data may not include full population from more recently acquired companies and individuals on long-term disability are excluded. Contingent workers, contractors and subcontractors are also excluded.

2 FTE represents the total number of full-time equivalent positions and does not reflect the total number of individual employees as some work part-time.

Employees by region (in percentages)



Strategy

The Company believes that its employees are critical to its continued success and are an essential element of its long-term strategy. Management is responsible for ensuring that its policies and processes reflect and reinforce the Company's desired corporate culture, including policies and processes related to strategy, risk management, and ethics and compliance. The Company's human capital management strategy is built on three fundamental focus areas:

- Attracting and recruiting the best talent
- Developing and retaining talent
- Empowering and inspiring talent

Underpinning these focus areas are ongoing efforts to cultivate and foster a culture built on diversity, equity and inclusion (DEI), innovation, health, well-being and safety, where the Company's employees are encouraged to succeed both professionally and personally while helping the Company achieve its business goals.

Culture and employee engagement

At the Company, employees are guided by Our Credo which sets forth the Company's responsibilities to patients, consumers, customers, healthcare professionals, employees, communities and shareholders. Employees worldwide must adhere to the Company's Code of Business Conduct which sets basic requirements and serves as a foundation for the Company policies, procedures and guidelines, all of which provide additional guidance on expected employee behaviors in every market where it operates. The Company conducts global surveys that offer its employees the ability to provide feedback and valuable insight to help address potential human resources risks and identify opportunities to improve. In 2023, 94% of global employees across 76 countries participated in Our Credo Survey which was offered in 36 languages.

Growth and development

To lead in the changing healthcare landscape, it is crucial that the Company continue to attract and retain top talent. In 2023, the Company's voluntary turnover rate was 7%. The Company believes that its employees must be equipped with the right knowledge and skills and be provided with opportunities to grow and develop in their careers. Accordingly, professional development programs and educational resources are available to all employees. The Company's objective is to foster a learning culture that helps shape each person's unique career path while creating a robust pipeline of talent to deliver on the Company's long-term strategies. In furtherance of this objective, the Company deploys a global approach to ensure development is for everyone, regardless of where they are on their career journey. To prioritize learning, the Company recently held Johnson & Johnson's first Global Learning Day. Employees were encouraged to set aside a full day to explore skill-building courses across five areas: leadership, business skills, digital upskilling, DEI, and well-being, on J&J Learn, the Company's new learning platform.

Diversity, equity, and inclusion (DEI)

The Company is committed to workplace diversity and to cultivating, fostering, and advancing a culture of equity and inclusion. The Company's evidenced-based global enterprise Diversity, Equity and Inclusion strategy recognizes how DEI accelerates the Company's ability to meet the changing needs of the communities the Company serves in, as outlined in Our Credo. The Company's DEI Vision is: *Be yourself, change the world*. The Company's DEI Mission is: *Make diversity, equity and inclusion how we work everyday*. The Company's enterprise DEI Strategy is aligned to the DEI Vision and Mission and rests on four core pillars:

- Build a workforce of individuals with diverse backgrounds, cultures, abilities and perspectives
- Foster a culture of inclusion where every individual belongs
- Transform talent and business processes to achieve equitable opportunities for all
- Drive innovation and growth with our business to serve diverse markets around the world

The Company's DEI strategy is guided by internal and external insights, global best practices and continual employee feedback and recognizes that while diversity changes by location, inclusion is the same everywhere.

Compensation and benefits

As part of the Company's total rewards philosophy, the Company offers competitive compensation and benefits to attract and retain top talent. The Company is committed to fairness and equitable treatment in its compensation and benefits for employees at all levels. The Company observes legal minimum wage provisions and exceeds them where possible. The Company's total rewards offerings include an array of programs to support its employees' well-being, including annual performance incentive opportunities, pension and retirement savings programs, health and welfare benefits, paid time off, leave programs, flexible work schedules and employee assistance programs. In recognition of the Company's commitment to help employees balance their personal and professional responsibilities, the Company enhanced its caregiver, bereavement, and volunteer paid leave benefits, effective July 2023.

Health, wellness and safety

The Company's investment in employee health, well-being and safety is built on its conviction that advancing health for humanity starts with advancing the health of its employees. With the right awareness, focus, practices and tools, the Company ensures that all its employees around the world, as well as temporary contractors and visitors to the Company's sites, can work safely. The Company has continuously expanded health and well-being programs throughout the Company and across the globe, incorporating new thinking and technologies to keep its offerings best-in-class and to help employees achieve their personal health goals. The programs and practices the Company advances for total health—physical, mental, emotional and financial—ensure employee health protection for emerging health risks. The Company continues to address our employees needs through J&J Flex, a hybrid model that empowers the Company's office-based employees to find the right productivity and balance of in-person and remote work.

Available information

The Company's main corporate website address is www.jnj.com. The Company makes its SEC filings available on the Company's website at www.investor.jnj.com/financials/sec-filings, as soon as reasonably practicable after having been electronically filed or furnished to the SEC. The Company's SEC filings are also available at the SEC's website at www.sec.gov.

Investors and the public should note that the Company also announces information at www.factsaboutourprescriptionopioids.com, www.factsabouttalc.com and www.LLTManagementInformation.com. We use these websites to communicate with investors and the public about our products, litigation and other matters. It is possible that the information we post to these websites could be deemed to be material information. Therefore, we encourage investors and others interested in the Company to review the information posted to these websites in conjunction with www.jnj.com, the Company's SEC filings, press releases, public conference calls and webcasts.

In addition, the Amended and Restated Certificate of Incorporation, By-Laws, the written charters of the Audit Committee, the Compensation & Benefits Committee, the Nominating & Corporate Governance Committee, the Regulatory Compliance & Sustainability Committee, the Science & Technology Committee and any special committee of the Board of Directors and the Company's Principles of Corporate Governance, Code of Business Conduct (for employees), Code of Business Conduct & Ethics for Members of the Board of Directors and Executive Officers, and other corporate governance materials, are available at www.investor.jnj.com/governance/corporate-governance-overview on the Company's website and will be provided without charge to any shareholder submitting a written request, as provided above. The information on www.jnj.com, www.factsaboutourprescriptionopioids.com, www.factsabouttalc.com and www.LLTManagementInformation.com is not, and will not be deemed, a part of this Report or incorporated into any other filings the Company makes with the SEC.

Item 1A. Risk factors

An investment in the Company's common stock or debt securities involves risks and uncertainties. The Company seeks to identify, manage and mitigate risks to our business, but uncertainties and risks are difficult to predict and many are outside of the Company's control and cannot therefore be eliminated. In addition to the other information in this report and the Company's other filings with the SEC, investors should consider carefully the factors set forth below. Investors should be aware that it is not possible to predict or identify all such factors and that the following is not meant to be a complete discussion of all potential risks or uncertainties. If known or unknown risks or uncertainties materialize, the Company's business, results of operations or financial condition could be adversely affected, potentially in a material way.

Risks related to our business, industry and operations

The Company's businesses operate in highly competitive product markets and competitive pressures could adversely affect the Company's earnings.

The Company faces substantial competition in its two operating segments and in all geographic markets. The Company's businesses compete with companies of all sizes on the basis of cost-effectiveness, technological innovations, intellectual property rights, product performance, real or perceived product advantages, pricing and availability and rate of reimbursement. The Company also competes with other market participants in securing rights to acquisitions, collaborations and licensing agreements with third parties. Competition for rights to product candidates and technologies may result in significant investment and acquisition costs and onerous agreement terms for the Company. Competitors' development of more effective or less costly products, and/or their ability to secure patent and other intellectual property rights and successfully market products ahead of the Company, could negatively impact sales of the Company's existing products as well as its ability to bring new products to market despite significant prior investment in the related product development. The Company may also experience operational and financial risk in connection with acquisitions if we are unable to fully identify potential risks and liabilities associated with acquired businesses or products, successfully integrate operations and employees, and successfully identify and realize synergies with existing businesses while containing acquisition-related strain on our management, operations and financial resources.

For the Company's Innovative Medicine businesses, loss of patent exclusivity for a product often is followed by a substantial reduction in sales as competitors gain regulatory approval for generic and other competing products and enter the market. Similar competition can be triggered by the loss of exclusivity for a biological product. For the Company's MedTech businesses, technological innovation, product quality, reputation and customer service are especially important to competitiveness. Development by other companies of new or improved products, processes and technologies could threaten to make the Company's products or technologies less desirable, less economical or obsolete. The Company's business and operations will be negatively impacted if we are unable to introduce new products or technological advances that are safe, more effective, more effectively marketed or otherwise outperform those of our competitors.

Interruptions and delays in manufacturing operations could adversely affect the Company's business, sales and reputation.

The Company's manufacturing of products requires the timely delivery of sufficient amounts of complex, high-quality components and materials. The Company's subsidiaries operate 61 manufacturing facilities as well as sourcing from thousands of suppliers around the world. The Company has in the past, and may in the future, face unanticipated interruptions and delays in manufacturing through its internal or external supply chain. Manufacturing disruptions can occur for many reasons including regulatory action, production quality deviations or safety issues, labor disputes, labor shortages, site-specific incidents (such as fires), natural disasters such as hurricanes and other severe weather events, raw material shortages, political unrest, terrorist attacks and epidemics or pandemics. Such delays and difficulties in manufacturing can result in product shortages, declines in sales and reputational impact as well as significant remediation and related costs associated with addressing the shortage.

The Company relies on third parties to manufacture and supply certain of our products. Any failure by or loss of a third-party manufacturer or supplier could result in delays and increased costs, which may adversely affect our business.

The Company relies on third parties to manufacture and supply certain of our raw materials, component parts and products. We depend on these third-party manufacturers to allocate to us a portion of their manufacturing capacity sufficient to meet our needs, to produce products of acceptable quality and at acceptable manufacturing yields and to deliver those products to us on a timely basis and at acceptable prices. However, we cannot guarantee that these third-party manufacturers will be able to meet our near-term or long-term manufacturing requirements, which could result in lost sales and have an adverse effect on our business.

Other risks associated with our reliance on third parties to manufacture these products include reliance on the third party for regulatory compliance and quality assurance, misappropriation of the Company's intellectual property, limited ability to manage our inventory, possible breach of the manufacturing agreement by the third party and the possible termination or nonrenewal of the manufacturing agreement by the third party at a time that is costly or inconvenient for us. Moreover, if any of our third-party manufacturers suffers any damage to facilities, loses benefits under material agreements, experiences power outages, encounters financial difficulties, is unable to secure necessary raw materials from its suppliers or suffers any other reduction in efficiency, the Company may experience significant business disruption. In the event of any such disruption, the Company would need to seek and source other qualified third-party manufacturers, likely resulting in further delays and increased costs which could affect our business adversely.

Counterfeit versions of our products could harm our patients and have a negative impact on our revenues, earnings, reputation and business.

Our industry continues to be challenged by the vulnerability of distribution channels to illegal counterfeiting and the presence of counterfeit products in a growing number of markets and over the Internet. Third parties may illegally distribute and sell counterfeit versions of our products, which do not meet our rigorous manufacturing and testing standards. To distributors and patients, counterfeit products may be visually indistinguishable from the authentic version. Counterfeit medicines pose a risk to patient health and safety because of the conditions under which they are manufactured – often in unregulated, unlicensed, uninspected and unsanitary sites – as well as the lack of regulation of their contents.

The industry's failure to mitigate the threat of counterfeit medicines could adversely impact our business and reputation by impacting patient confidence in our authentic products, potentially resulting in lost sales, product recalls, and an increased threat of litigation. In addition, diversion of our products from their authorized market into other channels may result in reduced revenues and negatively affect our profitability.

Global health crises, pandemics, epidemics, or other outbreaks could adversely disrupt or impact certain aspects of the Company's business, results of operations and financial condition.

We are subject to risks associated with global health crises, epidemics, pandemics and other outbreaks (such incident(s), a health crisis or health crises). For example, the COVID-19 pandemic adversely impacted certain aspects of the Company's business, results of operations and financial condition, including lower sales and reduced customer demand and usage of certain of our products. The spread of any health crises may cause the Company to modify its business practices, and take further actions as may be required by government authorities or as the Company determines are in the best interests of our patients, customers, employees and business partners under such circumstances. While the Company has robust business continuity plans in place across our global supply chain network designed to help mitigate the impact of health crises, these efforts may not completely prevent our business from being adversely affected in the event of a health crisis. Health crises could adversely impact the Company's operations, including, among other things, our manufacturing operations, supply chain, third-party suppliers, sales and marketing, and clinical trial operations. Any of these factors could adversely affect the Company's business, financial results, and global economic conditions generally.

Risks related to government regulation and legal proceedings

Global sales in the Company's Innovative Medicine and MedTech segments may be negatively impacted by healthcare reforms and increasing pricing pressures.

Sales of the Company's Innovative Medicine and MedTech products are significantly affected by reimbursements by third-party payors such as government healthcare programs, private insurance plans and managed care organizations. As part of various efforts to contain healthcare costs, these payors are putting downward pressure on prices at which products will be reimbursed. In the U.S., increased purchasing power of entities that negotiate on behalf of Medicare, Medicaid, and private sector beneficiaries, in part due to continued consolidation among healthcare providers, could result in further pricing pressures. In addition, recent legislation and ongoing political scrutiny on pricing, coverage and reimbursement could result in additional pricing pressures. Specifically, the Inflation Reduction Act of 2022 (IRA) may subject certain products to government-established pricing, potentially impose rebates, and subject manufacturers who fail to adhere to the government's interpretations of the law to penalties. Further, increased third-party utilization of the 340B Federal Drug Discount Program from expanded interpretations of the statute may have a negative impact on the Company's financial performance. Outside the U.S., numerous major markets, including the EU, United Kingdom, Japan and China, have pervasive government involvement in funding healthcare and, in that regard, directly or indirectly impose price controls, limit access to, or reimbursement for, the Company's products, or reduce the value of its intellectual property protection.

We are subject to an increasing number of costly and complex governmental regulations in the countries in which operations are conducted which may materially adversely affect the Company's financial condition and business operations.

As described in Item 1. Business, the Company is subject to an increasing number of extensive government laws and regulations, investigations and legal action by national, state and local government agencies in the U.S. and other countries in which it operates. For example, changes to the U.S. FDA's timing or requirements for approval or clearance of our products may have a negative impact on our ability to bring new products to market. New laws and regulations may also impose deadlines on the Company, or its third-party suppliers, manufacturers or other partners and providers, for which there may be insufficient time to implement changes to comply with such new regulations and may result in manufacturing delays or other supply chain constraints. If the Company is unable to identify ways to mitigate these delays or constraints, there may be an adverse effect on sales and access to our products.

The Company is subject to significant legal proceedings that can result in significant expenses, fines and reputational damage.

In the ordinary course of business, Johnson & Johnson and its subsidiaries are subject to numerous claims and lawsuits involving various issues such as product liability, patent disputes and claims that their product sales, marketing and pricing practices violate various antitrust, unfair trade practices and/or consumer protection laws. The Company's more significant legal proceedings are described in Note 19 Legal proceedings under Notes to the Consolidated Financial Statements included in Item 8 of this Report. Litigation, in general, and securities, derivative action, class action and multi-district litigation, in particular, can be expensive and disruptive. Some of these matters may include thousands of plaintiffs, may involve parties seeking large and/or indeterminate amounts, including punitive or exemplary damages, and may remain unresolved for several years. For example, the Company is a defendant in numerous lawsuits arising out of the use of body powders containing talc, primarily JOHNSON'S Baby Powder, and the Company's sale, manufacturing and marketing of opioids. While the Company believes it has substantial defenses in these matters, it is not feasible to predict the ultimate outcome of litigation. The Company could in the future be required to pay significant amounts as a result of settlements or judgments in these matters, potentially in excess of accruals, including matters where the Company could be held jointly and severally liable among other defendants. The resolution of, or increase in accruals for, one or more of these matters in any reporting period could have a material adverse effect on the Company's results of operations and cash flows for that period. The Company does not purchase third-party product liability insurance; however, the Company utilizes a wholly owned captive insurance company subject to certain limits.

Product reliability, safety and effectiveness concerns can have significant negative impacts on sales and results of operations, lead to litigation and cause reputational damage.

Concerns about product safety, whether raised internally or by litigants, regulators or consumer advocates, and whether or not based on scientific evidence, can result in safety alerts, product recalls, governmental investigations, regulatory action on the part of the U.S. FDA (or its counterpart in other countries), private claims and lawsuits, payment of fines and settlements, declining sales and reputational damage. These circumstances can also result in damage to brand image, brand equity and consumer trust in the Company's products. Product recalls have in the past, and could in the future, prompt government investigations and inspections, the shutdown of manufacturing facilities, continued product shortages and related sales declines, significant remediation costs, reputational damage, possible civil penalties and criminal prosecution.

The Company faces significant regulatory scrutiny, which imposes significant compliance costs and exposes the Company to government investigations, legal actions and penalties.

The rapid increase in new government laws and regulations imposes significant compliance costs to the Company and a failure of the Company to timely implement changes to comply with these new laws may expose the Company to investigations, legal actions or penalties. Regulatory issues regarding compliance with current Good Manufacturing Practices (cGMP) (and comparable quality regulations in foreign countries) by manufacturers of drugs and devices can lead to fines and penalties, product recalls, product shortages, interruptions in production, delays in new product approvals and litigation. In addition, the marketing, pricing and sale of the Company's products are subject to regulation, investigations and legal actions including under the Federal Food, Drug, and Cosmetic Act, the Medicaid Rebate Program, federal and state false claims acts, state unfair trade practices acts and consumer protection laws. Scrutiny of healthcare industry business practices by government agencies and state attorneys general in the U.S., and any resulting investigations and prosecutions, carry risk of significant civil and criminal penalties including, but not limited to, debarment from participation in government healthcare programs. Any such debarment could have a material adverse effect on the Company's business and results of operations. The most significant current investigations and litigation brought by government agencies are described in Note 19 Legal proceedings—Government proceedings under Notes to the Consolidated Financial Statements included in Item 8 of this Report.

Changes in tax laws or exposures to additional tax liabilities could negatively impact the Company's operating results.

Changes in tax laws or regulations around the world, including in the U.S. and as led by the Organization for Economic Cooperation and Development, such as the recent enactment by certain EU and non-EU countries, and the anticipated enactment by additional countries, of a global minimum tax, could negatively impact the Company's effective tax rate and results of operations. A change in statutory tax rate or certain international tax provisions in any country would result in the revaluation of the Company's deferred tax assets and liabilities related to that particular jurisdiction in the period in which the new tax law is enacted. This change would result in an expense or benefit recorded to the Company's Consolidated Statement of Earnings. The Company closely monitors these proposals as they arise in the countries where it operates. Changes to tax laws or regulations may occur at any time, and any related expense or benefit recorded may be material to the fiscal quarter and year in which the law change is enacted.

See Note 8 Income taxes under Notes to the Consolidated Financial Statements included in Item 8 of this Report for additional information.

The Company conducts business and files tax returns in numerous countries and is addressing tax audits and disputes with many tax authorities. In connection with various government initiatives, companies are required to disclose more information to tax authorities on operations around the world, which may lead to greater audit scrutiny of profits earned in other countries. The Company regularly assesses the likely outcomes of its tax audits and disputes to determine the appropriateness of its tax reserves. However, any tax authority could take a position on tax treatment that is contrary to the Company's expectations, which could result in tax liabilities in excess of reserves.

Risks related to our intellectual property

The Company faces increased challenges to intellectual property rights central to its business.

The Company owns or licenses a significant number of patents and other proprietary rights relating to its products and manufacturing processes. These rights are essential to the Company's businesses and materially important to the Company's results of operations. Public policy, both within and outside the U.S., has become increasingly unfavorable toward intellectual property rights. The Company cannot be certain that it will obtain adequate patent protection for new products and technologies in the United States and other important markets or that such protections, once granted, will last as long as originally anticipated.

Competitors routinely challenge the validity or extent of the Company's owned or licensed patents and proprietary rights through litigation, interferences, oppositions and other proceedings, such as inter partes review (IPR) proceedings before the United States Patent & Trademark Office (USPTO). These proceedings absorb resources and can be protracted as well as unpredictable. In addition, challenges that the Company's products infringe the patents of third parties could result in an injunction and/or the need to pay past damages and future royalties and adversely affect the competitive position and sales of the products in question.

The Company has faced increasing patent challenges from third parties seeking to manufacture and market generic and biosimilar versions of the Company's key pharmaceutical products prior to expiration of the applicable patents covering those products. In the U.S., manufacturers of generic versions of innovative human pharmaceutical products may challenge the validity, or claim non-infringement, of innovator products through the Abbreviated New Drug Application, or ANDA, process with the U.S. FDA and related ANDA litigation. The Biologics Price Competition and Innovation Act (BPCIA), enacted in 2010, which created a new regulatory pathway for the approval by the U.S. FDA of biosimilar alternatives to innovator-developed biological products, also created mechanisms for biosimilar applicants to challenge the patents on the innovator biologics. The IPR process with the USPTO is also being used by competitors to challenge patents asserted in litigation.

In the event the Company is not successful in defending its patents against such challenges, or upon the "at-risk" launch by the generic or biosimilar firm of its product, the Company can lose a major portion of revenues for the referenced product in a very short period of time. Current legal proceedings involving the Company's patents and other intellectual property rights are described in Note 19 Legal proceedings—Intellectual property under Notes to the Consolidated Financial Statements included in Item 8 of this Report.

Risks related to product development, regulatory approval and commercialization

Significant challenges or delays in the Company's innovation, development and implementation of new products, technologies and indications could have an adverse impact on the Company's long-term success.

The Company's continued growth and success depends on its ability to innovate and develop new and differentiated products and services that address the evolving healthcare needs of patients, providers and consumers. Development of successful products and technologies is also necessary to offset revenue losses when the Company's existing products lose market share due to various factors such as competition and loss of patent exclusivity. New products introduced within the past five years accounted for approximately 25% of 2023 sales. The Company cannot be certain when or whether it will be able to develop, license or otherwise acquire companies, products and technologies, whether particular product candidates will be granted regulatory approval, and, if approved, whether the products will be commercially successful.

The Company pursues product development through internal research and development as well as through collaborations, acquisitions, joint ventures and licensing or other arrangements with third parties. In all of these contexts, developing new products, particularly pharmaceutical and biotechnology products and medical devices, requires significant investment of resources over many years. Only a very few biopharmaceutical research and development programs result in commercially viable products. The process depends on many factors including the ability to: discern patients' and healthcare providers' future needs; develop promising new compounds, strategies and technologies; achieve successful clinical trial results; secure effective intellectual property protection; obtain regulatory approvals on a timely basis; and, if and when they reach the market, successfully differentiate the Company's products from competing products and approaches to treatment. New products or enhancements to existing products may not be accepted quickly or significantly in the marketplace due to product and price competition, changes in customer preferences or healthcare purchasing patterns, resistance by healthcare providers or uncertainty over third-party reimbursement. Even following initial regulatory approval, the success of a product can be adversely impacted by safety and efficacy findings in larger real-world patient populations, as well as market entry of competitive products.

The Company leverages the use of data science, machine learning and other forms of AI and emerging technologies across varying parts of its business and operations, and the introduction and incorporation of AI may result in unintended consequences or other new or expanded risks and liabilities. AI technology is continuously evolving, and the AI technologies we develop and adopt may become obsolete earlier than planned. Our investments in these technologies may not result in the benefits we anticipate or enable us to obtain or maintain a competitive advantage. The application of machine learning and AI in our business is emerging and evolving alongside new laws and regulations that may entail significant costs or ultimately limit our ability to continue the use of these technologies. These technologies also carry inherent risks related to data privacy and security further described below.

Risks related to financial and economic market conditions

The Company faces a variety of financial, economic, legal, social and political risks associated with conducting business internationally.

The Company's extensive operations and business activity throughout the world are accompanied by certain financial, economic, legal, social and political risks, including those listed below.

Foreign currency exchange: In fiscal 2023, approximately 45% of the Company's sales occurred outside of the U.S., with approximately 24% in Europe, 5% in the Western Hemisphere, excluding the U.S., and 16% in the Asia-Pacific and Africa region. Changes in non-U.S. currencies relative to the U.S. dollar impact the Company's revenues and expenses. While the Company uses financial instruments to mitigate the impact of fluctuations in currency exchange rates on its cash flows, unhedged exposures continue to be subject to currency fluctuations. In addition, the weakening or strengthening of the U.S. dollar may result in significant favorable or unfavorable translation effects when the operating results of the Company's non-U.S. business activity are translated into U.S. dollars.

Inflation and currency devaluation risks: The Company faces challenges in maintaining profitability of operations in economies experiencing high inflation rates. Specifically, the Company has accounted for operations in Argentina, Turkey and Venezuela as highly inflationary, as the prior three-year cumulative inflation rate surpassed 100%. While the Company strives to maintain profit margins in these areas through cost reduction programs, productivity improvements and periodic price increases, it might experience operating losses as a result of continued inflation. In addition, the impact of currency devaluations in

countries experiencing high inflation rates or significant currency exchange fluctuations could negatively impact the Company's operating results.

Illegal importation of pharmaceutical products: The illegal importation of pharmaceutical products from countries where government price controls or other market dynamics result in lower prices may adversely affect the Company's sales and profitability in the U.S. and other countries in which the Company operates. With the exception of limited quantities of prescription drugs for personal use, foreign imports of pharmaceutical products are illegal under current U.S. law. However, the volume of illegal imports continues to rise as the ability of patients and other customers to obtain the lower-priced imports has grown significantly.

Anti-bribery and other regulations: The Company is subject to various federal and foreign laws that govern its international business practices with respect to payments to government officials. Those laws include the U.S. Foreign Corrupt Practices Act (FCPA), which prohibits U.S. publicly traded companies from promising, offering, or giving anything of value to foreign officials with the corrupt intent of influencing the foreign official for the purpose of helping the Company obtain or retain business or gain any improper advantage. The Company's business is heavily regulated and therefore involves significant interaction with foreign officials. Also, in many countries outside the U.S., the healthcare providers who prescribe human pharmaceuticals are employed by the government and the purchasers of human pharmaceuticals are government entities; therefore, the Company's interactions with these prescribers and purchasers are subject to regulation under the FCPA. In addition to the U.S. application and enforcement of the FCPA, various jurisdictions in which the Company operates have laws and regulations, including the U.K. Bribery Act 2010, aimed at preventing and penalizing corrupt and anticompetitive behavior. Enforcement activities under these laws could subject the Company to additional administrative and legal proceedings and actions, which could include claims for civil penalties, criminal sanctions, and administrative remedies, including exclusion from healthcare programs.

Other financial, economic, legal, social and political risks. Other risks inherent in conducting business globally include:

- local and regional economic environments and policies in the markets that we serve, including interest rates, monetary policy, inflation, economic growth, recession, commodity prices, and currency controls or other limitations on the ability to expatriate cash;
- protective economic policies taken by governments, such as trade protection measures, increased antitrust reporting requirements and enforcement activity, and import/export licensing requirements;
- compliance with local regulations and laws including, in some countries, regulatory requirements restricting the Company's ability to manufacture or sell its products in the relevant market;
- diminished protection of intellectual property and contractual rights in certain jurisdictions;
- potential nationalization or expropriation of the Company's foreign assets;
- political or social upheavals, economic instability, repression, or human rights issues; and
- geopolitical events, including natural disasters, disruptions to markets due to war, armed conflict, terrorism, epidemics or pandemics.

Due to the international nature of the Company's business, geopolitical or economic changes or events, including global tensions and war, could adversely affect our business, results of operations or financial condition.

As described above, the Company has extensive operations and business activity throughout the world. Global tensions, conflict and/or war among any of the countries in which we conduct business or distribute our products may result in foreign currency volatility, decreased demand for our products in affected countries, and challenges to our global supply chain related to increased costs of materials and other inputs for our products and suppliers. Most recently, we have experienced, and expect to continue to experience, impacts to the Company's business resulting from the Russia-Ukraine war, rising conflict in the Middle East as well as increasing tensions between the U.S. and China. In response to heightened conflict, such as the Russia-Ukraine war, governments may impose export controls and broad financial and economic sanctions. Our business and operations may be further impacted by the imposition of trade protection measures or other policies adopted by any country that favor domestic companies and technologies over foreign competitors. Additional sanctions or other measures may be imposed by the global community, including but not limited to limitations on our ability to file, prosecute and maintain patents, trademarks and other intellectual property rights. Furthermore, in some countries, such as in Russia, action may be taken that allows companies and individuals to exploit inventions owned by patent holders from the United States and many other countries without consent or compensation and we may not be able to prevent third parties from practicing the Company's inventions in Russia or from selling or importing products in and into Russia.

Weak financial performance, failure to maintain a satisfactory credit rating or disruptions in the financial markets could adversely affect our liquidity, capital position, borrowing costs and access to capital markets.

We currently maintain investment grade credit ratings with Moody's Investors Service and Standard & Poor's Ratings Services. Rating agencies routinely evaluate us, and their ratings of our long-term and short-term debt are based on a number of factors. Any downgrade of our credit ratings by a credit rating agency, whether as a result of our actions or factors which are beyond our control, can increase the cost of borrowing under any indebtedness we may incur, reduce market capacity for our commercial paper or require the posting of additional collateral under our derivative contracts. There can be no assurance that we will be able to maintain our credit ratings, and any additional actual or anticipated changes or downgrades in our credit ratings, including any announcement that our ratings are under review for a downgrade, may have a negative impact on our liquidity, capital position and access to capital markets.

Other risks

Our business depends on our ability to recruit and retain talented, highly skilled employees and a diverse workforce.

Our continued growth requires us to recruit and retain talented employees representing diverse backgrounds, experiences, and skill sets. The market for highly skilled workers and leaders in our industry is extremely competitive and our ability to compete depends on our ability to hire, develop and motivate highly skilled personnel in all areas of our organization. Maintaining our brand and reputation, as well as a diverse, equitable and inclusive work environment enables us to attract top talent. If we are less successful in our recruiting efforts, or if we cannot retain highly skilled workers and key leaders, our ability to develop and deliver successful products and services may be adversely affected. In addition, effective succession planning is important to our long-term success. Any unsuccessful implementation of our succession plans or failure to ensure effective transfer of knowledge and smooth transitions involving key employees could adversely affect our business, financial condition, or results of operations.

Climate change or legal, regulatory or market measures to address climate change may negatively affect our business and results of operations.

Climate change resulting from increased concentrations of carbon dioxide and other greenhouse gases in the atmosphere could present risks to our operations, including an adverse impact on global temperatures, weather patterns and the frequency and severity of extreme weather and natural disasters. Natural disasters and extreme weather conditions, such as a hurricane, tornado, earthquake, wildfire or flooding, may pose physical risks to our facilities and disrupt the operation of our supply chain. The impacts of the changing climate on water resources may result in water scarcity, limiting our ability to access sufficient high-quality water in certain locations, which may increase operational costs.

Concern over climate change may also result in new or additional legal or regulatory requirements designed to reduce greenhouse gas emissions and/or mitigate the effects of climate change on the environment. If such laws or regulations are more stringent than current legal or regulatory obligations, we may experience disruption in, or an increase in the costs associated with sourcing, manufacturing and distribution of our products, which may adversely affect our business, results of operations or financial condition. Further, the impacts of climate change have an influence on customer preferences, and failure to provide climate-friendly products could potentially result in loss of market share.

An information security incident, including a cybersecurity breach, could have a negative impact on the Company's business or reputation.

To meet business objectives, the Company relies on both internal information technology (IT) systems and networks, and those of third parties and their vendors, to process and store sensitive data, including confidential research, business plans, financial information, intellectual property, and personal data that may be subject to legal protection, and ensure the continuity of the Company's supply chain and operations. The extensive information security and cybersecurity threats, which affect companies globally, pose a risk to the security and availability of these systems and networks, including customer products that are connected to or rely on such systems and networks, and the confidentiality, integrity, and availability of the Company's sensitive data. The Company assesses these threats and makes investments to increase internal protection, detection, and response capabilities, as well as ensure the Company's third-party providers have required capabilities and controls, to address this risk. Because of the frequently changing attack techniques, along with the increased volume and sophistication of the attacks, there is the potential for the Company to be adversely impacted. This impact could result in reputational, competitive, operational or other business harm as well as financial costs and regulatory action. Also, increasing use of AI could increase these risks. The Company maintains cybersecurity insurance in the event of an information security or cyber incident; however, the coverage may not be sufficient to cover all financial, legal, business or reputational losses.

As a result of increased global tensions, the Company expects there will continue to be, an increased risk of information security or cybersecurity incidents, including cyberattacks perpetrated by adversaries of countries where the Company maintains operations. Given the potential sophistication of these attacks, the Company may not be able to address the threat of information security or cybersecurity incidents proactively or implement adequate preventative measures and we may not be able to detect and address any such disruption or security breach promptly, or at all, which could adversely affect our business, results of operations or financial condition. Moreover, these threats could also impact our third-party partners resulting in compromise of the Company's IT systems, networks and data which could negatively affect the Company.

A breach of privacy laws or unauthorized access, loss or misuse of personal data could have a negative impact on the Company's business or reputation.

The Company is subject to privacy and data protection laws across the globe that impose broad compliance obligations on the collection, use, storage, access, transfer and protection of personal data. Breach of such requirements could result in substantial fines, penalties, private right of actions, claims and damage to our reputation and business. New privacy laws are expected in other territories, together with greater privacy enforcement by governmental authorities globally, particularly on data localization requirements and international data flows. The Company has established privacy compliance programs and controls that our businesses worldwide are required to comply with, but with many technology and data-driven initiatives being prioritized across the Company and involving multiple vendors and third parties, there are potential risks of controls imposed on cross border data flows, unauthorized access, and loss of personal data through internal and external threats that could impact our business operations and research activities.

The Company may be unable to achieve some or all of the anticipated strategic and financial benefits following the separation of Kenvue Inc. (Kenvue), including with respect to the Company's remaining ownership interest.

The Company incurred significant expenses in connection with the Kenvue separation (the Separation). In addition, the Company may not be able to achieve the full strategic and financial benefits that are expected to result from the Separation. The anticipated benefits of the Separation were based on a number of assumptions, some of which may prove incorrect. The Company holds a 9.5% ownership interest in Kenvue. The Company cannot predict the trading price of shares of Kenvue's common stock and the market value of the Kenvue shares are subject to market volatility and other factors outside of the Company's control. The Company intends to divest its ownership interest in Kenvue, but there can be no assurance regarding the ultimate timing of such divestiture. Unanticipated developments could delay, prevent or otherwise adversely affect the divestiture, including but not limited to financial market conditions.

The Separation could result in substantial tax liability.

The Company received a private letter ruling from the IRS as to the tax-free nature of the Separation under the U.S. Internal Revenue Code of 1986, as amended. Notwithstanding the private letter ruling and opinions of tax advisors, if the IRS determines that certain steps of the transaction did not qualify for tax-free treatment for U.S. federal income tax purposes, the resulting tax liability to the Company and its shareholders could be substantial. The Separation may also not qualify for tax-free treatment in other countries around the world, and as a result may trigger substantial tax liability to the Company.

Item 1B. Unresolved staff comments

Not applicable.

Item 1C. Cybersecurity

Risk management and strategy

The Company has documented cybersecurity policies and standards, assesses risks from cybersecurity threats, and monitors information systems for potential cybersecurity issues. To protect the Company's information systems from cybersecurity threats, the Company uses various security tools supporting protection, detection, and response capabilities. The Company maintains a cybersecurity incident response plan to help ensure a timely, consistent response to actual or attempted cybersecurity incidents impacting the Company.

The Company also identifies and assesses third-party risks within the enterprise, and through the Company's use of third-party service providers, across a range of areas including data security and supply chain through a structured third-party risk management program.

The Company maintains a formal information security training program for all employees that includes training on matters such as phishing and email security best practices. Employees are also required to complete mandatory training on data privacy.

To evaluate and enhance its cybersecurity program, the Company periodically utilizes third-party experts to undertake maturity assessments of the Company's information security program.

To date, the Company is not aware of any cybersecurity incident that has had or is reasonably likely to have a material impact on the Company's business or operations; however, because of the frequently changing attack techniques, along with the increased volume and sophistication of the attacks, there is the potential for the Company to be adversely impacted. This impact could result in reputational, competitive, operational or other business harm as well as financial costs and regulatory action. Refer to the risk factor captioned An information security incident, including a cybersecurity breach, could have a negative impact to the Company's business or reputation in Part I, Item 1A. Risk factors for additional description of cybersecurity risks and potential related impacts on the Company.

Governance - management's responsibility

The Company takes a risk-based approach to cybersecurity and has implemented cybersecurity controls designed to address cybersecurity threats and risks. The Chief Information Officer (CIO), who is a member of the Company's Executive Committee, and the Chief Information Security Officer (CISO) are responsible for assessing and managing cybersecurity risks, including the prevention, mitigation, detection, and remediation of cybersecurity incidents.

The Company's CISO, in coordination with the CIO, is responsible for leading the Company's cybersecurity program and management of cybersecurity risk. The current CISO has over twenty-five years of experience in information security, and his background includes technical experience, strategy and architecture focused roles, cyber and threat experience, and various leadership roles.

Governance - board oversight

The Company's Board of Directors oversees the overall risk management process, including cybersecurity risks, directly and through its committees. The Regulatory Compliance & Sustainability Committee (RCSC) of the board is primarily responsible for oversight of risk from cybersecurity threats and oversees compliance with applicable laws, regulations and Company policies related to, among others, privacy and cybersecurity.

RCSC meetings include discussions of specific risk areas throughout the year including, among others, those relating to cybersecurity. The CISO provides at least two updates each year to RCSC on cybersecurity matters. These reports include an overview of the cybersecurity threat landscape, key cybersecurity initiatives to improve the Company's risk posture, changes in the legal and regulatory landscape relative to cybersecurity, and overviews of certain cybersecurity incidents that have occurred within the Company and within the industry.

Item 2. Properties

The Company's subsidiaries operate 61 manufacturing facilities occupying approximately 9.8 million square feet of floor space. The manufacturing facilities are used by the industry segments of the Company's business approximately as follows:

Segment	Square Feet (in thousands)
Innovative Medicine	5,026
MedTech	4,782
Worldwide Total	9,808

Within the U.S., five facilities are used by the Innovative Medicine segment and 18 by the MedTech segment. Outside of the U.S., 13 facilities are used by the Innovative Medicine segment and 25 by the MedTech segment.

The locations of the manufacturing facilities by major geographic areas of the world are as follows:

Geographic Area	Number of Facilities	Square Feet (in thousands)
United States	23	2,973
Europe	20	4,900
Western Hemisphere, excluding U.S.	5	692
Africa, Asia and Pacific	13	1,243
Worldwide Total	61	9,808

In addition to the manufacturing facilities discussed above, the Company maintains numerous office and warehouse facilities throughout the world.

The Company's subsidiaries generally seek to own, rather than lease, their manufacturing facilities, although some, principally in non-U.S. locations, are leased. Office and warehouse facilities are often leased. The Company also engages contract manufacturers.

The Company is committed to maintaining all of its properties in good operating condition.

Segment information on additions to property, plant and equipment is contained in Note 17 Segments of business and geographic areas of the Notes to Consolidated Financial Statements included in Item 8 of this Report.

Item 3. Legal proceedings

The information called for by this item is incorporated herein by reference to the information set forth in Note 19 Legal proceedings of the Notes to Consolidated Financial Statements included in Item 8 of this Report.

Item 4. Mine safety disclosures

Not applicable.

Executive officers of the registrant

Listed below are the executive officers of the Company. There are no family relationships between any of the executive officers, and there is no arrangement or understanding between any executive officer and any other person pursuant to which the executive officer was selected. At the annual meeting of the Board of Directors, the executive officers are elected by the Board to hold office for one year and until their respective successors are elected and qualified, or until earlier resignation or removal.

Name	Age	Position
Vanessa Broadhurst	55	Member, Executive Committee; Executive Vice President, Global Corporate Affairs[(a)]
Joaquin Duato	61	Chairman of the Board; Chief Executive Officer[(b)]
Peter M. Fasolo, Ph.D.	61	Member, Executive Committee; Executive Vice President, Chief Human Resources Officer[(c)]
Elizabeth Forminard	53	Member, Executive Committee; Executive Vice President, General Counsel[(d)]

Joseph J. Wolk	57	Member, Executive Committee; Executive Vice President, Chief Financial Officer[(k)]

(a) Ms. V. Broadhurst was named Executive Vice President, Global Corporate Affairs and appointed to the Executive Committee in 2022. Ms. Broadhurst rejoined the Company in 2017 and was appointed Company Group Chairman, Global Commercial Strategy Organization in 2018. From 2013 to 2017, she held General Manager roles at Amgen in Inflammation & Cardiovascular, and Cardiovascular & Bone. Prior to her roles at Amgen, she served in various leadership roles at the Company from 2005-2013.

(b) Mr. J. Duato became Chairman of the Board of Directors in January 2023 subsequent to his appointments as Chief Executive Officer and Director in January 2022. Mr. Duato was appointed to the Executive Committee in 2016 when he was named Executive Vice President, Worldwide Chairman, Pharmaceuticals and subsequently served as Vice Chairman of the Executive Committee. Mr. Duato first joined the Company in 1989 with Janssen-Farmaceutica S.A. (Spain), a subsidiary of the Company, and held executive positions of increasing responsibility in all business sectors and across multiple geographies and functions.

(c) Dr. P. M. Fasolo was appointed to the Executive Committee in 2011 and was named Executive Vice President, Chief Human Resources Officer in 2016. He first joined the Company in 2004 as Worldwide Vice President, Human Resources in the MedTech segment, and subsequently served as the Company's Chief Talent Officer. He left Johnson & Johnson in 2007 to join Kohlberg Kravis Roberts & Co. as Chief Talent Officer and returned to the Company in 2010 as the Vice President, Global Human Resources.

(d) Ms. E. Forminard was appointed as Executive Vice President, General Counsel and a member of the Executive Committee in October 2022. Ms. Forminard joined the Company in 2006, serving in roles of increasing responsibility including General Counsel Medical Devices & Diagnostics, General Counsel Consumer Group & Supply Chain, Worldwide Vice President Corporate Governance, and in her immediate past role as General Counsel Pharmaceuticals.

(e) Dr. W. Hait was appointed Executive Vice President, Chief External Innovation, Medical Safety and Global Public Health Officer, and a member of the Executive Committee in 2022. He first joined the Company in 2007 and has served in a number of leadership roles including

Global Head, Janssen Research & Development from 2011 to 2018 and Global Head, Johnson & Johnson Global External Innovation from 2018 to 2022.

(f) Dr. J. C. Reed joined the Company in 2023 as Executive Vice President, Innovative Medicine, R&D and a member of the Executive Committee. Prior to joining the Company, Dr. Reed held executive leadership positions at Sanofi (2018-2022) and Roche (2013-2018), serving on their respective executive committees. He also served as CEO of Sanford-Burnham Medical Research Institute (now Sanford Burnham Prebys) where he established multiple therapeutic area-aligned research centers and platform technology centers.

(g) Mr. T. Schmid was named as Executive Vice President, Worldwide Chairman, MedTech and appointed to the Executive Committee in October 2023. He joined the Company in 1993 and has served in leadership positions throughout Johnson & Johnson MedTech, including Chief Strategic Customer Officer and President of Ethicon, and most recently served as Company Group Chairman MedTech Asia Pacific from 2018-2023.

(h) Mr. J. Swanson was appointed Executive Vice President, Chief Information Officer and a member of the Executive Committee in 2022. He rejoined the Company in 2019 as Chief Information Officer of Johnson & Johnson from Bayer Crop Science, where he served as a member of the Executive Leadership Team and as Chief Information Officer and Head of Digital Transformation. From 1996 to 2005, Mr. Swanson held positions of increasing responsibility at the Company, including Project Manager, Director IT, Sr. Director IT and Vice President, Chief Information Officer.

(i) Ms. J. L. Taubert was appointed Executive Vice President, Worldwide Chairman, Innovative Medicine (formerly Pharmaceuticals) and a member of the Executive Committee in 2018. She joined the Company in 2005 as Worldwide Vice President and held several executive positions of increasing responsibility in the Pharmaceuticals sector, including Company Group Chairman, North America, and Company Group Chairman, The Americas from 2012-2018.

(j) Ms. K. E. Wengel was appointed Executive Vice President, Chief Technical Operations & Risk Officer in 2023, subsequent to her appointment to the Executive Committee in 2018 when she was named as Executive Vice President, Chief Global Supply Chain Officer. Ms. Wengel first joined the Company in 1988 as Project Engineer and Engineering Supervisor at Janssen, a subsidiary of the Company. During her tenure with the Company, she has held a variety of strategic leadership and executive positions, including in roles within operations, quality, engineering, new products, information technology, and other technical and business functions.

(k) Mr. J. J. Wolk was appointed Executive Vice President, Chief Financial Officer and a member of the Executive Committee in July 2018. He first joined the Company in 1998 as Finance Manager, Business Development for Ortho-McNeil, a subsidiary of the Company. During his tenure at the Company, he has held a variety of senior leadership roles in several segments and functions across the Company's subsidiaries, including Vice President, Finance and Chief Financial Officer of the Janssen Pharmaceutical Companies, and Vice President, Investor Relations.

Part II

Item 5. Market for registrant's common equity, related stockholder matters and issuer purchases of equity securities

As of February 9, 2024, there were 118,772 record holders of common stock of the Company. Additional information called for by this item is incorporated herein by reference to the following sections of this Report: Note 16 "Common Stock, Stock Option Plans and Stock Compensation Agreements" of the Notes to Consolidated Financial Statements included in Item 8; and Item 12 "Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters – Equity Compensation Plan Information."

Issuer purchases of equity securities

On September 14, 2022, the Company announced that its Board of Directors approved a share repurchase program, authorizing the Company to purchase up to $5.0 billion of the Company's Common Stock. The repurchase program was completed during the fiscal first quarter of 2023.

The following table provides information with respect to common stock purchases by the Company during the fiscal fourth quarter of 2023. Common stock purchases on the open market are made as part of a systematic plan to meet the needs of the Company's compensation programs. The repurchases below also include the stock-for-stock option exercises that settled in the fiscal fourth quarter.

Fiscal Period	Total Number of Shares Purchased[1]	Avg. Price Paid Per Share	Total Number of Shares (or Units) Purchased as Part of Publicly Announced Plans or Programs	Maximum Number (or Approximate Dollar Value) of Shares (or Units) that May Yet Be Purchased Under the Plans or Programs
October 2, 2023 through October 29, 2023	—	—	—	—
October 30, 2023 through November 26, 2023	125,000	$147.61	—	—
November 27, 2023 through December 31, 2023	1,265,000	$156.76	—	—
Total	**1,390,000**		**—**	

(1) During the fiscal fourth quarter of 2023, the Company repurchased an aggregate of 1,390,000 shares of Johnson & Johnson Common Stock in open-market transactions, all of which were purchased as part of a systematic plan to meet the needs of the Company's compensation programs.

Organization and business segments

Description of the company and business segments

Johnson & Johnson and its subsidiaries (the Company) have approximately 131,900 employees worldwide engaged in the research and development, manufacture and sale of a broad range of products in the healthcare field. The Company conducts business in virtually all countries of the world with the primary focus on products related to human health and well-being.

The Company is organized into two business segments: Innovative Medicine and MedTech. The Innovative Medicine segment is focused on the following therapeutic areas, including Immunology, Infectious diseases, Neuroscience, Oncology, Pulmonary Hypertension, and Cardiovascular and Metabolic diseases. Products in this segment are distributed directly to retailers, wholesalers, distributors, hospitals and healthcare professionals for prescription use. The MedTech segment includes a broad portfolio of products used in the Orthopaedic, Surgery, Interventional Solutions and Vision fields. These products are distributed to wholesalers, hospitals and retailers, and used principally in the professional fields by physicians, nurses, hospitals, eye care professionals and clinics.

The Executive Committee of Johnson & Johnson is the principal management group responsible for the strategic operations and allocation of the resources of the Company. This Committee oversees and coordinates the activities of the Innovative Medicine and MedTech business segments.

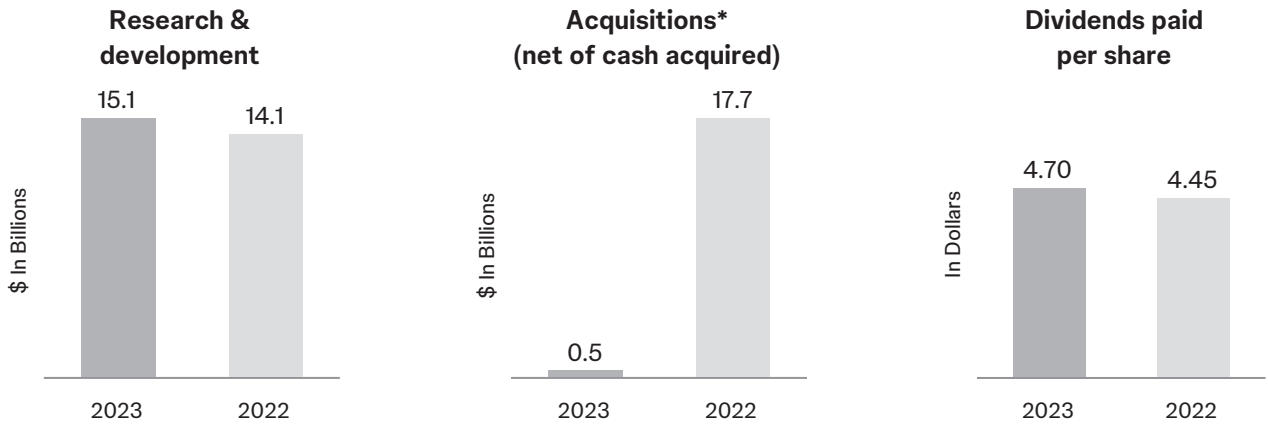
In all of its product lines, the Company competes with other companies both locally and globally, throughout the world. Competition exists in all product lines without regard to the number and size of the competing companies involved. Competition in research, involving the development and the improvement of new and existing products and processes, is particularly significant. The development of new and innovative products, as well as protecting the underlying intellectual property of the Company's product portfolio, is important to the Company's success in all areas of its business. The competitive environment requires substantial investments in continuing research.

Management's objectives

With "Our Credo" as the foundation, the Company's purpose is to blend heart, science and ingenuity to profoundly impact health for humanity. The Company, believes health is everything. The Company's strength in healthcare innovation empowers us to build a world where complex diseases are prevented, treated, and cured, where treatments are smarter and less invasive, and solutions are personal. Through the Company's expertise in Innovative Medicine and MedTech, the Company is uniquely positioned to innovate across the full spectrum of healthcare solutions today to deliver the breakthroughs of tomorrow, and profoundly impact health for humanity.

New products introduced within the past five years accounted for approximately 25% of 2023 sales. In 2023, $15.1 billion was invested in research and development reflecting management's commitment to create life-enhancing innovations and to create value through partnerships that will profoundly impact of health for humanity.

A critical driver of the Company's success is the diversity of its 131,900 employees worldwide. Employees are empowered and inspired to lead with Our Credo and purpose as guides. This allows every employee to use the Company's reach and size to advance the Company's purpose, and to also lead with agility and urgency. Leveraging the extensive resources across the enterprise enables the Company to innovate and execute with excellence. This ensures the Company can remain focused on addressing the unmet needs of society every day and invest for an enduring impact, ultimately delivering value to its patients, consumers and healthcare professionals, employees, communities and shareholders.



*Includes acquisitions of in process research and development assets that were not accounted for as a business combination

Results of operations

Analysis of consolidated sales

For discussion on results of operations and financial condition pertaining to the fiscal years 2022 and 2021 see the Company's Annual Report on Form 10-K for the fiscal year ended January 1, 2023, Item 7. Management's discussion and analysis of results of operations and financial condition. Prior periods disclosed herein were recast to reflect the continuing operations of the Company.

In 2023, worldwide sales increased 6.5% to $85.2 billion as compared to an increase of 1.6% in 2022. These sales changes consisted of the following:

Sales increase/(decrease) due to:	2023	2022
Volume	6.8%	8.3%
Price	0.6	(1.8)
Currency	(0.9)	(4.9)
Total	**6.5%**	**1.6%**

The net impact of acquisitions and divestitures on the worldwide sales growth was a positive impact of 1.5% in 2023 and no impact in 2022.

Sales by U.S. companies were $46.4 billion in 2023 and $42.0 billion in 2022. This represents increases of 10.6% in 2023 and 3.3% in 2022. Sales by international companies were $38.7 billion in 2023 and $38.0 billion in 2022. This represents an increase of 1.9% in 2023 and a decrease of 0.2% in 2022.

The five-year compound annual growth rates for worldwide, U.S. and international sales were 4.7%, 5.2% and 4.1%, respectively. The ten-year compound annual growth rates for worldwide, U.S. and international sales were 4.2%, 5.7% and 2.6%, respectively.

In 2023, sales by companies in Europe experienced a decline of 1.2% as compared to the prior year, which included an operational decline of 2.2% and a positive currency impact of 1.0%. In fiscal 2023, the net impact of the Covid-19 Vaccine and the loss of exclusivity of Zytiga on the European regions change in operational sales was a negative 9.8%. Sales by companies in the Western Hemisphere, excluding the U.S., achieved growth of 10.7% as compared to the prior year, which included operational growth of 15.8%, and a negative currency impact of 5.1%. Sales by companies in the Asia-Pacific, Africa region achieved growth of 3.9% as compared to the prior year, including operational growth of 9.5% and a negative currency impact of 5.6%.

In 2023, the Company utilized three wholesalers distributing products for both segments that represented approximately 18.2%, 15.1% and 14.2% of the total consolidated revenues. In 2022, the Company had three wholesalers distributing products for both segments that represented approximately 18.9%, 15.0% and 13.8% of the total consolidated revenues.

Analysis of sales by business segments

Innovative Medicine segment[(1)]

Innovative Medicine segment sales in 2023 were $54.8 billion, an increase of 4.2% from 2022, which included operational growth of 4.8% and a negative currency impact of 0.6%. U.S. sales were $31.2 billion, an increase of 9.0%. International sales were $23.6 billion, a decrease of 1.5%, which included an operational decline of 0.2% and a negative currency impact of 1.3%. In 2023, acquisitions and divestitures had a net negative impact of 0.1% on the operational sales growth of the worldwide Innovative Medicine segment.

(1) Previously referred to as Pharmaceutical

(2) Inclusive of RISPERDAL CONSTA which was previously disclosed separately

(3) Inclusive of INVOKANA which was previously disclosed separately

Immunology products achieved sales of $18.1 billion in 2023, representing an increase of 6.6% as compared to the prior year. Increased sales of STELARA (ustekinumab) were primarily driven by patient mix, market growth, and continued strength in Inflammatory Bowel Disease. Growth of TREMFYA (guselkumab) was due to market growth, continued strength in PsO/PsA (Psoriasis and Psoriatic Arthritis) and patient mix. Additionally, SIMPONI/SIMPONI ARIA growth was driven by growth outside the U.S. Lower sales of REMICADE (infliximab) were due to biosimilar competition.

Biosimilar versions of REMICADE have been introduced in the United States and certain markets outside the United States and additional competitors continue to enter the market. Continued infliximab biosimilar competition will result in a further reduction in sales of REMICADE.

Sales of STELARA in the United States were approximately $7.0 billion in fiscal 2023. Third parties have filed abbreviated Biologics License Applications with the FDA seeking approval to market biosimilar versions of STELARA. The Company has settled certain litigation under the Biosimilar Price Competition and Innovation Act of 2009. As a result of these settlements and other agreements with separate third parties, the Company does not anticipate the launch of a biosimilar version of STELARA until January 1, 2025 in the United States.

Infectious disease products sales were $4.4 billion in 2023, a decline of 18.9% as compared to the prior year primarily driven by a decline in COVID-19 vaccine revenue and loss of exclusivity of PREZISTA.

Neuroscience products sales were $7.1 billion in 2023, representing an increase of 3.6% as compared to the prior year. The growth of SPRAVATO (esketamine) was driven by ongoing launches as well as increased physician confidence and patient demand. Growth was partially offset by declines in RISPERDAL/RISPERDAL CONSTA and the paliperidone long-acting injectables outside the U.S. due to the XEPLION loss of exclusivity in the European Union.

Oncology products achieved sales of $17.7 billion in 2023, representing an increase of 10.5% as compared to the prior year. Sales of DARZALEX (daratumumab) were driven by continued share gains in all regions and market growth. Growth of ERLEADA (apalutamide) was due to continued share gains and market growth in Metastatic Castration Resistant Prostate Cancer. Sales of CARVYKTI (ciltacabtagene autoleucel) were driven by the ongoing launch, share gains and capacity improvement. Additionally, sales from the launch of TECVAYLI (teclistamab-cqyv) and TALVEY (talquetamab-tgvs), included in Other Oncology, contributed to the growth. Growth was partially offset by ZYTIGA (abiraterone acetate) due to loss of exclusivity and IMBRUVICA (ibrutinib) due to global competitive pressures.

Pulmonary Hypertension products sales were $3.8 billion, representing an increase of 11.6% as compared to the prior year. Sales growth was due to favorable patient mix, share gains and market growth from UPTRAVI (selexipag) and OPSUMIT (macitentan) partially offset by declines in Other Pulmonary Hypertension.

Cardiovascular/Metabolism/Other products sales were $3.7 billion, a decline of 5.5% as compared to the prior year. The decline of XARELTO (rivaroxaban) sales was primarily driven by unfavorable patient mix and access changes.

The Company maintains a policy that no end customer will be permitted direct delivery of product to a location other than the billing location. This policy impacts contract pharmacy transactions involving non-grantee 340B covered entities for most of the Company's drugs, subject to multiple exceptions. Both grantee and non-grantee covered entities can maintain certain contract pharmacy arrangements under policy exceptions. The Company has been and will continue to offer 340B discounts to covered entities on all of its covered outpatient drugs, and it believes its policy will improve its ability to identify inappropriate duplicate discounts and diversion prohibited by the 340B statute. The 340B Drug Pricing Program is a U.S. federal government program requiring drug manufacturers to provide significant discounts on covered outpatient drugs to covered entities. This policy had discount implications which positively impacted sales to customers in 2023.

During 2023, the Company advanced its pipeline with several regulatory submissions and approvals for new drugs and additional indications for existing drugs as follows:

Product Name (Chemical Name)	Indication	US Approval	EU Approval	US Filing	EU Filing
AKEEGA (Niraparib and Abiraterone Acetate)	First-And-Only Dual Action Tablet for the Treatment of Patients with BRCA-Positive Metastatic Castration-Resistant Prostate Cancer (MAGNITUDE)	•	•		
BALVERSA (erdafitinib)	Treatment of Patients with Locally Advanced or Metastatic Urothelial Carcinoma and Selected Fibroblast Growth Factor Receptor Gene Alterations (THOR)			•	•
CARVYKTI (ciltacabtagene autoleucel)	Treatment for Relapsed and Refactor multiple myeloma with 1-3 PL (CARTITUDE-4)			•	•
EDURANT (rilpivirine)	Treatment for pediatric patients (2-12 years old) with HIV			•	•
ERLEADA (apalutamide)	Tablet reduction	•	•		
OPSUMIT (macitentan)	Treatment for pediatric pulmonary arterial hypertension				•
OPSYNVI (mecitentan/ tadalafil STCT)	Treatment for pulmonary arterial hypertension			•	•
RYBREVANT (amivantamab)	In Combination with Chemotherapy for the First-Line Treatment of Adult Patients with Advanced Non-Small Cell Lung Cancer with Activating EGFR Exon 20 Insertion Mutations (PAPILLON)			•	•
RYBREVANT / lazertinib	Treatment for Non-Small Cell Lung Cancer 2L (MARIPOSA)			•	•
RYBREVANT / lazertinib	Treatment for Non-Small Cell Lung Cancer 2L (MARIPOSA-2)			•	•
TECVAYLI (teclistamab)	Treatment of Patients with Relapsed Refractory Multiple Myeloma Biweekly Dosing		•		
TALVEY (talquetamab)	Treatment of Patients with Relapsed and Refractory Multiple Myeloma	•	•		

MedTech segment

The MedTech segment sales in 2023 were $30.4 billion, an increase of 10.8% from 2022, which included operational growth of 12.4% and a negative currency impact of 1.6%. U.S. sales were $15.3 billion, an increase of 14.2% as compared to the prior year. International sales were $15.1 billion, an increase of 7.7% as compared to the prior year, which included operational growth of 10.6% and a negative currency impact of 2.9%. In 2023, the net impact of acquisitions and divestitures on the MedTech segment worldwide operational sales growth was a positive 4.6% primarily related to the Abiomed acquisition.

Major MedTech franchise sales:

(Dollars in Millions)	2023	2022	Total Change	Operations Change	Currency Change
Surgery	**$10,037**	**9,690**	**3.6 %**	**5.5%**	**(1.9)%**

Surgical	1,370	1,306	4.9	5.8	(0.9)
Total MedTech Sales	**$30,400**	**27,427**	**10.8%**	**12.4%**	**(1.6)%**

* Percentage greater than 100% or not meaningful

The Surgery franchise sales were $10.0 billion in 2023, representing an increase of 3.6% from 2022. The growth in Advanced Surgery was primarily driven by Biosurgery global procedure growth and strength of the portfolio as well as uptake of new products in Endocutters and Energy. The growth was partially offset by competitive pressures and volume-based procurement impacts in Endocutters and Energy. The growth in General Surgery was primarily driven by increased procedures coupled with technology penetration and benefits from the differentiated Wound Closure portfolio.

The Orthopaedics franchise sales were $8.9 billion in 2023, representing an increase of 4.1% from 2022. The growth in hips reflects global procedure growth and continued strength of the portfolio partially offset by volume-based procurement impacts and Russia sanctions. The growth in knees was primarily driven by procedures, benefits from recent product additions to the ATTUNE portfolio and pull through related to the VELYS Robotic assisted solution. This was partially offset by stocking dynamics, primarily outside the U.S. The growth in Trauma was driven by global procedures and the adoption of recently launched products. This was partially offset by volume-based procurement impacts. The growth in Spine, Sports & Other was primarily driven by Digital Solutions, Shoulders, Sports and Craniomaxillofacial products partially offset by Russia sanctions and supply constraints, primarily outside the U.S.

The Interventional Solutions franchise achieved sales of $6.4 billion in 2023, representing an increase of 47.7% from 2022, which includes sales from Abiomed acquired on December 22, 2022. Electrophysiology grew by double digits due to global procedure growth, new product performance and commercial execution. This was partially offset by the impacts of volume-based procurement in China. Abiomed sales reflect the strength of all commercialized regions and continued adoption of Impella 5.5 and Impella RP.

The Vision franchise achieved sales of $5.1 billion in 2023, representing an increase of 4.6% from 2022. The Contact Lenses/Other growth was primarily driven by the continued strong performance in the ACUVUE OASYS 1-Day family including recent launches and commercial execution. This was partially offset by impacts of U.S. stocking dynamics, Russia sanctions, impacts from strategic portfolio decisions and supply challenges. The Surgical operational growth was primarily driven by cataract procedure growth, continued strength of recent innovations and reduction of prior year stocking outside the U.S. This was partially offset by softer Refractive and premium IOL markets and Russia sanctions.

Analysis of consolidated earnings before provision for taxes on income

Consolidated earnings before provision for taxes on income was $15.1 billion and $19.4 billion for the years 2023 and 2022, respectively. As a percent to sales, consolidated earnings before provision for taxes on income was 17.7% and 24.2%, in 2023 and 2022, respectively.

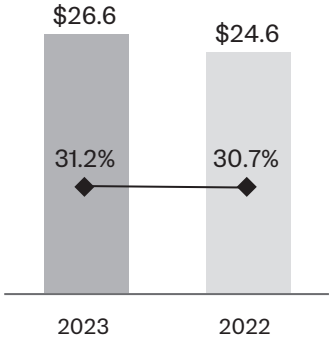
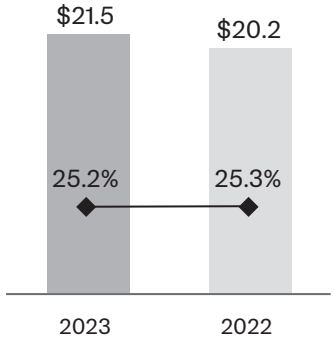
Cost of products sold



Selling, marketing & administrative



(Dollars in billions. Percentages in chart are as a percent to total sales)

Cost of products sold:

Cost of products sold increased as a percent to sales driven by:

- Commodity inflation, unfavorable product mix, restructuring related excess inventory costs and Abiomed amortization in the MedTech business

partially offset by

- Favorable patient mix and lower one-time COVID-19 vaccine manufacturing related exit costs in 2023 in the Innovative Medicine business

The intangible asset amortization expense included in cost of products sold was $4.5 billion and $3.9 billion for the fiscal years 2023 and 2022, respectively.

Selling, Marketing and Administrative expense:

Selling, Marketing and Administrative Expenses decreased slightly as a percent to sales driven by:

- Leveraging in Selling and Marketing expenses both the Innovative Medicine and MedTech businesses

partially offset by

- An increase in administrative costs

Research and Development Expense:

Research and development expense by segment of business was as follows:

	2023		2022	
(Dollars in Millions)	**Amount**	**% of Sales***	**Amount**	**% of Sales***
Innovative Medicine	$11,963	21.8%	$11,642	22.1%
MedTech	3,122	10.3	2,493	9.1
Total research and development expense	**$15,085**	**17.7%**	**$14,135**	**17.7%**
Percent increase/(decrease) over the prior year	6.7 %		(1.0%)	

*As a percent to segment sales

Research and development activities represent a significant part of the Company's business. These expenditures relate to the processes of discovering, testing and developing new products, upfront payments and developmental milestones, improving existing products, as well as ensuring product efficacy and regulatory compliance prior to launch. The Company remains committed to investing in research and development with the aim of delivering high quality and innovative products.

Research and Development was flat as a percent to sales primarily driven by:

- Higher milestone payments in the Innovative Medicine business
- Acquired in-process research & development asset from the Laminar acquisition in the MedTech business in the fiscal year 2023

offset by

- Portfolio prioritization in the Innovative Medicine business

In-Process Research and Development Impairments (IPR&D): In the fiscal year 2023, the Company recorded a charge of approximately $0.3 billion which included $0.2 billion related to market dynamics associated with a non-strategic asset (M710) acquired as part of the acquisition of Momenta Pharmaceuticals in 2020, In the fiscal year 2022, the Company recorded an intangible asset impairment charge of approximately $0.8 billion related to an in-process research and development asset, bermekimab (JnJ-77474462), an investigational drug for the treatment of Atopic Dermatitis (AD) and Hidradenitis Suppurativa (HS). Additional information regarding efficacy of the AD indication and HS indication became available which led the Company to the decision to terminate the development of bermekimab for both AD and HS. The Company acquired all rights to bermekimab from XBiotech, Inc. in the fiscal year 2020.

Other (Income) Expense, Net: Other (income) expense, net is the account where the Company records gains and losses related to the sale and write-down of certain investments in equity securities held by Johnson & Johnson Innovation - JJDC, Inc. (JJDC), changes in the fair value of securities, investment (income)/loss related to employee benefit programs, gains and losses on divestitures, certain transactional currency gains and losses, acquisition and divestiture related costs, litigation accruals and settlements, as well as royalty income.

Other (income) expense, net for the fiscal year 2023 was unfavorable by $5.8 billion as compared to the prior year primarily due to the following:

(Dollars in Billions)(Income)/Expense	2023	2022	Change
Litigation related[1]	$6.9	0.9	6.0
Changes in the fair value of securities[2]	0.6	0.7	(0.1)
COVID-19 vaccine manufacturing exit related costs	0.4	0.7	(0.3)
Acquisition, Integration and Divestiture related[3]	0.3	0.2	0.1
Employee benefit plan related	(1.4)	(1.2)	(0.2)
Other	(0.2)	(0.5)	0.3
Total Other (Income) Expense, Net	**$6.6**	**0.8**	**5.8**

(1) 2023 was primarily related to the approximately $7.0 billion charge for talc (See Note 19 to the Consolidated Financial Statements for more details) and favorable intellectual property related litigation settlements of approximately $0.3 billion. 2022 was primarily related to pelvic mesh.

(2) The fiscal 2023 includes $0.4 billion related to the unfavorable change in the fair value of the remaining stake in Kenvue and $0.4 billion related to the partial impairment of Idorsia convertible debt and the change in the fair value of the Idorsia equity securities held.

(3) 2023 primarily related to the impairment of Ponvory and one-time integration costs related to the acquisition of Abiomed. 2022 was primarily costs related to the acquisition of Abiomed.

Interest (Income) Expense: Interest income in the fiscal year 2023 was $1.3 billion as compared to interest income of $0.5 billion in the fiscal year 2022 primarily due to higher rates of interest earned on cash balances. Interest expense in the fiscal year 2023 was $0.8 billion as compared to interest expense of $0.3 billion in the fiscal year 2022 primarily due to higher interest rates on debt balances. Cash, cash equivalents and marketable securities totaled $22.9 billion at the end of 2023, and averaged $22.6 billion as compared to the cash, cash equivalents and marketable securities total of $22.3 billion and $26.9 billion average balance in 2022. The total debt balance at the end of 2023 was $29.3 billion with an average debt balance of $34.5 billion as compared to $39.6 billion at the end of 2022 and an average debt balance of $36.7 billion. The lower average cash, cash equivalents and marketable securities was primarily due to the acquisition of Abiomed in late December of 2022. The lower average debt balance was primarily due to the repayment of commercial paper.

Income before tax by segment

Income (loss) before tax by segment of business were as follows:

	Income Before Tax		Segment Sales		Percent of Segment Sales	
(Dollars in Millions)	2023	2022	2023	2022	2023	2022
Innovative Medicine	$18,246	15,647	54,759	52,563	33.3%	29.8
MedTech	4,669	4,447	30,400	27,427	15.4	16.2
Segment earnings before tax[1]	22,915	20,094	85,159	79,990	26.9	25.1
Less: Expenses not allocated to segments[2]	7,853	735				
Worldwide income before tax	$15,062	19,359	85,159	79,990	17.7%	24.2

(1) See Note 17 to the Consolidated Financial Statements for more details.

(2) Amounts not allocated to segments include interest (income) expense and general corporate (income) expense. Fiscal 2023 includes an approximately $7.0 billion charge related to talc matters and the approximately $0.4 billion unfavorable change in the fair value of the retained stake in Kenvue.

Innovative Medicine segment:

In 2023, the Innovative Medicine segment income before tax as a percent to sales was 33.3% versus 29.8% in 2022. The increase in the income before tax as a percent of sales was primarily driven by the following:

- Lower one-time COVID-19 Vaccine related exit costs of $0.7 billion in 2023 versus $1.5 billion in 2022
- Lower In-process research & development impairments of $0.2 billion in 2023 versus $0.8 billion in 2022
- Unfavorable changes in the fair value of securities in 2023 of $0.4 billion as compared to $0.7 billion in 2022
- Lower litigation related expense of $0.2 billion
- Leveraging in selling and marketing expenses
- R&D Portfolio prioritization

partially offset by

- Restructuring charges of $0.5 billion in 2023 versus $0.1 billion in 2022
- Impairment of Ponvory in 2023
- Higher milestone payments in 2023

MedTech segment:

In 2023, the MedTech segment income before tax as a percent to sales was 15.4% versus 16.2% in 2022. The decrease in the income before tax as a percent to sales was primarily driven by the following:

- Higher amortization expense of $0.5 billion in 2023 related to Abiomed
- Expense of $0.4 billion for an acquired in process research and development asset from the Laminar acquisition in 2023
- Commodity inflation in 2023

partially offset by

- Income from litigation settlements of $0.1 billion in 2023 versus expense of $0.6 billion in 2022
- Lower integration/acquisition costs related to Abiomed of $0.2 billion in 2023 versus $0.3 billion in 2022
- Leveraging in selling and marketing expenses in 2023

Restructuring: In the fiscal year 2023, the Company completed a prioritization of its research and development (R&D) investment within the Innovative Medicine segment to focus on the most promising medicines with the greatest benefit to patients. This resulted in the exit of certain programs within therapeutic areas. The R&D program exits are primarily in infectious diseases and vaccines including the discontinuation of its respiratory syncytial virus (RSV) adult vaccine program, hepatitis and HIV development. The pre-tax restructuring charge of approximately $0.5 billion in the fiscal year 2023, of which $449 million was recorded in Restructuring and $30 million was recorded in Cost of products sold on the Consolidated Statement of Earnings, included the termination of partnered and non-partnered program costs and asset impairments.

In the fiscal year 2023, the Company initiated a restructuring program of its Orthopaedics franchise within the MedTech segment to streamline operations by exiting certain markets, product lines and distribution network arrangements. The pre-tax restructuring expense of $0.3 billion in the fiscal year 2023, of which $40 million was recorded in Restructuring and $279 million was recorded in Cost of products sold on the Consolidated Statement of Earnings, primarily included inventory and instrument charges related to market and product exits.

In 2022, the Company recorded a pre-tax charge of $0.4 billion related to a restructuring program of its Global Supply Chain. The Global Supply Chain program was announced in the second quarter of 2018 and was completed in the fiscal fourth quarter of 2022.

See Note 20 to the Consolidated Financial Statements for additional details related to the restructuring programs.

Provision for Taxes on Income: The worldwide effective income tax rate from continuing operations was 11.5% in 2023 and 15.4% in 2022.

On December 15, 2022, the European Union (EU) Member States formally adopted the EU's Pillar Two Directive, which generally provides for a minimum effective tax rate of 15%, as established by the Organization for Economic Co-operation and Development (OECD) Pillar Two Framework that was supported by over 130 countries worldwide. As of December 31, 2023, several EU and non-EU countries have enacted Pillar 2 legislation with an initial effective date of January 1, 2024, with other aspects of the law effective in 2025 or later. The Company is estimating that as result of this legislation the 2024 effective tax rate will increase by approximately 1.5% or 150 basis points compared to fiscal 2023. Further legislation, guidance and regulations that may be issued in fiscal 2024, as well as other business events, may impact this estimate.

For discussion related to the fiscal 2023 provision for taxes refer to Note 8 to the Consolidated Financial Statements.

Liquidity and capital resources

Liquidity & cash flows

Cash and cash equivalents were $21.9 billion at the end of 2023 as compared to $14.1 billion at the end of 2022.

The primary sources and uses of cash that contributed to the $7.8 billion increase were:

(Dollars in billions)	
$14.1	Q4 2022 Cash and cash equivalents balance
22.8	cash generated from operating activities
0.9	net cash from investing activities
(15.8)	net cash used by financing activities
(0.1)	effect of exchange rate and rounding
$21.9	Q4 2023 Cash and cash equivalents balance

In addition, the Company had $1.1 billion in marketable securities at the end of fiscal year 2023 and $9.4 billion at the end of fiscal year 2022. See Note 1 to the Consolidated Financial Statements for additional details on cash, cash equivalents and marketable securities.

Cash flow from operations of $22.8 billion was the result of:

(Dollars In billions)	
$35.2	Net Earnings
(14.9)	gain on the Kenvue separation, net gain on sale of assets/businesses and the deferred tax provision partially offset by non-cash expenses and other adjustments primarily for depreciation and amortization, stock-based compensation, asset write-downs and charge for purchase of in process research and development assets
5.6	an increase in current and non-current liabilities
(3.5)	an increase in other current and non-current assets
2.3	an increase in accounts payable and accrued liabilities
(1.9)	an increase in accounts receivable and inventories
$22.8	Cash flow from operations

Cash flow from investing activities of $0.9 billion was primarily due to:

(Dollars in billions)	
$(4.5)	additions to property, plant and equipment
0.4	proceeds from the disposal of assets/businesses, net
(0.5)	purchases of in-process research and development assets
8.5	net sales of investments
(3.0)	credit support agreements activity, net
$0.9	Net cash from investing activities

Cash flow used for financing activities of $15.8 billion was primarily due to:

(Dollars in billions)	
$(11.8)	dividends to shareholders
(5.1)	repurchase of common stock
(10.8)	net repayment from short and long term debt
1.1	proceeds from stock options exercised/employee withholding tax on stock awards, net
(0.2)	Credit support agreements activity, net
8.0	Proceeds of short and long-term debt, net of issuance cost, related to the debt that transferred to Kenvue at separation
4.2	proceeds from Kenvue initial public offering
(1.1)	Cash transferred to Kenvue at separation
(0.1)	other and rounding
$(15.8)	Net cash used for financing activities

As of December 31, 2023, the Company's notes payable and long-term debt was in excess of cash, cash equivalents and marketable securities. As of December 31, 2023, the net debt position was $6.4 billion as compared to the prior year of $17.4 billion. The debt balance at the end of 2023 was $29.3 billion as compared to $39.6 billion in 2022. Considering recent market conditions, the Company has re-evaluated its operating cash flows and liquidity profile and does not foresee any significant incremental risk. The Company anticipates that operating cash flows, the ability to raise funds from external sources, borrowing capacity from existing committed credit facilities and access to the commercial paper markets will continue to provide sufficient resources to fund operating needs, including the Company's remaining balance to be paid on the agreement to settle opioid litigation for approximately $2.1 billion and the establishment of the approximately $9 billion reserve for talc matters (See Note 19 to the Consolidated Financial Statements for additional details). In addition, the Company monitors the global capital markets on an ongoing basis and from time to time may raise capital when market conditions are favorable.

On May 8, 2023, Kenvue, completed an initial public offering (the IPO) resulting in the issuance of 198,734,444 shares of its common stock, par value $0.01 per share (the Kenvue Common Stock), at an initial public offering of $22.00 per share for net proceeds of $4.2 billion. The excess of the net proceeds from the IPO over the net book value of the Johnson & Johnson divested interest was $2.5 billion and was recorded to additional paid-in capital. As of the closing of the IPO, Johnson & Johnson owned approximately 89.6% of the total outstanding shares of Kenvue Common Stock and at July 2, 2023, the non-controlling interest of $1.3 billion associated with Kenvue was reflected in equity attributable to non-controlling interests in the consolidated balance sheet.

On August 23, 2023, Johnson & Johnson completed the disposition of an additional 80.1% ownership of Kenvue Common Stock through an exchange offer, which resulted in Johnson & Johnson acquiring 190,955,436 shares of the Company’s common stock in exchange for 1,533,830,450 shares of Kenvue Common Stock. The $31.4 billion of Johnson & Johnson common stock received in the exchange offer is recorded in Treasury stock. Following the exchange offer, the Company owns 9.5% of the total outstanding shares of Kenvue Common Stock that was recorded in other assets within continuing operations at the fair market value of $4.3 billion as of August 23, 2023 and $3.9 billion as of December 31, 2023.

Johnson & Johnson divested net assets of $11.6 billion as of August 23, 2023, and the accumulated other comprehensive loss attributable to the Consumer Health business at that date was $4.3 billion. Additionally, at the date of the exchange offer,

Johnson & Johnson decreased the non-controlling interest by $1.2 billion to record the deconsolidation of Kenvue. This resulted in a gain on the exchange offer of $21.0 billion that was recorded in Net earnings from discontinued operations, net of taxes in the consolidated statements of earnings for the fiscal third quarter of 2023. This one-time gain includes a gain of $2.8 billion on the Kenvue Common Stock retained by Johnson & Johnson. The gain on the exchange offer qualifies as a tax-free transaction for U.S. federal income tax purposes.

On September 14, 2022, the Company announced that its Board of Directors approved a share repurchase program, authorizing the Company to purchase up to $5.0 billion of the Company's Common Stock. In the fiscal year 2022, approximately $2.5 billion was repurchased under the program. In the fiscal year 2023, $2.5 billion has been repurchased and the repurchase program was completed.

The following table summarizes the Company's material contractual obligations and their aggregate maturities as of December 31, 2023: To satisfy these obligations, the Company intends to use cash from operations.

(Dollars in Millions)	Tax Legislation (TCJA)	Debt Obligations	Interest on Debt Obligations	Total
2024	$2,029	1,469	843	4,341
2025	2,536	1,700	789	5,025
2026	—	1,997	744	2,741
2027	—	2,320	736	3,056
2028	—	2,325	691	3,016
After 2028	—	17,539	8,706	26,245
Total	**$4,565**	**27,350**	**12,509**	**44,424**

For tax matters, see Note 8 to the Consolidated Financial Statements.

Financing and market risk

The Company uses financial instruments to manage the impact of foreign exchange rate changes on cash flows. Accordingly, the Company enters into forward foreign exchange contracts to protect the value of certain foreign currency assets and liabilities and to hedge future foreign currency transactions primarily related to product costs. Gains or losses on these contracts are offset by the gains or losses on the underlying transactions. A 10% appreciation of the U.S. Dollar from the December 31, 2023 market rates would increase the unrealized value of the Company's forward contracts by $0.1 billion. Conversely, a 10% depreciation of the U.S. Dollar from the December 31, 2023 market rates would decrease the unrealized value of the Company's forward contracts by $0.1 billion. In either scenario, the gain or loss on the forward contract would be offset by the gain or loss on the underlying transaction, and therefore, would have no impact on future anticipated earnings and cash flows.

The Company hedges the exposure to fluctuations in currency exchange rates, and the effect on certain assets and liabilities in foreign currency, by entering into currency swap contracts. A 1% change in the spread between U.S. and foreign interest rates on the Company's interest rate sensitive financial instruments would either increase or decrease the unrealized value of the Company's swap contracts by approximately $1.6 billion. In either scenario, at maturity, the gain or loss on the swap contract would be offset by the gain or loss on the underlying transaction, and therefore, would have no impact on future anticipated cash flows.

The Company does not enter into financial instruments for trading or speculative purposes. Further, the Company has a policy of only entering into contracts with parties that have at least an investment grade credit rating. The counterparties to these contracts are major financial institutions and there is no significant concentration of exposure with any one counterparty. Management believes the risk of loss is remote. The Company entered into credit support agreements (CSA) with certain derivative counterparties establishing collateral thresholds based on respective credit ratings and netting agreements. See Note 6 to the Consolidated Financial Statements for additional details on credit support agreements.

The Company invests in both fixed rate and floating rate interest earning securities which carry a degree of interest rate risk. The fair market value of fixed rate securities may be adversely impacted due to a rise in interest rates, while floating rate securities may produce less income than predicted if interest rates fall. A 1% (100 basis points) change in spread on the Company's interest rate sensitive investments would either increase or decrease the unrealized value of cash equivalents and current marketable securities by less than $0.8 billion.

The Company has access to substantial sources of funds at numerous banks worldwide. In September 2023, the Company secured a new 364-day Credit Facility of $10 billion, which expires on September 5, 2024. The Company early terminated the additional 364-day revolving Credit Facility of $10 billion, which had an expiration of November 21, 2023. Interest charged on borrowings under the credit line agreement is based on either Secured Overnight Financing Rate (SOFR) Reference Rate or other applicable market rate as allowed plus applicable margins. Commitment fees under the agreement are not material.

Total borrowings at the end of 2023 and 2022 were $29.3 billion and $39.6 billion, respectively. The decrease in the debt balance was due to the repayment of commercial paper. In 2023, net debt (cash and current marketable securities, net of debt) was $6.4 billion compared to net debt of $17.4 billion in 2022. Total debt represented 30.0% of total capital (shareholders' equity and total debt) in 2023 and 34.0% of total capital in 2022. Shareholders' equity per share at the end of 2023 was $28.57 compared to $29.39 at year-end 2022.

A summary of borrowings can be found in Note 7 to the Consolidated Financial Statements.

Dividends

The Company increased its dividend in 2023 for the 61st consecutive year. Cash dividends paid were $4.70 per share in 2023 and $4.45 per share in 2022.

On January 2, 2024, the Board of Directors declared a regular cash dividend of $1.19 per share, payable on March 5, 2024 to shareholders of record as of February 20, 2024.

Other information

Critical accounting policies and estimates

Management's discussion and analysis of results of operations and financial condition are based on the Company's consolidated financial statements that have been prepared in accordance with accounting principles generally accepted in the U.S. (GAAP). The preparation of these financial statements requires that management make estimates and assumptions that affect the amounts reported for revenues, expenses, assets, liabilities and other related disclosures. Actual results may or may not differ from these estimates. The Company believes that the understanding of certain key accounting policies and estimates are essential in achieving more insight into the Company's operating results and financial condition. These key accounting policies include revenue recognition, income taxes, legal and self-insurance contingencies, valuation of long-lived assets, assumptions used to determine the amounts recorded for pensions and other employee benefit plans and accounting for stock based awards.

Revenue Recognition: The Company recognizes revenue from product sales when obligations under the terms of a contract with the customer are satisfied; generally, this occurs with the transfer of control of the goods to customers. The Company's global payment terms are typically between 30 to 90 days. Provisions for certain rebates, sales incentives, trade promotions, coupons, product returns, discounts to customers and governmental clawback provisions are accounted for as variable consideration and recorded as a reduction in sales.

Product discounts granted are based on the terms of arrangements with direct, indirect and other market participants, as well as market conditions, including consideration of competitor pricing. Rebates are estimated based on contractual terms, historical experience, patient outcomes, trend analysis and projected market conditions in the various markets served. The Company evaluates market conditions for products or groups of products primarily through the analysis of wholesaler and other third-party sell-through and market research data, as well as internally generated information.

Sales returns are estimated and recorded based on historical sales and returns information. Products that exhibit unusual sales or return patterns due to dating, competition or other marketing matters are specifically investigated and analyzed as part of the accounting for sales return accruals.

Sales returns allowances represent a reserve for products that may be returned due to expiration, destruction in the field, or in specific areas, product recall. The sales returns reserve is based on historical return trends by product and by market as a percent to gross sales. In accordance with the Company's accounting policies, the Company generally issues credit to customers for returned goods. The Company's sales returns reserves are accounted for in accordance with the U.S. GAAP guidance for revenue recognition when right of return exists. Sales returns reserves are recorded at full sales value. Sales returns in the Innovative Medicine segments are almost exclusively not resalable. Sales returns for certain franchises in the MedTech segment are typically resalable but are not material. The Company infrequently exchanges products from inventory for returned products. The sales returns reserve for the total Company has been less than 1.0% of annual net trade sales during the fiscal years 2023, 2022 and 2021.

Promotional programs, such as product listing allowances are recorded in the same period as related sales and include volume-based sales incentive programs. Volume-based incentive programs are based on the estimated sales volumes for the incentive period and are recorded as products are sold. These arrangements are evaluated to determine the appropriate amounts to be deferred or recorded as a reduction of revenue. The Company also earns profit-share payments through collaborative arrangements of certain products, which are included in sales to customers. Profit-share payments were less than 2.0% of the total revenues in fiscal year 2023 and less than 3.0% of the total revenues in fiscal year 2022 and 2021 are included in sales to customers.

In addition, the Company enters into collaboration arrangements that contain multiple revenue generating activities. Amounts due from collaborative partners for these arrangements are recognized as each activity is performed or delivered, based on the relative selling price. Upfront fees received as part of these arrangements are deferred and recognized over the performance period. See Note 1 to the Consolidated Financial Statements for additional disclosures on collaborations.

Reasonably likely changes to assumptions used to calculate the accruals for rebates, returns and promotions are not anticipated to have a material effect on the financial statements. The Company currently discloses the impact of changes to assumptions in the quarterly or annual filing in which there is a material financial statement impact.

Below are tables that show the progression of accrued rebates, returns, promotions, reserve for doubtful accounts and reserve for cash discounts by segment of business for the fiscal years ended December 31, 2023 and January 1, 2023.

Innovative Medicine segment

(Dollars in Millions)	Balance at Beginning of Period	Accruals	Payments/ Credits[2]	Balance at End of Period
2023				
Accrued rebates [1]	$12,289	47,523	(45,151)	14,661
Accrued returns	649	332	(347)	634
Accrued promotions	1	12	(7)	6
Subtotal	**$12,939**	**47,867**	**(45,505)**	**15,301**
Reserve for doubtful accounts	44	0	(11)	33
Reserve for cash discounts	110	1,386	(1,385)	111
Total	**$13,093**	**49,253**	**(46,901)**	**15,445**
2022				
Accrued rebates [1]	$10,331	43,026	(41,068)	12,289
Accrued returns	520	444	(315)	649
Accrued promotions	3	5	(7)	1
Subtotal	**$10,854**	**43,475**	**(41,390)**	**12,939**

Total	**$10,998**	**44,756**	**(42,661)**	**13,093**

(1) Includes reserve for customer rebates of $165 million at December 31, 2023 and $203 million at January 1, 2023, recorded as a contra asset.

(2) Includes prior period adjustments

MedTech segment

(Dollars in Millions)	Balance at Beginning of Period	Accruals	Payments/ Credits	Balance at End of Period
2023				
Accrued rebates[1]	$1,470	6,241	(6,256)	1,455
Accrued returns	134	555	(564)	125
Accrued promotions	43	74	(92)	25
Subtotal	**$1,647**	**6,870**	**(6,912)**	**1,605**
Reserve for doubtful accounts	125	33	(25)	133
Reserve for cash discounts	9	96	(100)	5
Total	**$1,781**	**6,999**	**(7,037)**	**1,743**
2022				
Accrued rebates[1]	$1,446	6,131	(6,107)	1,470
Accrued returns	134	531	(531)	134
Accrued promotions	54	102	(113)	43
Subtotal	**$1,634**	**6,764**	**(6,751)**	**1,647**
Reserve for doubtful accounts	148	6	(29)	125
Reserve for cash discounts	10	99	(100)	9
Total	**$1,792**	**6,869**	**(6,880)**	**1,781**

(1) Includes reserve for customer rebates of $740 million at December 31, 2023 and $802 million at January 1, 2023, recorded as a contra asset.

Income Taxes: Income taxes are recorded based on amounts refundable or payable for the current year and include the results of any difference between U.S. GAAP accounting and tax reporting, recorded as deferred tax assets or liabilities. The Company estimates deferred tax assets and liabilities based on enacted tax regulations and rates. Future changes in tax laws and rates may affect recorded deferred tax assets and liabilities.

The Company has unrecognized tax benefits for uncertain tax positions. The Company follows U.S. GAAP, which prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken in a tax return. Management believes that changes in these estimates would not have a material effect on the Company's results of operations, cash flows or financial position.

The Company has recorded deferred tax liabilities on all undistributed earnings prior to December 31, 2017 from its international subsidiaries. The Company has not provided deferred taxes on the undistributed earnings subsequent to January 1, 2018 from certain international subsidiaries where the earnings are considered to be indefinitely reinvested. The Company intends to continue to reinvest these earnings in those international operations. If the Company decides at a later date to repatriate these earnings to the U.S., the Company would be required to provide for the net tax effects on these amounts. The Company estimates that the tax effect of this repatriation would be approximately $0.5 billion under currently enacted tax laws and regulations and at current currency exchange rates. This amount does not include the possible benefit of U.S. foreign tax credits, which may substantially offset this cost.

See Note 1 and Note 8 to the Consolidated Financial Statements for further information regarding income taxes.

Legal and Self Insurance Contingencies: The Company records accruals for various contingencies, including legal proceedings and product liability claims as these arise in the normal course of business. The accruals are based on management's judgment as to the probability of losses and, where applicable, actuarially determined estimates. The Company has self insurance through a wholly-owned captive insurance company. In addition to accruals in the self insurance program, claims that exceed the insurance coverage are accrued when losses are probable and amounts can be reasonably estimated.

The Company follows the provisions of U.S. GAAP when recording litigation related contingencies. A liability is recorded when a loss is probable and can be reasonably estimated.

See Notes 1 and 19 to the Consolidated Financial Statements for further information regarding product liability and legal proceedings.

Long-Lived and Intangible Assets: The Company assesses changes, both qualitatively and quantitatively, in economic conditions and makes assumptions regarding estimated future cash flows in evaluating the value of the Company's property, plant and equipment, goodwill and intangible assets. As these assumptions and estimates may change over time, it may or may not be necessary for the Company to record impairment charges.

Employee Benefit Plans: The Company sponsors various retirement and pension plans, including defined benefit, defined contribution and termination indemnity plans, which cover most employees worldwide. These plans are based on assumptions for the discount rate, expected return on plan assets, mortality rates, expected salary increases, healthcare cost trend rates and attrition rates. See Note 10 to the Consolidated Financial Statements for further details on these rates.

Stock Based Compensation: The Company recognizes compensation expense associated with the issuance of equity instruments to employees for their services. Based on the type of equity instrument, the fair value is estimated on the date of grant using either the Black-Scholes option valuation model or a combination of both the Black-Scholes option valuation model and Monte Carlo valuation model, and is expensed in the financial statements over the service period. The input assumptions used in determining fair value are the expected life, expected volatility, risk-free rate and expected dividend yield. For performance share units, the fair market value is calculated for the two component goals at the date of grant: adjusted operational earnings per share and relative total shareholder return. The fair values for the earnings per share goal of each performance share unit was estimated on the date of grant using the fair market value of the shares at the time of the award, discounted for dividends, which are not paid on the performance share units during the vesting period. The fair value for the relative total shareholder return goal of each performance share unit was estimated on the date of grant using the Monte Carlo valuation model. See Note 16 to the Consolidated Financial Statements for additional information.

New accounting pronouncements

Refer to Note 1 to the Consolidated Financial Statements for recently adopted accounting pronouncements and recently issued accounting pronouncements not yet adopted as of December 31, 2023.

Economic and market factors

The Company is aware that its products are used in an environment where, for more than a decade, policymakers, consumers and businesses have expressed concerns about the rising cost of healthcare. In response to these concerns, the Company has a long-standing policy of pricing products responsibly. For the period 2013 - 2023, in the U.S., the weighted average compound annual growth rate of the Company's net price increases for healthcare products (prescription and over-the-counter drugs, hospital and professional products) was below the U.S. Consumer Price Index (CPI).

The Company operates in certain countries where the economic conditions continue to present significant challenges. The Company continues to monitor these situations and take appropriate actions. Inflation rates continue to have an effect on worldwide economies and, consequently, on the way companies operate. The Company has accounted for operations in Argentina, Venezuela and Turkey (beginning in the fiscal second quarter of 2022) as highly inflationary, as the prior three-year cumulative inflation rate surpassed 100%. This did not have a material impact to the Company's results in the period. In the face of increasing costs, the Company strives to maintain its profit margins through cost reduction programs, productivity improvements and periodic price increases.

In December 2023, the Argentine government devalued the peso by approximately 50%. During 2023, the Company recorded a charge of approximately $130 million related to operations in Argentina due to the application of highly inflationary accounting. As of December 31, 2023, the Company's Argentine subsidiaries represented less than 1.0% of the Company's consolidated assets, liabilities, revenues and profits from continuing operations; therefore, the effect of a change in the exchange rate is not expected to have a material adverse effect on the Company's 2024 full-year results.

In July 2023, Janssen Pharmaceuticals, Inc. (Janssen) filed litigation against the U.S. Department of Health and Human Services as well as the Centers for Medicare and Medicaid Services challenging the constitutionality of the Inflation Reduction Act's (IRA) Medicare Drug Price Negotiation Program. The litigation requests a declaration that the IRA violates Janssen's rights under the First Amendment and the Fifth Amendment to the Constitution and therefore that Janssen is not subject to the IRA's mandatory pricing scheme.

Russia-Ukraine War

Although the long-term implications of Russia's invasion of Ukraine are difficult to predict at this time, the financial impact of the conflict in the fiscal year 2023, including accounts receivable or inventory reserves, was not material. As of and for each of the fiscal years ending December 31, 2023 and January 1, 2023, the business of the Company's Russian subsidiaries represented less than 1% of the Company's consolidated assets and represented 1% of revenues. The Company does not maintain Ukraine subsidiaries subsequent to the Kenvue separation.

In early March of 2022, the Company took steps to suspend all advertising, enrollment in clinical trials, and any additional investment in Russia. The Company continues to supply products relied upon by patients for healthcare purposes.

Conflict in the Middle East

Although the long-term implications of Israel's conflict are difficult to predict at this time, the financial impact of the conflict in the fiscal year 2023, including accounts receivable or inventory reserves, was not material. As of and for the fiscal year ending December 31, 2023, the business of the Company's Israel subsidiaries represented 1% of the Company's consolidated assets and represented less than 1% of revenues.

The Company is exposed to fluctuations in currency exchange rates. A 1% change in the value of the U.S. Dollar as compared to all foreign currencies in which the Company had sales, income or expense in 2023 would have increased or decreased the translation of foreign sales by approximately $0.4 billion and net income by approximately $0.2 billion.

Governments around the world consider various proposals to make changes to tax laws, which may include increasing or decreasing existing statutory tax rates. In connection with various government initiatives, companies are required to disclose more information to tax authorities on operations around the world, which may lead to greater audit scrutiny of profits earned in other countries. A change in statutory tax rate in any country would result in the revaluation of the Company's deferred tax assets and liabilities related to that particular jurisdiction in the period in which the new tax law is enacted. This change would result in an expense or benefit recorded to the Company's Consolidated Statement of Earnings. The Company closely monitors these proposals as they arise in the countries where it operates. Changes to the statutory tax rate may occur at any time, and any related expense or benefit recorded may be material to the fiscal quarter and year in which the law change is enacted.

The Company faces various worldwide healthcare changes that may continue to result in pricing pressures that include healthcare cost containment and government legislation relating to sales, promotions, pricing and reimbursement of healthcare products.

Changes in the behavior and spending patterns of purchasers of healthcare products and services, including delaying medical procedures, rationing prescription medications, reducing the frequency of physician visits and foregoing healthcare insurance coverage may continue to impact the Company's businesses.

The Company also operates in an environment increasingly hostile to intellectual property rights. Firms have filed Abbreviated New Drug Applications or Biosimilar Biological Product Applications with the U.S. FDA or otherwise challenged the coverage and/or validity of the Company's patents, seeking to market generic or biosimilar forms of many of the Company's key pharmaceutical products prior to expiration of the applicable patents covering those products. In the event the Company is not successful in defending the patent claims challenged in the resulting lawsuits, generic or biosimilar versions of the products at issue will be introduced to the market, resulting in the potential for substantial market share and revenue losses for those products, and which may result in a non-cash impairment charge in any associated intangible asset. There is also a risk that one or more competitors could launch a generic or biosimilar version of the product at issue following regulatory approval even though one or more valid patents are in place.

Legal proceedings

Johnson & Johnson and certain of its subsidiaries are involved in various lawsuits and claims regarding product liability, intellectual property, commercial, employment, indemnification and other matters; governmental investigations; and other legal proceedings that arise from time to time in the ordinary course of business.

The Company records accruals for loss contingencies associated with these legal matters when it is probable that a liability will be incurred and the amount of the loss can be reasonably estimated. As of December 31, 2023, the Company has determined that the liabilities associated with certain litigation matters are probable and can be reasonably estimated. The Company has accrued for these matters and will continue to monitor each related legal issue and adjust accruals as might be warranted based on new information and further developments in accordance with ASC 450-20-25, Contingencies. For these and other litigation and regulatory matters discussed below for which a loss is probable or reasonably possible, the Company is unable to estimate the possible loss or range of loss beyond the amounts accrued. Amounts accrued for legal contingencies often result from a complex series of judgments about future events and uncertainties that rely heavily on estimates and assumptions including timing of related payments. The ability to make such estimates and judgments can be affected by various factors including, among other things, whether damages sought in the proceedings are unsubstantiated or indeterminate; scientific and legal discovery has not commenced or is not complete; proceedings are in early stages; matters present legal uncertainties; there are significant facts in dispute; procedural or jurisdictional issues; the uncertainty and unpredictability of the number of potential claims; ability to achieve comprehensive multi-party settlements; complexity of related cross-claims and counterclaims; and/or there are numerous parties involved. To the extent adverse awards, judgments or verdicts have been rendered against the Company, the Company does not record an accrual until a loss is determined to be probable and can be reasonably estimated.

In the Company's opinion, based on its examination of these matters, its experience to date and discussions with counsel, the ultimate outcome of legal proceedings, net of liabilities accrued in the Company's balance sheet, is not expected to have a material adverse effect on the Company's financial position. However, the resolution of, or increase in accruals for, one or more of these matters in any reporting period may have a material adverse effect on the Company's results of operations and cash flows for that period.

See Note 19 to the Consolidated Financial Statements included in Item 8 of this report for further information regarding legal proceedings.

Common stock

The Company's Common Stock is listed on the New York Stock Exchange under the symbol JNJ. As of February 9, 2024, there were 118,772 record holders of Common Stock of the Company.

Item 7A. Quantitative and qualitative disclosures about market risk

The information called for by this item is incorporated herein by reference to Item 7. Management's discussion and analysis of results of operations and financial condition - Liquidity and capital resources - Financing and market risk of this Report; and Note 1 Summary of significant accounting policies - Financial instruments of the Notes to Consolidated Financial Statements included in Item 8 of this Report.

Notes to Consolidated Financial Statements

1. Summary of significant accounting policies

Principles of consolidation

The consolidated financial statements include the accounts of Johnson & Johnson and its subsidiaries (the Company). Intercompany accounts and transactions are eliminated. Columns and rows within tables may not add due to rounding. Percentages have been calculated using actual, non-rounded figures.

Description of the company and business segments

The Company has approximately 131,900 employees worldwide engaged in the research and development, manufacture and sale of a broad range of products in the healthcare field. The Company conducts business in virtually all countries of the world and its primary focus is on products related to human health and well-being.

Kenvue IPO/separation and discontinued operations

On May 8, 2023, Kenvue, completed an initial public offering (the IPO) resulting in the issuance of 198,734,444 shares of its common stock, par value $0.01 per share (the "Kenvue Common Stock"), at an initial public offering of $22.00 per share for net proceeds of $4.2 billion. The excess of the net proceeds from the IPO over the net book value of the Johnson & Johnson divested interest was $2.5 billion and was recorded to additional paid-in capital. As of the closing of the IPO, Johnson & Johnson owned approximately 89.6% of the total outstanding shares of Kenvue Common Stock and at July 2, 2023, the non-controlling interest of $1.3 billion associated with Kenvue was reflected in equity attributable to non-controlling interests in the consolidated balance sheet in the fiscal second quarter of 2023.

On August 23, 2023, Johnson & Johnson completed the disposition of an additional 80.1% ownership of the shares of Kenvue through an exchange offer. Following the exchange offer, the Company owns 9.5% of the shares of Kenvue which are accounted for as an equity investment carried at fair value within continuing operations. The historical results of the Consumer Health business (which previously represented the Consumer Health business segment) are reflected as discontinued operations in the Company's Consolidated Financial Statements through the date of the exchange offer (see Note 21 for additional details). Unless otherwise indicated, the information in the notes to the Consolidated Financial Statements refer only to Johnson & Johnson's continuing operations.

Business segments

Following the completion of the exchange offer, the Company is organized into two business segments: Innovative Medicine and MedTech. The Innovative Medicine segment is focused on the following therapeutic areas, including Immunology, Infectious diseases, Neuroscience, Oncology, Pulmonary Hypertension, and Cardiovascular and Metabolic diseases. Products in this segment are distributed directly to retailers, wholesalers, distributors, hospitals and healthcare professionals for prescription use. The MedTech segment includes a broad portfolio of products used in the Orthopaedic, Surgery, Interventional Solutions and Vision fields. These products are distributed to wholesalers, hospitals and retailers, and used principally in the professional fields by physicians, nurses, hospitals, eye care professionals and clinics.

New accounting standards

Recently adopted accounting standards

ASU 2022-04: Liabilities-Supplier Finance Programs (Topic 405-50) – Disclosure of Supplier Finance Program Obligations

The Company adopted the standard as of the beginning of fiscal year 2023, which requires that a buyer in a supplier finance program disclose additional information about the program for financial statement users.

The Company has agreements for supplier finance programs with third-party financial institutions. These programs provide participating suppliers the ability to finance payment obligations from the Company with the third-party financial institutions. The Company is not a party to the arrangements between the suppliers and the third-party financial institutions. The Company's obligations to its suppliers, including amounts due, and scheduled payment dates (which have general payment terms of 90 days), are not affected by a participating supplier's decision to participate in the program.

As of both December 31, 2023, and January 1, 2023, $0.7 billion were valid obligations under the program. The obligations are presented as Accounts payable on the Consolidated Balance Sheets.

Recently issued accounting standards

Not adopted as of December 31, 2023

ASU 2023-07: Segment Reporting (Topic 280) – Improvements to Reportable Segment Disclosures
This update requires expanded annual and interim disclosures for significant segment expenses that are regularly provided to the chief operating decision maker and included within each reported measure of segment profit or loss. This update will be effective for fiscal years beginning after December 15, 2023, and is to be applied retrospectively to all periods presented in the financial statements. Early adoption is permitted. As this accounting standard only impacts disclosures, it will not have a material impact on the Company's Consolidated Financial Statements.

ASU 2023-09: Income Taxes (Topic 740) - Improvements to Income Tax Disclosures
This update standardizes categories for the effective tax rate reconciliation, requires disaggregation of income taxes and additional income tax-related disclosures. This update is required to be effective for the Company for fiscal periods beginning after December 15, 2024. As this accounting standard only impacts disclosures, it will not have a material impact on the Company's Consolidated Financial Statements.

Cash equivalents

The Company classifies all highly liquid investments with stated maturities of three months or less from date of purchase as cash equivalents and all highly liquid investments with stated maturities of greater than three months from the date of purchase as current marketable securities. The Company has a policy of making investments only with commercial institutions that have at least an investment grade credit rating. The Company invests its cash primarily in government securities and obligations, corporate debt securities, money market funds and reverse repurchase agreements (RRAs).

RRAs are collateralized by deposits in the form of Government Securities and Obligations for an amount not less than 102% of their value. The Company does not record an asset or liability as the Company is not permitted to sell or repledge the associated collateral. The Company has a policy that the collateral has at least an A (or equivalent) credit rating. The Company utilizes a third party custodian to manage the exchange of funds and ensure that collateral received is maintained at 102% of the value of the RRAs on a daily basis. RRAs with stated maturities of greater than three months from the date of purchase are classified as marketable securities.

Investments

Investments classified as held to maturity investments are reported at amortized cost and realized gains or losses are reported in earnings. Investments classified as available-for-sale debt securities are carried at estimated fair value with unrealized gains and losses recorded as a component of accumulated other comprehensive income. Available-for-sale securities available for current operations are classified as current assets; otherwise, they are classified as long term. Management determines the appropriate classification of its investment in debt and equity securities at the time of purchase and re-evaluates such determination at each balance sheet date. The Company reviews its investments for impairment and adjusts these investments to fair value through earnings, as required.

Property, plant and equipment and depreciation

Property, plant and equipment are stated at cost. The Company utilizes the straight-line method of depreciation over the estimated useful lives of the assets:

Building and building equipment	30 years
Land and leasehold improvements	10 - 20 years
Machinery and equipment	2 - 13 years

The Company capitalizes certain computer software and development costs, included in machinery and equipment, when incurred in connection with developing or obtaining computer software for internal use. Capitalized software costs are amortized over the estimated useful lives of the software, which generally range from 3 to 8 years.

The Company reviews long-lived assets to assess recoverability using undiscounted cash flows. When certain events or changes in operating or economic conditions occur, an impairment assessment may be performed on the recoverability of the

carrying value of these assets. If the asset is determined to be impaired, the loss is measured based on the difference between the asset's fair value and its carrying value. If quoted market prices are not available, the Company will estimate fair value using a discounted value of estimated future cash flows.

Revenue recognition

The Company recognizes revenue from product sales when obligations under the terms of a contract with the customer are satisfied; generally, this occurs with the transfer of control of the goods to customers. The Company's global payment terms are typically between 30 to 90 days. Provisions for certain rebates, sales incentives, trade promotions, coupons, product returns, discounts to customers and governmental clawback provisions are accounted for as variable consideration and recorded as a reduction in sales. The liability is recognized within Accrued rebates, returns, and promotions on the consolidated balance sheet.

Product discounts granted are based on the terms of arrangements with direct, indirect and other market participants, as well as market conditions, including consideration of competitor pricing. Rebates are estimated based on contractual terms, historical experience, patient outcomes, trend analysis and projected market conditions in the various markets served. A significant portion of the liability related to rebates is from the sale of the Company's pharmaceutical products within the U.S., primarily the Managed Care, Medicare and Medicaid programs, which amounted to $11.5 billion and $9.6 billion as of December 31, 2023 and January 1, 2023, respectively. The Company evaluates market conditions for products or groups of products primarily through the analysis of wholesaler and other third-party sell-through and market research data, as well as internally generated information.

Sales returns are estimated and recorded based on historical sales and returns information. Products that exhibit unusual sales or return patterns due to dating, competition or other marketing matters are specifically investigated and analyzed as part of the accounting for sales return accruals.

Sales returns allowances represent a reserve for products that may be returned due to expiration, destruction in the field, or in specific areas, product recall. The sales returns reserve is based on historical return trends by product and by market as a percent to gross sales. In accordance with the Company's accounting policies, the Company generally issues credit to customers for returned goods. The Company's sales returns reserves are accounted for in accordance with the U.S. GAAP guidance for revenue recognition when right of return exists. Sales returns reserves are recorded at full sales value. Sales returns in the Innovative Medicine segments are almost exclusively not resalable. Sales returns for certain franchises in the MedTech segment are typically resalable but are not material. The Company infrequently exchanges products from inventory for returned products. The sales returns reserve for the total Company has been less than 1.0% of annual net trade sales during each of the fiscal years 2023, 2022 and 2021.

Promotional programs, such as product listing allowances are recorded in the same period as related sales and include volume-based sales incentive programs. Volume-based incentive programs are based on the estimated sales volumes for the incentive period and are recorded as products are sold. These arrangements are evaluated to determine the appropriate amounts to be deferred or recorded as a reduction of revenue. The Company also earns profit-share payments through collaborative arrangements of certain products, which are included in sales to customers. Profit-share payments were less than 2.0% of the total revenues in fiscal year 2023 and less than 3.0% of the total revenues in the fiscal years 2022 and 2021 and are included in sales to customers.

See Note 17 to the Consolidated Financial Statements for further disaggregation of revenue.

Shipping and handling

Shipping and handling costs incurred were $0.9 billion, $0.8 billion and $0.8 billion in fiscal years 2023, 2022 and 2021, respectively, and are included in selling, marketing and administrative expense. The amount of revenue received for shipping and handling is less than 1.0% of sales to customers for all periods presented.

Inventories

Inventories are stated at the lower of cost or net realizable value determined by the first-in, first-out method.

Intangible assets and goodwill

The authoritative literature on U.S. GAAP requires that goodwill and intangible assets with indefinite lives be assessed annually for impairment. The Company completed its annual impairment test for 2023 in the fiscal fourth quarter. Future impairment

tests will be performed annually in the fiscal fourth quarter, or sooner if warranted. Purchased in-process research and development is accounted for as an indefinite lived intangible asset until the underlying project is completed, at which point the intangible asset will be accounted for as a definite lived intangible asset. If warranted the purchased in-process research and development could be written off or partially impaired depending on the underlying program.

Intangible assets that have finite useful lives continue to be amortized over their useful lives, and are reviewed for impairment when warranted by economic conditions. See Note 5 for further details on Intangible Assets and Goodwill.

Financial instruments

As required by U.S. GAAP, all derivative instruments are recorded on the balance sheet at fair value. Fair value is the exit price that would be received to sell an asset or paid to transfer a liability. Fair value is a market-based measurement determined using assumptions that market participants would use in pricing an asset or liability. The authoritative literature establishes a three-level hierarchy to prioritize the inputs used in measuring fair value, with Level 1 having the highest priority and Level 3 having the lowest. Changes in the fair value of derivatives are recorded each period in current earnings or other comprehensive income, depending on whether the derivative is designated as part of a hedge transaction, and if so, the type of hedge transaction.

The Company documents all relationships between hedged items and derivatives. The overall risk management strategy includes reasons for undertaking hedge transactions and entering into derivatives. The objectives of this strategy are: (1) minimize foreign currency exposure's impact on the Company's financial performance; (2) protect the Company's cash flow from adverse movements in foreign exchange rates; (3) ensure the appropriateness of financial instruments; and (4) manage the enterprise risk associated with financial institutions. See Note 6 for additional information on Financial Instruments.

Leases

The Company determines whether an arrangement is a lease at contract inception by establishing if the contract conveys the right to control the use of identified property, plant, or equipment for a period of time in exchange for consideration. Right of Use (ROU) Assets and Lease Liabilities for operating leases are included in Other assets, Accrued liabilities, and Other liabilities on the consolidated balance sheet. The ROU Assets represent the right to use an underlying asset for the lease term and lease liabilities represent an obligation to make lease payments arising from the lease. Commitments under finance leases are not significant, and are included in Property, plant and equipment, Loans and notes payable, and Long-term debt on the consolidated balance sheet.

ROU Assets and Lease Liabilities are recognized at the lease commencement date based on the present value of all minimum lease payments over the lease term. The Company uses its incremental borrowing rate based on the information available at commencement date in determining the present value of lease payments, when the implicit rate is not readily determinable. Lease terms may include options to extend or terminate the lease. These options are included in the lease term when it is reasonably certain that the Company will exercise that option. Operating lease expense is recognized on a straight-line basis over the lease term. The Company has elected the following policy elections on adoption: use of portfolio approach on leases of assets under master service agreements, exclusion of short term leases on the balance sheet, and not separating lease and non-lease components.

The Company primarily has operating lease for space, vehicles, manufacturing equipment and data processing equipment. The ROU asset pertaining to leases from continuing operation was $1.0 billion in both fiscal years 2023 and 2022. The lease liability from continuing operations was $1.1 billion in both fiscal years 2023 and 2022. The operating lease costs from continuing operations were $0.2 billion in fiscal years 2023, 2022 and 2021. Cash paid for amounts included in the measurement of lease liabilities from continuing operations were $0.2 billion in fiscal years 2023, 2022 and 2021.

Product liability

Accruals for product liability claims are recorded, on an undiscounted basis, when it is probable that a liability has been incurred and the amount of the liability can be reasonably estimated based on existing information and actuarially determined estimates where applicable. The accruals are adjusted periodically as additional information becomes available. The Company accrues an estimate of the legal defense costs needed to defend each matter when those costs are probable and can be reasonably estimated. To the extent adverse verdicts have been rendered against the Company, the Company does not record an accrual until a loss is determined to be probable and can be reasonably estimated.

The Company has self insurance through a wholly-owned captive insurance company. In addition to accruals in the self insurance program, claims that exceed the insurance coverage are accrued when losses are probable and amounts can be reasonably estimated.

Research and development

Research and development expenses are expensed as incurred in accordance with ASC 730, Research and Development. Upfront and milestone payments made to third parties in connection with research and development collaborations are expensed as incurred up to the point of regulatory approval. Payments made to third parties subsequent to regulatory approval are capitalized and amortized over the remaining useful life of the related product. Amounts capitalized for such payments are included in other intangibles, net of accumulated amortization.

The Company enters into collaborative arrangements, typically with other pharmaceutical or biotechnology companies, to develop and commercialize drug candidates or intellectual property. These arrangements typically involve two (or more) parties who are active participants in the collaboration and are exposed to significant risks and rewards dependent on the commercial success of the activities. These collaborations usually involve various activities by one or more parties, including research and development, marketing and selling and distribution. Often, these collaborations require upfront, milestone and royalty or profit share payments, contingent upon the occurrence of certain future events linked to the success of the asset in development. Amounts due from collaborative partners related to development activities are generally reflected as a reduction of research and development expense because the performance of contract development services is not central to the Company's operations. In general, the income statement presentation for these collaborations is as follows:

Nature/Type of Collaboration	Statement of Earnings Presentation
Third-party sale of product & profit share payments received	Sales to customers
Royalties/milestones paid to collaborative partner (post-regulatory approval)*	Cost of products sold
Royalties received from collaborative partner	Other income (expense), net
Upfront payments & milestones paid to collaborative partner (pre-regulatory approval)	Research and development expense
Research and development payments to collaborative partner	Research and development expense
Research and development payments received from collaborative partner or government entity	Reduction of Research and development expense

* Milestones are capitalized as intangible assets and amortized to cost of products sold over the useful life.

For all years presented, there was no individual project that represented greater than 5% of the total annual consolidated research and development expense.

The Company has a number of products and compounds developed in collaboration with strategic partners including XARELTO, co-developed with Bayer HealthCare AG and IMBRUVICA, developed in collaboration and co-marketed with Pharmacyclics LLC, an AbbVie company.

Separately, the Company has a number of licensing arrangements for products and compounds including DARZALEX, licensed from Genmab A/S.

Advertising

Costs associated with advertising are expensed in the year incurred and are included in selling, marketing and administrative expenses. Advertising expenses worldwide, which comprised television, radio, print media and Internet advertising, were $0.5 billion, $0.7 billion and $1.2 billion in fiscal years 2023, 2022 and 2021, respectively.

Income taxes

Income taxes are recorded based on amounts refundable or payable for the current year and include the results of any difference between U.S. GAAP accounting and tax reporting, recorded as deferred tax assets or liabilities. The Company

estimates deferred tax assets and liabilities based on enacted tax regulations and rates. Future changes in tax laws and rates may affect recorded deferred tax assets and liabilities in the future.

The Company has unrecognized tax benefits for uncertain tax positions. The Company follows U.S. GAAP which prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken in a tax return. Management believes that changes in these estimates would not have a material effect on the Company's results of operations, cash flows or financial position.

In 2017, the United States enacted into law new U.S. tax legislation, the U.S. Tax Cuts and Jobs Act (TCJA). This law included provisions for a comprehensive overhaul of the corporate income tax code, including a reduction of the statutory corporate tax rate from 35% to 21%, effective on January 1, 2018. The TCJA included a provision for a tax on all previously undistributed earnings of U.S. companies located in foreign jurisdictions. Undistributed earnings in the form of cash and cash equivalents were taxed at a rate of 15.5% and all other earnings were taxed at a rate of 8.0%. This tax is payable over 8 years and will not accrue interest. These payments began in 2018 and will continue through 2025. The remaining balance at the end of the 2023 was approximately $4.5 billion, of which $2.5 billion is classified as noncurrent and reflected as “Long-term taxes payable” on the Company’s balance sheet.

The TCJA also includes provisions for a tax on global intangible low-taxed income (GILTI). GILTI is described as the excess of a U.S. shareholder’s total net foreign income over a deemed return on tangible assets, as provided by the TCJA. In January 2018, the FASB issued guidance that allows companies to elect as an accounting policy whether to record the tax effects of GILTI in the period the tax liability is generated (i.e., “period cost”) or provide for deferred tax assets and liabilities related to basis differences that exist and are expected to effect the amount of GILTI inclusion in future years upon reversal (i.e., “deferred method”). The Company has elected to account for GILTI under the deferred method. The deferred tax amounts recorded are based on the evaluation of temporary differences that are expected to reverse as GILTI is incurred in future periods.

The Company has recorded deferred tax liabilities on all undistributed earnings prior to December 31, 2017 from its international subsidiaries. The Company has not provided deferred taxes on the undistributed earnings subsequent to January 1, 2018 from certain international subsidiaries where the earnings are considered to be indefinitely reinvested. The Company intends to continue to reinvest these earnings in those international operations. If the Company decides at a later date to repatriate these earnings to the U.S., the Company would be required to provide for the net tax effects on these amounts. The Company estimates that the tax effect of this repatriation would be approximately $0.5 billion under currently enacted tax laws and regulations and at current currency exchange rates. This amount does not include the possible benefit of U.S. foreign tax credits, which may substantially offset this cost.

See Note 8 to the Consolidated Financial Statements for further information regarding income taxes.

Net earnings per share

Basic earnings per share is computed by dividing net earnings available to common shareholders by the weighted average number of common shares outstanding for the period. Diluted earnings per share reflects the potential dilution that could occur if securities were exercised or converted into common stock using the treasury stock method.

Use of estimates

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the U.S. requires management to make estimates and assumptions that affect the amounts reported. Estimates are used when accounting for sales discounts, rebates, allowances and incentives, product liabilities, income taxes, withholding taxes, depreciation, amortization, employee benefits, contingencies and intangible asset and liability valuations. Actual results may or may not differ from those estimates.

The Company follows the provisions of U.S. GAAP when recording litigation related contingencies. A liability is recorded when a loss is probable and can be reasonably estimated. The best estimate of a loss within a range is accrued; however, if no estimate in the range is better than any other, the minimum amount is accrued.

Annual closing date

The Company follows the concept of a fiscal year, which ends on the Sunday nearest to the end of the month of December. Normally each fiscal year consists of 52 weeks, but every five or six years the fiscal year consists of 53 weeks, and therefore includes additional shipping days, as was the case in fiscal year 2020, and will be the case again in fiscal year 2026.

2. Cash, cash equivalents and current marketable securities

At the end of the fiscal year 2023 and 2022, cash, cash equivalents and current marketable securities comprised:

	2023				
(Dollars in Millions)	Carrying Amount	Unrecognized Loss	Estimated Fair Value	Cash & Cash Equivalents	Current Marketable Securities
Cash	$3,340	—	3,340	3,340	—
Non-U.S. Sovereign Securities[1]	522	—	522	174	348
U.S. Reverse repurchase agreements	4,377	—	4,377	4,377	—
Corporate debt securities[1]	338	—	338	189	149
Money market funds	4,814	—	4,814	4,814	—
Time deposits[1]	662	—	662	662	—
Subtotal	**$14,053**	**—**	**14,053**	**13,556**	**497**
U.S. Gov't Securities	$8,562	—	8,562	8,259	303
U.S. Gov't Agencies	71	(1)	70	—	70
Other Sovereign Securities	5	—	5	1	4
Corporate and other debt securities	237	—	237	43	194
Subtotal available for sale[2]	**$8,875**	**(1)**	**8,874**	**8,303**	**571**
Total cash, cash equivalents and current marketable securities				**$21,859**	**1,068**

	2022				
(Dollars in Millions)	Carrying Amount	Unrecognized Loss	Estimated Fair Value	Cash & Cash Equivalents	Current Marketable Securities
Cash	$3,691	—	3,691	3,691	—
U.S. Reverse repurchase agreements	1,419	—	1,419	1,419	—
Corporate debt securities[1]	873	(1)	872	—	873
Money market funds	5,368	—	5,368	5,368	—
Time deposits[1]	443	—	443	443	—
Subtotal	**11,794**	**(1)**	**11,793**	**10,921**	**873**
U.S. Gov't Securities	$9,959	(28)	9,931	1,922	8,009
U.S. Gov't Agencies	210	(5)	205	—	205
Corporate and other debt securities	352	(1)	351	46	305
Subtotal available for sale[2]	**$10,521**	**(34)**	**10,487**	**1,968**	**8,519**
Total cash, cash equivalents and current marketable securities				**$12,889**	**9,392**

(1) Held to maturity investments are reported at amortized cost and realized gains or losses are reported in earnings.

(2) Available for sale debt securities are reported at fair value with unrealized gains and losses reported net of taxes in other comprehensive income.

Fair value of government securities and obligations and corporate debt securities were estimated using quoted broker prices and significant other observable inputs.

The contractual maturities of the available for sale debt securities at December 31, 2023 are as follows:

(Dollars in Millions)	Cost Basis	Fair Value
Due within one year	$8,865	8,864
Due after one year through five years	10	10
Due after five years through ten years	—	—
Total debt securities	**$8,875**	**8,874**

The Company invests its excess cash in both deposits with major banks throughout the world and other high-quality money market instruments. The Company has a policy of making investments only with commercial institutions that have at least an investment grade credit rating.

3. Inventories

At the end of fiscal years 2023 and 2022, inventories comprised:

(Dollars in Millions)	2023	2022
Raw materials and supplies	$2,355	1,719
Goods in process	1,952	1,577
Finished goods	6,874	6,972
Total inventories	**$11,181**	**10,268**

4. Property, plant and equipment

At the end of fiscal years 2023 and 2022, property, plant and equipment at cost and accumulated depreciation were:

(Dollars in Millions)	2023	2022
Land and land improvements	$795	784
Buildings and building equipment	12,375	11,470
Machinery and equipment	28,979	26,603
Construction in progress	5,627	4,677
Total property, plant and equipment, gross	**$47,776**	**43,534**
Less accumulated depreciation	27,878	25,552
Total property, plant and equipment, net	**$19,898**	**17,982**

The Company capitalizes interest expense as part of the cost of construction of facilities and equipment. Interest expense capitalized in fiscal years 2023, 2022 and 2021 was $70 million, $49 million and $49 million, respectively.

Depreciation expense, including the amortization of capitalized interest in fiscal years 2023, 2022 and 2021 was $2.6 billion, $2.4 billion and $2.4 billion, respectively.

Upon retirement or other disposal of property, plant and equipment, the costs and related amounts of accumulated depreciation or amortization are eliminated from the asset and accumulated depreciation accounts, respectively. The difference, if any, between the net asset value and the proceeds are recorded in earnings.

5. Intangible assets and goodwill

At the end of fiscal years 2023 and 2022, the gross and net amounts of intangible assets were:

(Dollars in Millions)	2023	2022
Intangible assets with definite lives:		
Patents and trademarks — gross	$40,417	39,388
Less accumulated amortization	(24,808)	(20,616)
Patents and trademarks — net	**$15,609**	**18,772**
Customer relationships and other intangibles — gross	$20,322	19,764
Less accumulated amortization	(12,685)	(11,363)
Customer relationships and other intangibles — net[1]	**$7,637**	**8,401**
Intangible assets with indefinite lives:		
Trademarks	$1,714	1,630
Purchased in-process research and development	9,215	9,686
Total intangible assets with indefinite lives	**$10,929**	**11,316**
Total intangible assets — net	**$34,175**	**38,489**

[1] The majority is comprised of customer relationships

Goodwill as of December 31, 2023 and January 1, 2023, as allocated by segment of business, was as follows:

(Dollars in Millions)	Innovative Medicine	MedTech	Total
Goodwill at January 2, 2022	$10,580	14,856	25,436
Goodwill, related to acquisitions	—	11,056	11,056
Goodwill, related to divestitures	—	—	—
Currency translation/other	(396)	(49)	(445)
Goodwill at January 1, 2023	10,184	25,863	36,047
Goodwill, related to acquisitions	—	—	—
Goodwill, related to divestitures	—	—	—
Currency translation/other	223	288 *	511
Goodwill at December 31, 2023	$10,407	26,151	36,558

*Includes purchase price allocation adjustments for Abiomed

The weighted average amortization period for patents and trademarks is approximately 11 years. The weighted average amortization period for customer relationships and other intangible assets is approximately 19 years. The amortization expense of amortizable assets included in Cost of products sold was $4.5 billion, $3.9 billion and $4.2 billion before tax, for the fiscal years ended December 31, 2023, January 1, 2023 and January 2, 2022, respectively. Intangible asset write-downs are included in Other (income) expense, net.

The estimated amortization expense related to intangible assets for approved products, before tax, for the five succeeding years is approximately:

(Dollars in Millions)				
2024	2025	2026	2027	2028
$4,300	3,500	2,900	2,300	1,600

See Note 18 to the Consolidated Financial Statements for additional details related to acquisitions and divestitures.

6. Fair value measurements

The Company uses forward foreign exchange contracts to manage its exposure to the variability of cash flows, primarily related to the foreign exchange rate changes of future intercompany products and third-party purchases of materials denominated in a foreign currency. The Company uses cross currency interest rate swaps to manage currency risk primarily related to borrowings. Both types of derivatives are designated as cash flow hedges.

Additionally, the Company primarily uses interest rate swaps as an instrument to manage interest rate risk related to fixed rate borrowings. These derivatives are designated as fair value hedges. The Company uses cross currency interest rate swaps and forward foreign exchange contracts designated as net investment hedges. Additionally, the Company uses forward foreign exchange contracts to offset its exposure to certain foreign currency assets and liabilities. These forward foreign exchange contracts are not designated as hedges and therefore, changes in the fair values of these derivatives are recognized in earnings, thereby offsetting the current earnings effect of the related foreign currency assets and liabilities.

The Company does not enter into derivative financial instruments for trading or speculative purposes, or that contain credit risk related contingent features. The Company maintains credit support agreements (CSA) with certain derivative counterparties establishing collateral thresholds based on respective credit ratings and netting agreements. As of December 31, 2023 and January 1, 2023, the total amount of cash collateral paid by the Company under the CSA amounted to $4.0 billion and $0.8 billion net respectively, related to net investment and cash flow hedges. On an ongoing basis, the Company monitors counter-party credit ratings. The Company considers credit non-performance risk to be low, because the Company primarily enters into agreements with commercial institutions that have at least an investment grade credit rating. Refer to the table on significant financial assets and liabilities measured at fair value contained in this footnote for receivables and payables with these commercial institutions. As of December 31, 2023, the Company had notional amounts outstanding for forward foreign exchange contracts, cross currency interest rate swaps and interest rate swaps of $42.9 billion, $39.7 billion and $10.0 billion, respectively. As of January 1, 2023, the Company had notional amounts outstanding for forward foreign exchange contracts, cross currency interest rate swaps and interest rate swaps of $41.5 billion, $36.2 billion and $10.0 billion, respectively.

All derivative instruments are recorded on the balance sheet at fair value. Changes in the fair value of derivatives are recorded each period in current earnings or other comprehensive income, depending on whether the derivative is designated as part of a hedge transaction, and if so, the type of hedge transaction.

The designation as a cash flow hedge is made at the entrance date of the derivative contract. At inception, all derivatives are expected to be highly effective. Foreign exchange contracts designated as cash flow hedges are accounted for under the forward method and all gains/losses associated with these contracts will be recognized in the income statement when the hedged item impacts earnings. Changes in the fair value of these derivatives are recorded in accumulated other comprehensive income until the underlying transaction affects earnings, and are then reclassified to earnings in the same account as the hedged transaction.

Gains and losses associated with interest rate swaps and changes in fair value of hedged debt attributable to changes in interest rates are recorded to interest expense in the period in which they occur. Gains and losses on net investment hedges are accounted through the currency translation account within accumulated other comprehensive income. The portion excluded from effectiveness testing is recorded through interest (income) expense using the spot method. On an ongoing basis, the Company assesses whether each derivative continues to be highly effective in offsetting changes of hedged items. If and when a derivative is no longer expected to be highly effective, hedge accounting is discontinued.

The Company designated its Euro denominated notes issued in May 2016 with due dates ranging from 2022 to 2035 as a net investment hedge of the Company's investments in certain of its international subsidiaries that use the Euro as their functional currency in order to reduce the volatility caused by changes in exchange rates.

As of December 31, 2023, the balance of deferred net loss on derivatives included in accumulated other comprehensive income was $377 million after-tax. For additional information, see the Consolidated Statements of Comprehensive Income and Note 13. The Company expects that substantially all of the amounts related to forward foreign exchange contracts will be reclassified into earnings over the next 12 months as a result of transactions that are expected to occur over that period. The maximum length of time over which the Company is hedging transaction exposure is 18 months, excluding interest rate contracts and net investment hedges. The amount ultimately realized in earnings may differ as foreign exchange rates change. Realized gains and losses are ultimately determined by actual exchange rates at maturity of the derivative.

The following table is a summary of the activity related to derivatives and hedges for the fiscal years ended December 31, 2023 and January 1, 2023, net of tax:

	December 31, 2023					January 1, 2023				
(Dollars in Millions)	Sales	Cost of Products Sold	R&D Expense	Interest (Income) Expense	Other (Income) Expense	Sales	Cost of Products Sold	R&D Expense	Interest (Income) Expense	Other (Income) Expense
The effects of fair value, net investment and cash flow hedging:										
Gain (Loss) on fair value hedging relationship:										
Interest rate swaps contracts:										
Hedged items	$—	—	—	(930)	—	—	—	—	(1,098)	—
Derivatives designated as hedging instruments	—	—	—	930	—	—	—	—	1,098	—
Gain (Loss) on net investment hedging relationship:										
Cross currency interest rate swaps contracts:										
Amount of gain or (loss) recognized in income on derivative amount excluded from effectiveness testing	$—	—	—	130	—	—	—	—	140	—
Amount of gain or (loss) recognized in AOCI	—	—	—	130	—	—	—	—	140	—
Gain (Loss) on cash flow hedging relationship:										
Forward foreign exchange contracts:										
Amount of gain or (loss) reclassified from AOCI into income	7	186	(37)	—	8	(72)	(271)	149	—	(23)
Amount of gain or (loss) recognized in AOCI	10	447	(18)	—	9	5	319	61	—	(113)
Cross currency interest rate swaps contracts:										
Amount of gain or (loss) reclassified from AOCI into income	—	—	—	275	—	—	—	—	425	—
Amount of gain or (loss) recognized in AOCI	$—	—	—	(156)	—	—	—	—	42	—

As of December 31, 2023 and January 1, 2023, the following amounts were recorded on the consolidated balance sheet related to cumulative basis adjustment for fair value hedges

Line item in the Consolidated Balance Sheet in which the hedged item is included	Carrying Amount of the Hedged Liability		Cumulative Amount of Fair Value Hedging Adjustment Included in the Carrying Amount of the Hedged Liability	
(Dollars in Millions)	December 31, 2023	January 1, 2023	December 31, 2023	January 1, 2023
Long-term Debt	$8,862	$8,665	$(1,216)	$(1,435)

The following table is the effect of derivatives not designated as hedging instrument for the fiscal years ended December 31, 2023 and January 1, 2023:

(Dollars in Millions)	Location of Gain /(Loss) Recognized in Income on Derivative	Gain/(Loss) Recognized In Income on Derivative	
Derivatives Not Designated as Hedging Instruments		December 31, 2023	January 1, 2023
Foreign Exchange Contracts	Other (income) expense	$(60)	94

The following table is the effect of net investment hedges for the fiscal years ended December 31, 2023 and January 1, 2023:

	Gain/(Loss) Recognized In Accumulated OCI		Location of Gain or (Loss) Reclassified from Accumulated Other Comprehensive Income Into Income	Gain/(Loss) Reclassified From Accumulated OCI Into Income	
(Dollars in Millions)	December 31, 2023	January 1, 2023		December 31, 2023	January 1, 2023
Debt	$(131)	197	Interest (income) expense	—	—
Cross Currency interest rate swaps	$642	766	Interest (income) expense	—	—

The Company holds equity investments with readily determinable fair values and equity investments without readily determinable fair values. The Company measures equity investments that do not have readily determinable fair values at cost minus impairment, if any, plus or minus changes resulting from observable price changes in orderly transactions for the identical or a similar investment of the same issuer.

The following table is a summary of the activity related to equity investments for the fiscal years ended December 31, 2023 and January 1, 2023:

	January 1, 2023			December 31, 2023	
(Dollars in Millions)	Carrying Value	Changes in Fair Value Reflected in Net Income[1]	Sales/ Purchases/ Other[2]	Carrying Value	Non Current Other Assets
Equity Investments with readily determinable value *	$576	(368)	4,265	4,473	4,473
Equity Investments without readily determinable value	$613	1	82	696	696

(Dollars in Millions)	January 2, 2022 Carrying Value	Changes in Fair Value Reflected in Net Income[1]	Sales/ Purchases/ Other[2]	January 1, 2023 Carrying Value	Non Current Other Assets
Equity Investments with readily determinable value	$1,884	(538)	(770)	576	576
Equity Investments without readily determinable value	$413	93	107	613	613

(1) Recorded in Other Income/Expense

(2) Other includes impact of currency

* Includes the 9.5% remaining stake in Kenvue and the $0.4 billion unfavorable change in fair value of the investment between separation date and the end of the fiscal year.

For the fiscal years ended December 31, 2023 and January 1, 2023 for equity investments without readily determinable market values, $1 million and $51 million, respectively, of the changes in fair value reflected in net income were the result of impairments. There were offsetting impacts of $27 million and $142 million, respectively, of changes in the fair value reflected in net income due to changes in observable prices and gains on the disposal of investments.

Fair value is the exit price that would be received to sell an asset or paid to transfer a liability. Fair value is a market-based measurement determined using assumptions that market participants would use in pricing an asset or liability. In accordance with ASC 820, a three-level hierarchy to prioritize the inputs used in measuring fair value. The levels within the hierarchy are described below with Level 1 having the highest priority and Level 3 having the lowest.

The fair value of a derivative financial instrument (i.e., forward foreign exchange contracts, interest rate contracts) is the aggregation by currency of all future cash flows discounted to its present value at the prevailing market interest rates and subsequently converted to the U.S. Dollar at the current spot foreign exchange rate. The Company does not believe that fair values of these derivative instruments materially differ from the amounts that could be realized upon settlement or maturity, or that the changes in fair value will have a material effect on the Company's results of operations, cash flows or financial position. The Company also holds equity investments which are classified as Level 1 and debt securities which are classified as Level 2. The Company holds acquisition related contingent liabilities based upon certain regulatory and commercial events, which are classified as Level 3, whose values are determined using discounted cash flow methodologies or similar techniques for which the determination of fair value requires significant judgment or estimations.

The following three levels of inputs are used to measure fair value:

Level 1 — Quoted prices in active markets for identical assets and liabilities.

Level 2 — Significant other observable inputs.

Level 3 — Significant unobservable inputs.

The Company's significant financial assets and liabilities measured at fair value as of the fiscal year ended December 31, 2023 and January 1, 2023 were as follows:

	2023				2022
(Dollars in Millions)	Level 1	Level 2	Level 3	Total	Total[1]
Derivatives designated as hedging instruments:					
Assets:					
Forward foreign exchange contracts	$—	539	—	539	629
Interest rate contracts [2]	—	988	—	988	1,534
Total	**$—**	**1,527**	**—**	**1,527**	**2,163**
Liabilities:					
Forward foreign exchange contracts	—	624	—	624	511
Interest rate contracts [2]	—	5,338	—	5,338	2,778
Total	**$—**	**5,962**	**—**	**5,962**	**3,289**
Derivatives not designated as hedging instruments:					
Assets:					
Forward foreign exchange contracts	$—	64	—	64	38
Liabilities:					
Forward foreign exchange contracts	—	75	—	75	68
Available For Sale Other Investments:					
Equity investments[3]	4,473	—	—	4,473	576
Debt securities[4]	—	8,874	—	8,874	10,487
Other Liabilities					
Contingent Consideration[5]	$		1,092	1,092	1,120

Gross to Net Derivative Reconciliation	2023	2022
(Dollars in Millions)		
Total Gross Assets	$1,591	2,201
Credit Support Agreements (CSA)	(1,575)	(2,176)
Total Net Asset	16	25
Total Gross Liabilities	6,037	3,357
Credit Support Agreements (CSA)	(5,604)	(3,023)
Total Net Liabilities	$433	334

Summarized information about changes in liabilities for contingent consideration is as follows:

(Dollars in Millions)	2023	2022	2021
Beginning Balance	$1,120	533	633
Changes in estimated fair value	29	(194)	(52)
Additions [6]	—	792	—
Payments/Other	(57)	(11)	(48)
Ending Balance [5]	$1,092	1,120	533

(1) 2022 assets and liabilities are all classified as Level 2 with the exception of equity investments of $576 million, which are classified as Level 1 and contingent consideration of $1,120 million, classified as Level 3.

(2) Includes cross currency interest rate swaps and interest rate swaps.

(3) Classified as non-current other assets.

(4) Classified as cash equivalents and current marketable securities.

(5) Includes $1,092 million, $1,116 million and $520 million, classified as non-current other liabilities as of December 31, 2023, January 1, 2023 and January 2, 2022, respectively. Includes $4 million and $13 million classified as current liabilities as of January 1, 2023 and January 2, 2022, respectively.

(6) In fiscal year 2022, the Company recorded $704 million of contingent consideration related to Abiomed.

See Notes 2 and 7 for financial assets and liabilities held at carrying amount on the Consolidated Balance Sheet.

7. Borrowings

The components of long-term debt are as follows:

(Dollars in Millions)	2023	Effective Rate %	2022	Effective Rate %
6.73% Debentures due 2023	$—	—%	$250	6.73%
3.375% Notes due 2023	—	—	801	3.17
2.05% Notes due 2023	—	—	500	2.09
0.650% Notes due 2024 (750MM Euro 1.1090)[2]/(750MM Euro 1.0651)[3]	831 [2]	0.68	792 [3]	0.68
5.50% Notes due 2024 (500MM 1.2756 GBP)[2]/(500MM GBP 1.2037)[3]	637 [2]	6.75	600 [3]	6.75

2.450% Notes due 2060	1,073	2.49	1,055	2.49
Other	69	—	7	—
Subtotal	**27,350** [4]	**2.98%** [1]	**28,437** [4]	**3.04%** [1]
Less current portion	1,469		1,551	
Total long-term debt	**$25,881**		**$26,886**	

[1] Weighted average effective rate.

(2) Translation rate at December 31, 2023.

(3) Translation rate at January 1, 2023.

(4) The excess of the carrying value over the fair value of debt was $1.0 billion and $1.6 billion at the end of fiscal year 2023 and fiscal year 2022, respectively.

Fair value of the long-term debt was estimated using market prices, which were corroborated by quoted broker prices and significant other observable inputs.

The Company has access to substantial sources of funds at numerous banks worldwide. In September 2023, the Company secured a new 364-day Credit Facility of $10 billion, which expires on September 5, 2024. The Company early terminated the additional 364-day revolving Credit Facility of $10 billion, which had an expiration of November 21, 2023. Interest charged on borrowings under the credit line agreement is based on either the Term SOFR Reference Rate or other applicable market rates as allowed under the terms of the agreement, plus applicable margins. Commitment fees under the agreements are not material.

Throughout fiscal years 2023 and 2022, the Company continued to have access to liquidity through the commercial paper market. Short-term borrowings and the current portion of long-term debt amounted to approximately $3.5 billion and $12.8 billion at the end of fiscal years 2023 and 2022, respectively. The current portion of the long term debt was $1.5 billion and $1.6 billion in 2023 and 2022, respectively, and the remainder is commercial paper and local borrowing by international subsidiaries.

The current debt balance as of December 31, 2023 includes $2.0 billion of commercial paper which has a weighted average interest rate of 5.37% and a weighted average maturity of approximately two months. The current debt balance as of January 1, 2023 includes $11.2 billion of commercial paper which has a weighted average interest rate of 4.23% and a weighted average maturity of approximately two months.

Aggregate maturities of long-term debt obligations commencing in 2024 are:

(Dollars in Millions)					
2024	2025	2026	2027	2028	After 2028
$1,469	1,700	1,997	2,320	2,325	17,539

8. Income taxes

The provision for taxes on income consists of:

(Dollars in Millions)	2023	2022	2021
Currently payable:			
U.S. taxes	$2,705	2,274	1,338
International taxes	3,090	2,295	2,069
Total currently payable	5,795	4,569	3,407
Deferred:			
U.S. taxes	(3,440)	(1,990)	565
International taxes	(619)	410	(2,595)
Total deferred	(4,059)	(1,580)	(2,030)
Provision for taxes on income	**$1,736**	**2,989**	**1,377**

A comparison of income tax expense at the U.S. statutory rate of 21% in fiscal years 2023, 2022 and 2021, to the Company's effective tax rate is as follows:

(Dollars in Millions)	2023	2022	2021
U.S.	$(2,033)	4,606	4,275
International	17,095	14,753	14,903
Earnings before taxes on income:	$15,062	19,359	19,178
Tax rates:			
U.S. statutory rate	21.0%	21.0	21.0
International operations[1]	(8.1)	(5.0)	(19.1)
U.S. Tax Settlements	(3.0)	—	—
U.S. taxes on international income[2]	(0.3)	(1.1)	8.9
Tax benefits from loss on capital assets	—	—	(1.6)
Tax benefits on share-based compensation	(0.8)	(1.4)	(1.2)
All other	2.7	1.9	(0.8)
Effective Rate	11.5%	15.4	7.2

(1) International operations reflect the impacts of operations in jurisdictions with statutory tax rates different than the U.S., particularly Ireland, Switzerland, Belgium and Puerto Rico, which is a favorable impact on the effective tax rate as compared with the U.S. statutory rate.

(2) Includes the impact of the GILTI tax, the Foreign-Derived Intangible Income deduction and other foreign income that is taxable under the U.S. tax code. The 2023 and 2022 amount includes the impact of certain provisions of the 2017 TCJA that became effective in fiscal 2022. The 2023 amount includes the impact of certain foreign subsidiaries deferred tax remeasurements for legislative elections and the 2021 amounts include the reorganization of international subsidiaries further described below.

The fiscal year 2023 effective tax rate decreased 3.9% as compared to the fiscal year 2022 effective tax rate as the Company recorded certain non-recurring favorable tax items in fiscal year 2023 when compared to the prior fiscal year.

In the fiscal fourth quarter of 2023, the Company settled the U.S. Internal Revenue Service audit for tax years 2013 through 2016 which resulted in a favorable impact to the rate of 3.0%. This settlement was partially offset by the Company recording a $0.4 billion decrease in expected U.S. foreign tax credits, an unfavorable effective rate impact of 2.6%, which has been reflected as a current tax expense in U.S. taxes on international income on the Company's effective tax rate reconciliation.

In the fiscal year 2023, the Company had certain non-recurring impacts as a result of legislative tax elections made in certain international subsidiaries which resulted in a change in the Company's tax basis in certain assets resulting in deferred tax re-measurements. The net impact of these non-recurring items is a net benefit of 3.4% to the Company's annual effective tax rate, comprised of the following items:

- approximately $0.3 billion of tax benefit on local deferred tax assets to record the remeasurement of the increased tax basis, this benefit has been reflected as International operations on the Company's effective tax rate reconciliation. This benefit was offset by approximately $0.1 billion of U.S. deferred tax expense on the GILTI deferred tax liability resulting from the remeasurement of these deferred tax assets. This has been reflected in the "U.S. tax on international income" on the Company's effective tax rate reconciliation.
- approximately $0.3 billion of U.S. deferred tax benefit on the GILTI deferred tax as a result of an international subsidiary making an election to change the treatment of a local deferred tax asset to a refundable tax credit. This has been reflected in the U.S. taxes on international income on the Company's effective tax rate reconciliation.

The Company's 2023 and 2022 tax rates benefited from certain provisions of the Tax Cuts and Jobs Act of 2017 that became effective in fiscal 2022. The Company also had lower income in higher tax jurisdictions vs. fiscal year 2022, primarily in the U.S. where the Company recorded an approximately $7.0 billion charge related to talc matters in the United States at an effective tax rate of 21.1% (for further information see Note 19 to the Consolidated Financial Statements).

The fiscal year 2022 effective tax rate increased 8.2% as compared to the fiscal year 2021 effective tax rate as the Company recorded certain non-recurring favorable tax items in fiscal year 2021 which resulted in an unfavorable impact to the Company's fiscal 2022 effective tax rate when compared to the prior fiscal year. These items are described below. The Company's 2022 tax rate also benefited from the impairment of bermekimab for AD IPR&D and changes in the fair value of securities in the Company's investment portfolio, both recorded at the U.S. statutory rate.

In the fiscal year 2021, the Company reorganized the ownership structure of certain wholly-owned international subsidiaries. As part of this reorganization, the Company increased the tax basis of certain assets to fair value in accordance with applicable local regulations. The net impact of this restructuring was approximately $0.6 billion net benefit or 3.2% benefit to the Company's annual effective tax rate, comprised of the following items:

- approximately $2.3 billion of local deferred tax assets to record the remeasurement of the tax basis of these assets to fair value, this benefit has been reflected as International operations on the Company's effective tax rate reconciliation.
- approximately $1.7 billion of U.S. deferred tax expense relating to the GILTI deferred tax liability resulting from the remeasurement of these deferred tax assets. This expense has been reflected as U.S. taxes on international income on the Company's effective tax rate reconciliation.

Also, in the fiscal fourth quarter of 2021, the Company recognized a loss on certain U.S. affiliates related to the previously impaired book value of certain intangibles, which reduced the 2021 effective tax rate by approximately 1.6% which is reflected as a Tax benefits from loss on capital assets on the effective tax rate reconciliation. Additionally other fiscal 2021 impacts to the rate were primarily driven by litigation and acquisition related items as follows:

- the Company accrued additional legal expenses, of approximately $1.6 billion for talc at an effective tax rate of 23.5% and $0.8 billion for Risperdal Gynecomastia settlements at an effective tax rate of 16.4% (See Note 19 to the Consolidated Financial Statements for more details).
- the Company recorded a partial IPR&D charge of $0.9 billion for the Ottava intangible asset (acquired with the Auris Health acquisition in 2019) at an effective rate of 22.4%.

Temporary differences and carryforwards at the end of fiscal years 2023 and 2022 were as follows:

	2023 Deferred Tax		2022 Deferred Tax	
(Dollars in Millions)	**Asset**	**Liability**	**Asset**	**Liability**
Employee related obligations	$586		685	
Stock based compensation	686		632	
Depreciation of property, plant and equipment		(902)		(845)
Goodwill and intangibles		(1,252)		(1,737)
R&D capitalized for tax	3,595		2,611	
Reserves & liabilities	3,816		2,733	
Income reported for tax purposes[1]	359		2,026	
Net realizable operating loss carryforwards[2]	996		1,319	
Undistributed foreign earnings	1,801	(1,695)	1,517	(1,604)
Global intangible low-taxed income		(2,731)		(3,628)
Miscellaneous international	831		861	(66)
Miscellaneous U.S.		(4)	452	
Total deferred income taxes	**$12,670**	**(6,584)**	**12,836**	**(7,880)**

(1) In fiscal 2023, the Company changed the presentation of income taxes accrued on intercompany profits on inventory still owned by the Company as part of "Prepaid expenses and other" on the Consolidated Balance Sheet.

(2) Net of valuation allowances of $1.1 billion and $0.8 billion in 2023 and 2022. The change in the valuation allowance from 2022 to 2023 was driven by approximately $0.1 billion from acquisition related activity and the remainder was due to normal operations during the fiscal year.

The Company has wholly-owned international subsidiaries that have cumulative net losses. The Company believes that it is more likely than not that these subsidiaries will generate future taxable income sufficient to utilize these deferred tax assets. However, in certain jurisdictions, valuation allowances have been recorded against deferred tax assets for loss carryforwards that are not more likely than not to be realized.

The following table summarizes the activity related to unrecognized tax benefits for continuing operations:

(Dollars in Millions)	2023	2022	2021
Beginning of year	$3,716	3,210	3,260
Increases related to current year tax positions	239	523	242
Increases related to prior period tax positions	244	143	23
Decreases related to prior period tax positions	(781)	(148)	(128)
Settlements	(880)	(1)	(187)
Lapse of statute of limitations	(53)	(11)	—
End of year	**$2,485**	**3,716**	**3,210**

As of December 31, 2023 the Company had approximately $2.5 billion of unrecognized tax benefits. The Company conducts business and files tax returns in numerous countries and currently has tax audits in progress with a number of tax authorities. With respect to the United States the Internal Revenue Service has completed its audit for all tax years through 2016.

In other major jurisdictions where the Company conducts business, the years that remain open to tax audits go back to the year 2008. The Company believes it is possible that some tax audits may be completed over the next twelve months by taxing authorities in some jurisdictions, including in the United States. However, the Company is not able to provide a reasonably reliable estimate of the timing of any other future tax payments or change in uncertain tax positions, if any.

The Company classifies liabilities for unrecognized tax benefits and related interest and penalties as long-term liabilities. Interest expense and penalties related to unrecognized tax benefits are classified as income tax expense. The Company recognized after tax interest expense of $99 million, $136 million and $42 million in fiscal years 2023, 2022 and 2021, respectively. The total amount of accrued interest was $264 million and $637 million in fiscal years 2023 and 2022, respectively.

9. Employee related obligations

At the end of fiscal 2023 and fiscal 2022, employee related obligations recorded on the Consolidated Balance Sheets were:

(Dollars in Millions)	2023	2022
Pension benefits	$3,129	2,475
Postretirement benefits	1,963	1,728
Postemployment benefits	2,527	2,832
Deferred compensation	68	100
Total employee obligations	7,687	7,135
Less current benefits payable	538	593
Employee related obligations — non-current	**$7,149**	**6,542**

Prepaid employee related obligations of $4,992 million and $4,581 million for 2023 and 2022, respectively, are included in Other assets on the Consolidated Balance Sheets.

10. Pensions and other benefit plans

The Company sponsors various retirement and pension plans, including defined benefit, defined contribution and termination indemnity plans, which cover most employees worldwide. The Company also provides post-retirement benefits, primarily healthcare, to all eligible U.S. retired employees and their dependents.

Many international employees are covered by government-sponsored programs and the cost to the Company is not significant.

In the U.S, non-union pension benefits for employees hired before January 1, 2015 are primarily based on the employee's compensation during the last five years before retirement and the number of years of service (the Final Average Pay formula). U.S. pension benefits for employees hired after 2014, are calculated using a different formula based on employee compensation over total years of service (the Retirement Value formula).

In January 2021, the Company announced that, effective on January 1, 2026, all eligible U.S. non-union employees, regardless of hire date, will earn benefits under the Retirement Value formula. This amendment does not affect the benefits accrued under the Final Average Pay formula for service before January 1, 2026.

International subsidiaries have plans under which funds are deposited with trustees, annuities are purchased under group contracts, or reserves are provided.

The Company does not fund retiree healthcare benefits in advance and has the right to modify these plans in the future.

In 2023 and 2022 the Company used December 31, 2023 and December 31, 2022, respectively, as the measurement date for all U.S. and international retirement and other benefit plans.

Net periodic benefit costs for the Company's defined benefit retirement plans and other benefit plans for 2023, 2022 and 2021 include the following components:

	Retirement Plans			Other Benefit Plans		
(Dollars in Millions)	**2023**	**2022**	**2021**	**2023**	**2022**	**2021**
Service cost	$893	1,319	1,412	264	320	309
Interest cost	1,437	908	768	214	104	80
Expected return on plan assets	(2,716)	(2,756)	(2,644)	(7)	(8)	(7)
Amortization of prior service cost	(184)	(184)	(181)	(2)	(5)	(31)
Recognized actuarial losses (gains)	(199)	650	1,251	23	122	151
Curtailments and settlements	93	1	1	(5)	—	—
Net periodic benefit cost (credit)	**$(676)**	**(62)**	**607**	**487**	**533**	**502**

The service cost component of net periodic benefit cost is presented in the same line items on the Consolidated Statement of Earnings where other employee compensation costs are reported, including Cost of products sold, Research and development expense, Selling, marketing and administrative expenses, and Net earnings from discontinued operations, net of taxes if related to the separation of Kenvue. All other components of net periodic benefit cost are presented as part of Other (income) expense, net on the Consolidated Statement of Earnings, with the exception of certain amounts for curtailments and settlements, which are reported in Net earnings from discontinued operations, net of taxes if related to the separation of Kenvue (as noted above).

Unrecognized gains and losses for the U.S. pension plans are amortized over the average remaining future service for each plan. For plans with no active employees, they are amortized over the average life expectancy. The amortization of gains and losses for the other U.S. benefit plans is determined by using a 10% corridor of the greater of the market value of assets or the accumulated postretirement benefit obligation. Total unamortized gains and losses in excess of the corridor are amortized over the average remaining future service.

Prior service costs/benefits for the U.S. pension plans are amortized over the average remaining future service of plan participants at the time of the plan amendment. Prior service cost/benefit for the other U.S. benefit plans is amortized over the average remaining service to full eligibility age of plan participants at the time of the plan amendment.

The following table represents the weighted-average actuarial assumptions:

	Retirement Plans			Other Benefit Plans		
Worldwide Benefit Plans	**2023**	**2022**	**2021**	**2023**	**2022**	**2021**
Net Periodic Benefit Cost						
Service cost discount rate	4.85%	2.46	2.14	5.40	2.59	2.09
Interest cost discount rate	5.25%	2.80	2.34	5.43	2.64	2.33
Rate of increase in compensation levels	3.71%	4.02	4.01	4.22	4.21	4.25
Expected long-term rate of return on plan assets	7.21%	7.25	7.71			
Benefit Obligation						
Discount rate	4.58%	5.01	2.49	5.11	5.42	2.68
Rate of increase in compensation levels	3.69%	4.00	4.01	4.22	4.21	4.21

The Company's discount rates are determined by considering current yield curves representing high quality, long-term fixed income instruments. The resulting discount rates are consistent with the duration of plan liabilities. The Company's methodology in determining service and interest cost uses duration specific spot rates along that yield curve to the plans' liability cash flows.

The expected rates of return on plan asset assumptions represent the Company's assessment of long-term returns on diversified investment portfolios globally. The assessment is determined using projections from external financial sources, long-term historical averages, actual returns by asset class and the various asset class allocations by market.

The following table displays the assumed healthcare cost trend rates, for all individuals:

Healthcare Plans	**2023**	**2022**
Healthcare cost trend rate assumed for next year	13.90% *	5.96%
Rate to which the cost trend rate is assumed to decline (ultimate trend)	4.00%	3.99%
Year the rate reaches the ultimate trend rate	2048	2047

*excludes ongoing negotiations regarding healthcare cost with service providers

The following table sets forth information related to the benefit obligation and the fair value of plan assets at fiscal year-end 2023 and 2022 for the Company's defined benefit retirement plans and other post-retirement plans:

	Retirement Plans		Other Benefit Plans	
(Dollars in Millions)	**2023**	**2022**	**2023**	**2022**
Change in Benefit Obligation				
Projected benefit obligation — beginning of year	$29,390	41,272	4,192	4,874
Service cost	893	1,319	264	320
Interest cost	1,437	908	214	104
Plan participant contributions	73	67	—	—
Amendments	(6)	7	—	—
Actuarial (gains) losses[1]	2,068	(12,159)	469	(704)
Divestitures & acquisitions[2]	(352)	—	1	—
Curtailments, settlements & restructuring	(238)	(7)	(332)	—
Benefits paid from plan[3]	(2,122)	(1,220)	(702)	(393)
Effect of exchange rates	601	(797)	2	(9)
Projected benefit obligation — end of year	**$31,744**	**29,390**	**4,108**	**4,192**

Change in Plan Assets				
Plan assets at fair value — beginning of year	$31,496	41,909	78	102
Actual return (loss) on plan assets	3,951	(8,663)	16	(17)
Company contributions	268	261	694	386
Plan participant contributions	73	67	—	—
Settlements	(176)	(5)	—	—
Divestitures & acquisitions[2]	(509)	—	—	—
Benefits paid from plan assets[3]	(2,122)	(1,220)	(702)	(393)
Effect of exchange rates	626	(853)	—	—
Plan assets at fair value — end of year	**$33,607**	**31,496**	**86**	**78**
Funded status — end of year	**$1,863**	**2,106**	**(4,022)**	**(4,114)**
Amounts Recognized in the Company's Balance Sheet consist of the following:				
Non-current assets	$4,992	4,581	—	—
Current liabilities	(119)	(127)	(416)	(461)
Non-current liabilities	(3,010)	(2,348)	(3,606)	(3,653)
Total recognized in the consolidated balance sheet — end of year	**$1,863**	**2,106**	**(4,022)**	**(4,114)**
Amounts Recognized in Accumulated Other Comprehensive Income consist of the following:				
Net actuarial loss	$4,962	3,948	354	239
Prior service cost (credit)	(1,236)	(1,417)	(6)	(7)
Unrecognized net transition obligation	—	—	—	
Total before tax effects	**$3,726**	**2,531**	**348**	**232**
Accumulated Benefit Obligations — end of year	**$30,139**	**27,797**		

(1) The actuarial (gains)/losses for retirement plans in 2023 and 2022 were primarily driven by changes in the discount rates.

(2) Primarily driven by the Kenvue separation.

(3) Includes approximately $800 million transferred to a group annuity contract issued by a third-party insurer for the U.S. Salaried Pension Plan.

	Retirement Plans		Other Benefit Plans	
(Dollars in Millions)	**2023**	**2022**	**2023**	**2022**
Amounts Recognized in Net Periodic Benefit Cost and Other Comprehensive Income				
Net periodic benefit cost (credit)	$(676)	(62)	487	533
Net actuarial (gain) loss	711	(793)	136	(751)
Amortization of net actuarial loss	199	(655)	(22)	(121)
Prior service cost (credit)	(2)	7	—	—
Amortization of prior service (cost) credit	185	183	2	5
Effect of exchange rates	103	(140)	—	(1)
Total loss/(income) recognized in other comprehensive income, before tax	**$1,195**	**(1,398)**	**116**	**(868)**
Total recognized in net periodic benefit cost and other comprehensive income	**$519**	**(1,460)**	**603**	**(335)**

The Company plans to continue to fund its U.S. Qualified Plans to comply with the Pension Protection Act of 2006. International Plans are funded in accordance with local regulations. Additional discretionary contributions are made when deemed appropriate to meet the long-term obligations of the plans. For certain plans, funding is not a common practice, as funding provides no economic benefit. Consequently, the Company has several pension plans that are not funded.

In 2023, the Company contributed $135 million and $133 million to its U.S. and international pension plans, respectively.

The following table displays the funded status of the Company's U.S. Qualified & Non-Qualified pension plans and international funded and unfunded pension plans at December 31, 2023 and December 31, 2022, respectively:

	U.S. Plans				International Plans			
	Qualified Plans		Non-Qualified Plans		Funded Plans		Unfunded Plans	
(Dollars in Millions)	2023	2022	2023	2022	2023	2022	2023	2022
Plan Assets	$22,298	20,937	—	—	11,309	10,559	—	—
Projected Benefit Obligation	19,152	18,394	2,037	1,937	10,431	8,982	124	77
Accumulated Benefit Obligation	18,557	17,696	1,982	1,872	9,498	8,166	102	63
Over (Under) Funded Status								
Projected Benefit Obligation	$3,146	2,543	(2,037)	(1,937)	878	1,577	(124)	(77)
Accumulated Benefit Obligation	3,741	3,241	(1,982)	(1,872)	1,811	2,393	(102)	(63)

Plans with accumulated benefit obligations in excess of plan assets have an accumulated benefit obligation, projected benefit obligation and plan assets of $5.8 billion, $6.1 billion and $3.1 billion, respectively, at the end of 2023, and $2.7 billion, $2.7 billion and $0.3 billion, respectively, at the end of 2022.

The following table displays the projected future benefit payments from the Company's retirement and other benefit plans:

(Dollars in Millions)	2024	2025	2026	2027	2028	2029-2033
Projected future benefit payments						
Retirement plans	$1,481	1,473	1,549	1,647	1,745	10,133
Other benefit plans	$427	438	396	411	428	2,360

The following table displays the projected future minimum contributions to the unfunded retirement plans. These amounts do not include any discretionary contributions that the Company may elect to make in the future.

(Dollars in Millions)	2024	2025	2026	2027	2028	2029-2033
Projected future contributions	$122	126	133	139	145	787

Each pension plan is overseen by a local committee or board that is responsible for the overall administration and investment of the pension plans. In determining investment policies, strategies and goals, each committee or board considers factors including, local pension rules and regulations; local tax regulations; availability of investment vehicles (separate accounts, commingled accounts, insurance funds, etc.); funded status of the plans; ratio of actives to retirees; duration of liabilities; and other relevant factors including: diversification, liquidity of local markets and liquidity of base currency. A majority of the Company's pension funds are open to new entrants and are expected to be on-going plans. Permitted investments are primarily liquid and/or listed, with little reliance on illiquid and non-traditional investments such as hedge funds.

The Company's retirement plan asset allocation at the end of 2023 and 2022 and target allocations for 2024 are as follows:

	Percent of Plan Assets		Target Allocation
	2023	2022	2024
Worldwide Retirement Plans			
Equity securities	58%	62%	58%
Debt securities	42	38	42
Total plan assets	**100%**	**100%**	**100%**

Determination of fair value of plan assets

The Plan has an established and well-documented process for determining fair values. Fair value is based upon quoted market prices, where available. If listed prices or quotes are not available, fair value is based upon models that primarily use, as inputs, market-based or independently sourced market parameters, including yield curves, interest rates, volatilities, equity or debt prices, foreign exchange rates and credit curves.

While the Plan believes its valuation methods are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date.

Valuation hierarchy

The authoritative literature establishes a three-level hierarchy to prioritize the inputs used in measuring fair value. The levels within the hierarchy are described in the table below with Level 1 having the highest priority and Level 3 having the lowest.

The Net Asset Value (NAV) is based on the value of the underlying assets owned by the fund, minus its liabilities, and then divided by the number of shares outstanding.

A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement.

Following is a description of the valuation methodologies used for the investments measured at fair value.

- *Short-term investment funds* — Cash and quoted short-term instruments are valued at the closing price or the amount held on deposit by the custodian bank. Other investments are through investment vehicles valued using the NAV provided by the administrator of the fund. The NAV is a quoted price in a market that is not active and classified as Level 2.
- *Government and agency securities* — A limited number of these investments are valued at the closing price reported on the major market on which the individual securities are traded. Where quoted prices are available in an active market, the investments are classified within Level 1 of the valuation hierarchy. If quoted market prices are not available for the specific security, then fair values are estimated by using pricing models, quoted prices of securities with similar characteristics or discounted cash flows. When quoted market prices for a security are not available in an active market, they are classified as Level 2.
- *Debt instruments* — A limited number of these investments are valued at the closing price reported on the major market on which the individual securities are traded. Where quoted prices are available in an active market, the investments are classified as Level 1. If quoted market prices are not available for the specific security, then fair values are estimated by using pricing models, quoted prices of securities with similar characteristics or discounted cash flows and are classified as Level 2. Level 3 debt instruments are priced based on unobservable inputs.
- *Equity securities* — Equity securities are valued at the closing price reported on the major market on which the individual securities are traded. Substantially all equity securities are classified within Level 1 of the valuation hierarchy.
- *Commingled funds* — These investment vehicles are valued using the NAV provided by the fund administrator. Assets in the Level 2 category have a quoted market price.
- *Other assets* — Other assets are represented primarily by limited partnerships. These investment vehicles are valued using the NAV provided by the fund administrator. Other assets that are exchange listed and actively traded are classified as Level 1, while inactively traded assets are classified as Level 2.

The following table sets forth the Retirement Plans' investments measured at fair value as of December 31, 2023 and December 31, 2022:

	Quoted Prices in Active Markets for Identical Assets (Level 1)		Significant Other Observable Inputs (Level 2)		Significant Unobservable Inputs[1] (Level 3)		Investments Measured at Net Asset Value		Total Assets	
(Dollars in Millions)	**2023**	**2022**	**2023**	**2022**	**2023**	**2022**	**2023**	**2022**	**2023**	**2022**
Short-term investment funds	$12	26	829	13	—	—	—	—	841	39
Government and agency securities	—	—	5,985	5,863	—	—	—	—	5,985	5,863
Debt instruments	—	—	3,899	3,681	—	—	—	—	3,899	3,681
Equity securities	7,764	8,846	—	2	—	—	—	—	7,764	8,848
Commingled funds	—	—	4,967	4,362	43	56	6,672	6,096	11,682	10,514
Other assets	—	—	49	33	92	12	3,295	2,506	3,436	2,551
Investments at fair value	**$7,776**	**8,872**	**15,729**	**13,954**	**135**	**68**	**9,967**	**8,602**	**33,607**	**31,496**

[1] The activity for the Level 3 assets is not significant for all years presented.

The Company's Other Benefit Plans are unfunded except for U.S. commingled funds (Level 2) of $86 million and $78 million at December 31, 2023 and December 31, 2022, respectively.

The fair value of Johnson & Johnson Common Stock directly held in plan assets was $14 million (0.0% of total plan assets) at December 31, 2023 and $21 million (0.1% of total plan assets) at December 31, 2022.

11. Savings plan

The Company has voluntary 401(k) savings plans designed to enhance the existing retirement programs covering eligible employees. The Company matches a percentage of each employee's contributions consistent with the provisions of the plan for which the employee is eligible. Total Company matching contributions to the plans were $263 million, $257 million and $239 million in fiscal years 2023, 2022 and 2021, respectively.

12. Capital and treasury stock

Changes in treasury stock were:

	Treasury Stock	
(Amounts in Millions Except Treasury Stock Shares in Thousands)	Shares	Amount
Balance at January 3, 2021	487,331	$38,490
Employee compensation and stock option plans	(17,399)	(2,847)
Repurchase of common stock	20,946	3,456
Balance at January 2, 2022	490,878	39,099
Employee compensation and stock option plans	(20,007)	(3,440)
Repurchase of common stock	35,375	6,035
Balance at January 1, 2023	506,246	41,694
Employee compensation and stock option plans	(15,521)	(2,529)
Repurchase of common stock	31,085	5,079
Kenvue share exchange (Note 21)	190,955	31,418
Balance at December 31, 2023	712,765	$75,662

Aggregate shares of common stock issued were approximately 3,119,843,000 shares at the end of fiscal years 2023, 2022 and 2021.

Cash dividends paid were $4.70 per share in fiscal year 2023, compared with dividends of $4.45 per share in fiscal year 2022, and $4.19 per share in fiscal year 2021.

On January 2, 2024, the Board of Directors declared a regular cash dividend of $1.19 per share, payable on March 5, 2024 to shareholders of record as of February 20, 2024.

On September 14, 2022, the Company announced that its Board of Directors approved a share repurchase program, authorizing the Company to purchase up to $5.0 billion of the Company's shares of common stock. The repurchase program was completed during the fiscal first quarter of 2023.

13. Accumulated other comprehensive income (loss)

Components of other comprehensive income (loss) consist of the following:

(Dollars in Millions)	Foreign Currency Translation	Gain/ (Loss) On Securities	Employee Benefit Plans	Gain/ (Loss) On Derivatives & Hedges	Total Accumulated Other Comprehensive Income (Loss)
January 3, 2021	$(8,938)	1	(6,957)	652	(15,242)
Net 2021 changes	(1,079)	(4)	4,255	(988)	2,184
January 2, 2022	(10,017)	(3)	(2,702)	(336)	(13,058)
Net 2022 changes	(1,796)	(24)	1,805	106	91
January 1, 2023	(11,813)	(27)	(897)	(230)	(12,967)
Net 2023 changes	(3,221)	26	(1,399)	(147)	(4,741)
Kenvue Separation/IPO	4,885		296 *		5,181
December 31, 2023	$(10,149)	(1)	(2,000)	(377)	(12,527)

Amounts in accumulated other comprehensive income are presented net of the related tax impact. Foreign currency translation is not adjusted for income taxes where it relates to permanent investments in international subsidiaries. For additional details on comprehensive income see the Consolidated Statements of Comprehensive Income.

Details on reclassifications out of Accumulated Other Comprehensive Income:

Gain/(Loss) On Securities - reclassifications released to Other (income) expense, net.

Employee Benefit Plans - reclassifications are included in net periodic benefit cost. See Note 10 for additional details.

Gain/(Loss) On Derivatives & Hedges - reclassifications to earnings are recorded in the same account as the hedged transaction. See Note 6 for additional details.

* Includes impact of curtailments and settlements in connection with separation from Kenvue.

14. International currency translation

For translation of its subsidiaries operating in non-U.S. Dollar currencies, the Company has determined that the local currencies of its international subsidiaries are the functional currencies except those in highly inflationary economies, which are defined as those which have had compound cumulative rates of inflation of 100% or more during the past three years, or where a substantial portion of its cash flows are not in the local currency. For the majority of the Company's subsidiaries the local currency is the functional currency.

In consolidating international subsidiaries, balance sheet currency effects are recorded as a component of accumulated other comprehensive income. The other current and non-current assets line within the Statement of Cash flows includes the impact of foreign currency translation. This equity account includes the results of translating certain balance sheet assets and liabilities at current exchange rates and some accounts at historical rates, except for those located in highly inflationary economies (Argentina and Venezuela). Beginning in the fiscal second quarter of 2022, the Company also accounted for operations in Turkey as highly inflationary. The translation of balance sheet accounts for highly inflationary economies are reflected in the operating results.

A rollforward of the changes during fiscal years 2023, 2022 and 2021 for foreign currency translation adjustments is included in Note 13.

Net currency transaction gains and losses included in Other (income) expense were losses of $366 million, $286 million and $216 million in fiscal years 2023, 2022 and 2021, respectively.

15. Earnings per share

The following is a reconciliation of basic net earnings per share to diluted net earnings per share for the fiscal years ended December 31, 2023, January 1, 2023 and January 2, 2022:

(In Millions Except Per Share Amounts)	2023	2022	2021
Basic net earnings per share from continuing operations	$5.26	6.23	6.76
Basic net earnings per share from discontinued operations	8.62	0.60	1.17
Total net earnings per share - basic	13.88	6.83	7.93
Average shares outstanding — basic	2,533.5	2,625.2	2,632.1
Potential shares exercisable under stock option plans	94.1	140.1	138.0
Less: shares repurchased under treasury stock method	(67.2)	(101.4)	(96.1)
Adjusted average shares outstanding — diluted	2,560.4	2,663.9	2,674.0
Diluted net earnings per share from continuing operations	5.20	6.14	6.66
Diluted net earnings per share from discontinuing operations	8.52	0.59	1.15
Total net earnings per share - diluted	$13.72	6.73	7.81

The diluted net earnings per share calculation for fiscal year 2023 excluded 43 million shares related to stock options, as the exercise price of these options was greater than the average market value of the Company's stock.

The diluted net earnings per share calculation for the fiscal years 2022 and 2021 included all shares related to stock options, as the exercise price of these options was less than the average market value of the Company's stock.

16. Common stock, stock option plans and stock compensation agreements

At December 31, 2023, the Company had one stock-based compensation plan. The shares outstanding are for contracts under the Company's 2012 Long-Term Incentive Plan and the 2022 Long-Term Incentive Plan. The 2012 Long-Term Incentive Plan expired on April 26, 2022. All awards (stock options, restricted shares units and performance share units) granted subsequent to that date were under the 2022 Long-Term Incentive Plan. Under the 2022 Long-Term Incentive Plan, the Company may issue up to 150 million shares of common stock, of which up to 110 million shares of common stock may be issued subject to stock options or stock appreciation rights and up to 40 million shares of common stock may be issued subject to full value awards. Awards will generally be counted on a 1-for-1 basis against the share reserve, provided that if more than 40 million full value awards are granted, each full value award in excess of 40 million will be counted on a 5-for-1 basis against the share reserve. Shares available for future grants under the 2022 Long-Term Incentive Plan were 130 million at the end of fiscal year 2023.

The compensation cost that has been charged against income for these plans was $1,087 million, $1,028 million and $1,038 million for fiscal years 2023, 2022 and 2021, respectively. The total income tax benefit recognized in the income statement for share-based compensation costs was $221 million, $177 million and $199 million for fiscal years 2023, 2022 and 2021, respectively. The Company also recognized additional income tax benefits of $126 million, $267 million and $213 million for fiscal years 2023, 2022 and 2021, respectively, for which options were exercised or restricted shares were vested. The total unrecognized compensation cost was $907 million, $866 million and $775 million for fiscal years 2023, 2022 and 2021, respectively. The weighted average period for this cost to be recognized was 1.80 years, 1.80 years and 1.78 years for fiscal years 2023, 2022, and 2021, respectively. Share-based compensation costs capitalized as part of inventory were insignificant in all periods.

The Company settles employee benefit equity issuances with treasury shares. Treasury shares are replenished through market purchases throughout the year for the number of shares used to settle employee benefit equity issuances.

Stock options

Stock options expire 10 years from the date of grant and vest over service periods that range from 6 months to 4 years. Options granted under the 2012 Long-Term Incentive Plan were granted at the average of the high and low prices of the Company's Common Stock on the New York Stock Exchange on the date of grant. Options granted under the 2022 Long-Term incentive Plan were granted at the closing price of the Company's Common Stock on the New York Stock Exchange on the date of grant.

The fair value of each option award was estimated on the date of grant using the Black-Scholes option valuation model that uses the assumptions noted in the following table. For 2023, 2022, and 2021 grants, expected volatility represents a blended rate of 10-year weekly historical overall volatility rate, and a 5-week average implied volatility rate based on at-the-money traded Johnson & Johnson options with a life of 2 years. For all grants, historical data is used to determine the expected life of the option. The risk-free rate was based on the U.S. Treasury yield curve in effect at the time of grant.

The average fair value of options granted was $27.85, $23.23 and $20.86, in fiscal years 2023, 2022 and 2021, respectively. The fair value was estimated based on the weighted average assumptions of:

	2023	2022	2021
Risk-free rate	3.74%	1.98%	0.83%
Expected volatility	17.69%	18.00%	18.59%
Expected life (in years)	7.0	7.0	7.0
Expected dividend yield	2.90%	2.70%	2.50%

A summary of option activity under the Plan as of December 31, 2023, is presented below:

(Shares in Thousands)	Outstanding Shares	Weighted Average Exercise Price	Aggregate Intrinsic Value (Dollars in Millions)
Shares at January 1, 2023	118,672	$134.95	$4,949
Options granted	16,320	162.75	
Options exercised	(12,386)	109.48	
Options canceled/forfeited*	(10,368)	155.62	
Shares at December 31, 2023	**112,238**	**$139.88**	**$2,239**

The total intrinsic value of options exercised was $729 million, $1,228 million and $919 million in fiscal years 2023, 2022 and 2021, respectively.

*includes 7,689 shares of options cancelled as a result of the conversion of Johnson & Johnson stock options held by Kenvue employees into Kenvue stock options

The following table summarizes stock options outstanding and exercisable at December 31, 2023:

(Shares in Thousands)	Outstanding			Exercisable	
Exercise Price Range	Options	Average Life[1]	Weighted Average Exercise Price	Options	Weighted Average Exercise Price
$90.44 - $101.87	20,774	1.4	$99.21	20,774	$99.21
$115.67 - $129.51	19,368	3.6	122.49	19,368	122.49
$131.94 - $151.41	27,391	5.6	142.84	26,676	142.61
$162.70 - $162.75	13,928	9.1	162.75	6	162.75
$164.62 - $165.89	30,777	7.6	165.29	174	165.12
	112,238	**5.5**	**$139.88**	**66,998**	**$123.39**

[1] Average contractual life remaining in years.

Stock options outstanding at January 1, 2023 and January 2, 2022 were 118,672 and an average life of 5.8 years and 117,361 and an average life of 5.8 years, respectively. Stock options exercisable at January 1, 2023 and January 2, 2022 were 63,661 at an average price of $113.06 and 62,742 at an average price of $104.42, respectively.

Restricted share units and performance share units

The Company grants restricted share units which vest over service periods that range from 6 months to 3 years. The Company also grants performance share units, which are paid in shares of Johnson & Johnson Common Stock after the end of a three-year performance period. Performance shares were granted with two equally-weighted goals that directly align with or help drive long-term total shareholder return: adjusted operational earnings per share and relative total shareholder return. The number of shares actually earned at the end of the three-year period will vary, based only on actual performance, from 0% to 200% of the target number of performance share units granted.

A summary of the restricted share units and performance share units activity under the Plans as of December 31, 2023 is presented below:

(Shares in Thousands)	Outstanding Restricted Share Units	Outstanding Performance Share Units
Shares at January 1, 2023	13,616	2,357
Granted	5,910	828
Issued	(4,329)	(785)
Canceled/forfeited/adjusted*	(2,259)	(363)
Shares at December 31, 2023	12,938	2,037

*includes 1,421 shares of restricted share units and 264 shares of performance share units cancelled as a result of the conversion of Johnson & Johnson restricted share units and performance share units held by Kenvue employees into Kenvue restricted share units

The average fair value of the restricted share units granted was $152.63, $153.67 and $152.62 in fiscal years 2023, 2022 and 2021, respectively, using the fair market value at the date of grant. The fair value of restricted share units was discounted for dividends, which are not paid on the restricted share units during the vesting period. The fair value of restricted share units issued was $605 million, $591 million and $611 million in 2023, 2022 and 2021, respectively.

The weighted average fair value of the performance share units granted was $145.17, $170.46 and $179.35 in fiscal years 2023, 2022 and 2021, calculated using the weighted average fair market value for each of the component goals at the date of grant.

The fair values for the earnings per share goals of each performance share unit were estimated on the date of grant using the fair market value of the shares at the time of the award discounted for dividends, which are not paid on the performance share units during the vesting period. The fair value for the relative total shareholder return goal of each performance share unit was estimated on the date of grant using the Monte Carlo valuation model. The fair value of performance share units issued was $140 million, $94 million and $83 million in fiscal years 2023, 2022 and 2021, respectively.

17. Segments of business and geographic areas

Following the separation of the Consumer Health business in the fiscal third quarter of 2023, the Company is now organized into two business segments: Innovative Medicine (formerly referred to as Pharmaceutical) and MedTech. The segment results have been recast for all periods to reflect the continuing operations of the Company.

See Note 1 for a description of the segments in which the Company operates.

Export sales are not significant. In fiscal year 2023, the Company utilized three wholesalers distributing products for both segments that represented approximately 18.2%, 15.1% and 14.2% of the total consolidated revenues. In fiscal year 2022, the Company had three wholesalers distributing products for both segments that represented approximately 18.9%, 15.0% and 13.8% of the total consolidated revenues. In fiscal year 2021, the Company had three wholesalers distributing products for all three segments that represented approximately 16.6%, 12.6%, and 12.6% of the total consolidated revenues.

(1) Amounts not allocated to segments include interest (income)/expense and general corporate (income)/expense. Fiscal 2023 includes an approximately $7 billion charge related to talc matters (See Note 19, Legal proceedings, for additional details) and $0.4 billion related to the unfavorable change in the fair value of the retained stake in Kenvue.

(2) General corporate includes cash, cash equivalents and marketable securities.

(3) Innovative Medicine includes:

- One-time COVID-19 Vaccine manufacturing exit related costs of $0.7 billion
- A restructuring related charge of $0.5 billion
- Unfavorable changes in the fair value of securities of $0.4 billion
- Favorable litigation related items of $0.1 billion
- Loss on divestiture $0.2 billion.
- An intangible asset impairment charge of approximately $0.2 billion related to market dynamics associated with a non-strategic asset (M710) acquired as part of the acquisition of Momenta Pharmaceuticals in 2020.

MedTech includes:

- Acquired in process research and development asset of $0.4 billion related to the Laminar acquisition in 2023
- A restructuring related charge of $0.3 billion
- Acquisition and integration related costs of $0.2 billion primarily related to the acquisition of Abiomed
- A Medical Device Regulation charge of $0.3 billion
- Income from litigation settlements of $0.1 billion

(4) Innovative Medicine includes:

- One-time COVID-19 Vaccine manufacturing exit related costs of $1.5 billion
- An intangible asset impairment charge of approximately $0.8 billion related to an in-process research and development asset, bermekimab (JnJ-77474462), an investigational drug for the treatment of Atopic Dermatitis (AD) and Hidradenitis Suppurativa (HS) acquired with the acquisition of XBiotech, Inc. in the fiscal year 2020. Additional information regarding efficacy of the AD and HS indications became available which led the Company to the decision to terminate the development of bermekimab for AD and HS
- Litigation expense of $0.1 billion
- Unfavorable changes in the fair value of securities of $0.7 billion
- A restructuring related charge of $0.1 billion

MedTech includes:

- Litigation expense of $0.6 billion primarily for pelvic mesh related costs
- A restructuring related charge of $0.3 billion
- Acquisition and integration related costs of $0.3 billion primarily related to the acquisition of Abiomed
- A Medical Device Regulation charge of $0.3 billion

(5) Innovative Medicine includes:

- Litigation expense of $0.6 billion, primarily related to Risperdal Gynecomastia
- Divestiture gains of $0.6 billion
- Gains of $0.5 billion related to the change in the fair value of securities
- A restructuring related charge of $0.1 billion

MedTech includes:

- An in-process research and development expense of $0.9 billion related to Ottava
- A restructuring related charge of $0.3 billion
- A Medical Device Regulation charge of $0.2 billion

- Litigation expense of $0.1 billion

(6) Long-lived assets include property, plant and equipment, net for fiscal years 2023, and 2022 of $19,898 and $17,982, respectively, and intangible assets and goodwill, net for fiscal years 2023 and 2022 of $70,733 and $74,536, respectively.

18. Acquisitions and divestitures

In the fiscal first quarter of 2024, the Company announced it has entered into a definitive agreement to acquire Ambrx Biopharma, Inc., or Ambrx (Nasdaq: AMAM), a clinical-stage biopharmaceutical company with a proprietary synthetic biology technology platform to design and develop next-generation antibody drug conjugates (ADCs), in an all-cash merger transaction for a total equity value of approximately $2.0 billion, or $1.9 billion net of estimated cash acquired. The Company will acquire all of the outstanding shares of Ambrx's common stock for $28.00 per share through a merger of Ambrx with a subsidiary of the Company. The closing of the transaction is expected to occur in the first half of 2024, subject to receipt of Ambrx shareholder approval, as well as clearance under the Hart-Scott-Rodino Antitrust Improvements Act and other customary closing conditions. The Company expects that the transaction will be accounted for as a business combination and the results of operations will be included in the Innovative Medicine segment as of the acquisition date.

During the fiscal year 2023, the Company did not make any acquisitions that qualified as a business combination.

During the fiscal year 2023, there were asset acquisitions of in-process research and development of approximately $0.5 billion in cash, primarily consisting of the acquisition of Laminar Inc. for $0.4 billion which was closed on November 30, 2023. Laminar Inc. is a privately-held medical device company focused on eliminating the left atrial appendage (LAA) in patients with non-valvular atrial fibrillation (AFib).

During the fiscal year 2022, certain businesses were acquired for $17.7 billion in cash and $1.1 billion of liabilities assumed. These acquisitions were accounted for using the acquisition method and, accordingly, results of operations have been included in the financial statements from their respective dates of acquisition.

The excess of purchase price over the estimated fair value of tangible assets acquired amounted to $17.3 billion and has been assigned to identifiable intangible assets, with any residual recorded to goodwill.

The fiscal year 2022 acquisitions primarily included Abiomed, Inc. (Abiomed). The remaining acquisitions were not material.

On December 22, 2022, the Company completed the acquisition of Abiomed, a leading, first-to-market provider of cardiovascular medical technology with a first-in-kind portfolio for the treatment of coronary artery disease and heart failure which also has an extensive innovation pipeline of life-saving technologies. The transaction broadens the Company's position as a growing cardiovascular innovator, advancing the standard of care in heart failure and recovery, one of healthcare's largest areas of unmet need. The transaction was accounted for as a business combination and the results of operations were included in the MedTech segment as of the date of the acquisition. The acquisition was completed through a tender offer for all outstanding shares. The consideration paid in the acquisition consisted of an upfront payment of $380.00 per share in cash, amounting to $17.1 billion, net of cash acquired, as well as a non-tradeable contingent value right ("CVR") entitling the holder to receive up to $35.00 per share in cash (which with respect to the CVRs total approximately $1.6 billion in the aggregate) if certain commercial and clinical milestones are achieved. The corresponding enterprise value (without taking into account the CVRs) of approximately $16.5 billion includes cash, cash equivalents and marketable securities acquired.

The milestones of the CVR consist of:

a. $17.50 per share, payable if net sales for Abiomed products exceeds $3.7 billion during Johnson & Johnson's fiscal second quarter of 2027 through fiscal first quarter of 2028, or if this threshold is not met during this period and is subsequently met during any rolling four quarter period up to the end of Johnson & Johnson's fiscal first quarter of 2029, $8.75 per share;

b. $7.50 per share payable upon FDA premarket application approval of the use of Impella® products in ST-elevated myocardial infarction (STEMI) patients without cardiogenic shock by January 1, 2028; and

c. $10.00 per share payable upon the first publication of a Class I recommendation for the use of Impella® products in high risk PCI or STEMI with or without cardiogenic shock within four years from their respective clinical endpoint publication dates, but in all cases no later than December 31, 2029.

During the fiscal fourth quarter of 2023, the Company finalized the purchase price allocation. In the fiscal 2023, there were purchase price allocation adjustments netting to approximately $0.2 billion with an offsetting increase to goodwill. The fair value of the acquisition was allocated to assets acquired of $20.1 billion (net of $0.3 billion cash acquired), primarily to goodwill for $11.1 billion, amortizable intangible assets for $6.6 billion, IPR&D for $1.1 billion, marketable securities of $0.6 billion and

liabilities assumed of $3.0 billion, which includes the fair value of the contingent consideration mentioned above for $0.7 billion and deferred taxes of $2.0 billion. The goodwill is primarily attributable to the commercial acceleration and expansion of the portfolio and is not expected to be deductible for tax purposes. The contingent consideration was recorded in Other Liabilities and adjusted to fair value through the fiscal year end 2023 on the Consolidated Balance Sheet.

The amortizable intangible assets were primarily comprised of already in-market products of the Impella® platform with an average weighted life of 14 years. The IPR&D assets were valued for technology programs for unapproved products. The value of the IPR&D was calculated using probability-adjusted cash flow projections discounted for the risk inherent in such projects. The probability of success factor ranged from 52% to 70%. The discount rate applied was 9.5%.

In 2023, the Company recorded acquisition related costs before tax of approximately $0.2 billion, which was primarily recorded in Other (income)/expense. In 2022, the Company recorded acquisition related costs before tax of approximately $0.3 billion, which was recorded in Other (income)/expense.

During fiscal year 2021, the Company did not make any material acquisitions that qualified as a business combination.

In accordance with U.S. GAAP standards related to business combinations, and goodwill and other intangible assets, supplemental pro forma information for fiscal years 2023, 2022 and 2021 is not provided, as the impact of the aforementioned acquisitions did not have a material effect on the Company's results of operations.

Divestitures

During the fiscal year 2023, the Company executed divestitures resulting in approximately $0.2 billion in proceeds resulting in gains or losses that were not material. At fiscal year end 2023, the Company held assets, primarily intangibles, on its Consolidated Balance Sheet that it expects to divest of approximately $0.3 billion primarily related to Acclarent and Ponvory.

During fiscal year 2022, the Company did not make any material divestitures.

During fiscal year 2021, in separate transactions, the Company divested two brands outside the U.S. within the Innovative Medicine segment. The Company recognized a pre-tax gain recorded in Other (income) expense, net, of approximately $0.6 billion.

19. Legal proceedings

Johnson & Johnson and certain of its subsidiaries are involved in various lawsuits and claims regarding product liability; intellectual property; commercial; indemnification and other matters; governmental investigations; and other legal proceedings that arise from time to time in the ordinary course of their business.

The Company records accruals for loss contingencies associated with these legal matters when it is probable that a liability will be incurred, and the amount of the loss can be reasonably estimated. As of December 31, 2023, the Company has determined that the liabilities associated with certain litigation matters are probable and can be reasonably estimated. The Company has accrued for these matters and will continue to monitor each related legal issue and adjust accruals as might be warranted based on new information and further developments in accordance with ASC 450-20-25, Contingencies. For these and other litigation and regulatory matters discussed below for which a loss is probable or reasonably possible, the Company is unable to estimate the possible loss or range of loss beyond the amounts accrued. Amounts accrued for legal contingencies often result from a complex series of judgments about future events and uncertainties that rely heavily on estimates and assumptions including timing of related payments. The ability to make such estimates and judgments can be affected by various factors including, among other things, whether damages sought in the proceedings are unsubstantiated or indeterminate; scientific and legal discovery has not commenced or is not complete; proceedings are in early stages; matters present legal uncertainties; there are significant facts in dispute; procedural or jurisdictional issues; the uncertainty and unpredictability of the number of potential claims; ability to achieve comprehensive multi-party settlements; complexity of related cross-claims and counterclaims; and/or there are numerous parties involved. To the extent adverse awards, judgments or verdicts have been rendered against the Company, the Company does not record an accrual until a loss is determined to be probable and can be reasonably estimated.

In the Company's opinion, based on its examination of these matters, its experience to date and discussions with counsel, the ultimate outcome of legal proceedings, net of liabilities accrued in the Company's balance sheet, is not expected to have a material adverse effect on the Company's financial position. However, the resolution of, or increase in accruals for, one or more of these matters in any reporting period may have a material adverse effect on the Company's results of operations and cash flows for that period.

Matters concerning talc

A significant number of personal injury claims alleging that talc causes cancer have been asserted against Johnson & Johnson Consumer Inc., its successor LTL Management LLC (now known as LLT Management LLC) and the Company arising out of the use of body powders containing talc, primarily JOHNSON'S Baby Powder.

In talc cases that previously have gone to trial, the Company has obtained a number of defense verdicts, but there also have been verdicts against the Company, many of which have been reversed on appeal. In June 2020, the Missouri Court of Appeals reversed in part and affirmed in part a July 2018 verdict of $4.7 billion in Ingham v. Johnson & Johnson, et al., No. ED 207476 (Mo. App.), reducing the overall award to $2.1 billion. An application for transfer of the case to the Missouri Supreme Court was subsequently denied and in June 2021, a petition for certiorari, seeking a review of the Ingham decision by the United States Supreme Court, was denied. In June 2021, the Company paid the award, which, including interest, totaled approximately $2.5 billion. The facts and circumstances, including the terms of the award, were unique to the Ingham decision and not representative of other claims brought against the Company. The Company continues to believe that it has strong legal grounds to contest the other talc verdicts that it has appealed. Notwithstanding the Company's confidence in the safety of its talc products, in certain circumstances the Company has settled cases.

In October 2021, Johnson & Johnson Consumer Inc. (Old JJCI) implemented a corporate restructuring (the 2021 Corporate Restructuring). As a result of that restructuring, Old JJCI ceased to exist and three new entities were created: (a) LTL Management LLC, a North Carolina limited liability company (LTL or Debtor); (b) Royalty A&M LLC, a North Carolina limited liability company and a direct subsidiary of LTL (RAM); and (c) the Debtor's direct parent, Johnson & Johnson Consumer Inc., a New Jersey company (New JJCI). The Debtor received certain of Old JJCI's assets and became solely responsible for the talc-related liabilities of Old JJCI, including all liabilities related in any way to injury or damage, or alleged injury or damage, sustained or incurred in the purchase or use of, or exposure to, talc, including talc contained in any product, or to the risk of, or responsibility for, any such damage or injury, except for any liabilities for which the exclusive remedy is provided under a workers' compensation statute or act (the Talc-Related Liabilities).

In October 2021, notwithstanding the Company's confidence in the safety of its talc products, the Debtor filed a voluntary petition with the United States Bankruptcy Court for the Western District of North Carolina, Charlotte Division, seeking relief under chapter 11 of the Bankruptcy Code (the LTL Bankruptcy Case). All litigation against LTL, Old JJCI, New JJCI, the Company, other of their corporate affiliates, identified retailers, insurance companies, and certain other parties (the Protected Parties) was stayed, although LTL did agree to lift the stay on a small number of appeals where appeal bonds had been filed. The LTL Bankruptcy Case was transferred to the United States Bankruptcy Court for the District of New Jersey. Claimants filed motions to dismiss the LTL Bankruptcy Case and, following a multiple day hearing, the New Jersey Bankruptcy Court denied those motions in March 2022.

The claimants subsequently filed notices of appeal as to the denial of the motions to dismiss the LTL Bankruptcy Case and the extension of the stay to the Protected Parties. On January 30, 2023, the Third Circuit reversed the Bankruptcy Court's ruling and remanded to the Bankruptcy Court to dismiss the LTL bankruptcy.

LTL filed a petition for rehearing of the Third Circuit's decision, which was denied in March 2023. LTL subsequently filed a motion in the Third Circuit to stay the mandate directing the New Jersey Bankruptcy Court to dismiss the LTL bankruptcy pending filing and disposition of a petition for writ of certiorari to the United States Supreme Court. The Third Circuit denied the motion to stay the mandate and issued the mandate.

In April 2023, the New Jersey Bankruptcy Court dismissed the LTL Bankruptcy Case, effectively lifting the stay as to all parties and returning the talc litigation to the tort system. LTL re-filed in the United States Bankruptcy Court for the District of New Jersey seeking relief under chapter 11 of the Bankruptcy Code (the LTL 2 Bankruptcy Case). As a result of the new filing, all talc claims against LTL were again automatically stayed pursuant to section 362 of the Bankruptcy Code. Additionally, the New Jersey Bankruptcy Court issued a temporary restraining order staying all litigation as to LTL, Old JJCI, New JJCI, the Company, identified retailers, and certain other parties (the New Protected Parties).

Also in April 2023, the New Jersey Bankruptcy Court issued a decision that granted limited injunctive relief to the Company and the New Protected Parties (the LTL 2 Preliminary Injunction). The LTL 2 Preliminary Injunction remained in force until late August 2023, following the Bankruptcy Court's extension of the initial LTL 2 Preliminary Injunction in June 2023. Under the LTL 2 Preliminary Injunction, except for in those cases filed in the federal court ovarian cancer multi-district litigation, discovery in all personal injury and wrongful death matters was permitted to proceed.

Furthermore, in April 2023, the Talc Claimants' Committee filed a motion to dismiss the LTL 2 Bankruptcy followed by similar motions from other claimants. Hearings on the motions to dismiss occurred in June 2023. On July 28, 2023, the court dismissed the LTL 2 Bankruptcy case and, the same day, the Company stated its intent to appeal the decision and to continue its efforts to obtain a resolution of the talc claims. In September 2023, the Bankruptcy Court entered an order granting LTL leave to seek a direct appeal to the Third Circuit Court of Appeals. In October 2023, the Third Circuit granted LTL's petition for a direct appeal. Briefing is ongoing.

Following the dismissal of LTL 2, new lawsuits were filed and cases across the country that had been stayed were reactivated. The majority of the cases are pending in federal court, organized in a multi-district litigation (MDL) in the United States District Court for the District of New Jersey. In the MDL, case-specific discovery is proceeding with an expectation that a trial will occur in early 2025. Separately, discovery and pre-trial activity is underway in various individually filed and set cases around the country, with most activity for such cases centralized in New Jersey and California.

In the original bankruptcy case, the Company agreed to provide funding to LTL for the payment of amounts the New Jersey Bankruptcy Court determines are owed by LTL and the establishment of a $2 billion trust in furtherance of this purpose. The Company established a reserve for approximately $2 billion in connection with the aforementioned trust. During the bankruptcy proceedings LTL had been de-consolidated by the Company. In the LTL 2 Bankruptcy Case, the Company had agreed to contribute an additional amount which, when added to the prior $2 billion, would be a total reserve of approximately $9 billion payable over 25 years (nominal value approximately $12 billion discounted at a rate of 4.41%), to resolve all the current and future talc claims. The approximate $9 billion reserve encompasses actual and contemplated settlements, of which approximately one-third is recorded as a current liability. The recorded amount remains the Company's best estimate of probable loss after the dismissal.

The parties have not yet reached a resolution of all talc matters and the Company is unable to estimate the possible loss or range of loss beyond the amount accrued.

A class action advancing claims relating to industrial talc was filed against the Company and others in New Jersey state court in May 2022 (the Edley Class Action). The Edley Class Action asserts, among other things, that the Company fraudulently defended past asbestos personal injury lawsuits arising from exposure to industrial talc mined, milled, and manufactured before January 6, 1989 by the Company's then wholly owned subsidiary, Windsor Minerals, Inc., which is currently a debtor in the Imerys Bankruptcy described hereafter. The Company removed the Edley Class Action to federal court in the District of New Jersey. In October 2022, the Company filed motions to dismiss and to deny certification of a class to pursue the Edley Class Action in the New Jersey District Court. Argument on the motions was heard in November 2023. Thereafter, the Company resolved this matter.

In February 2019, the Company's talc supplier, Imerys Talc America, Inc. and two of its affiliates, Imerys Talc Vermont, Inc. and Imerys Talc Canada, Inc. (collectively, Imerys) filed a voluntary petition for relief under chapter 11 of the United States Code (the Bankruptcy Code) in the United States Bankruptcy Court for the District of Delaware (Imerys Bankruptcy). The Imerys Bankruptcy relates to Imerys's potential liability for personal injury from exposure to talcum powder sold by Imerys. In its bankruptcy, Imerys alleges it has claims against the Company for indemnification and rights to joint insurance proceeds. In its bankruptcy, Imerys proposed a chapter 11 plan (the Imerys Plan) that contemplated all talc-related claims against it being channeled to a trust along with its alleged indemnification rights against the Company. Following confirmation and consummation of the plan, the trust would pay talc claims pursuant to proposed trust distribution procedures (the TDP) and then seek indemnification from the Company.

In February 2021, Cyprus Mines Corporation (Cyprus), which had owned certain Imerys talc mines, filed a voluntary petition for relief under chapter 11 of the Bankruptcy Code and filed its Disclosure Statement and Plan (the Cyprus Plan). The Cyprus Plan contemplates a settlement with Imerys and talc claimants where Cyprus would make a monetary contribution to a trust established under the Imerys Plan in exchange for an injunction against talc claims asserted against it and certain affiliated parties.

The Imerys Plan proceeded to solicitation in early 2021. However, the Imerys Plan did not receive the requisite number of votes to be confirmed after the Bankruptcy Court ruled certain votes cast in favor of the Imerys Plan should be disregarded. Imerys subsequently canceled its confirmation hearing.

Imerys, the Imerys Tort Claimants' Committee, and the Imerys Future Claimants' Representative, along with Cyprus, the Cyprus Tort Claimants' Committee, and the Cyprus Future Claimants' Representative (collectively the Mediation Parties) have been engaged in mediation since shortly after the confirmation hearing was canceled in October 2021. In September 2023, the Bankruptcy Court entered an order extending the term of the mediation among the Mediation Parties through the end of December 2023. The Bankruptcy Court also authorized Imerys and Cyprus to proceed with mediation with certain of their insurers through the end of December 2023.

In September 2023, Imerys and Cyprus filed amended plans of reorganization. The amended plans contemplate a similar construct as the prior Imerys and Cyprus Plans, including all talc claims against Imerys and Cyprus (and certain other protected parties) being channeled to a trust along with Imerys's and Cyprus's alleged indemnification rights against the Company. In January 2024, Imerys and Cyprus filed revised TDP. In February 2024, Imerys and Cyprus filed certain motions related to their Disclosure Statement.

In February 2018, a securities class action lawsuit was filed against the Company and certain named officers in the United States District Court for the District of New Jersey, alleging that the Company violated the federal securities laws by failing to disclose alleged asbestos contamination in body powders containing talc, primarily JOHNSON'S Baby Powder, and that purchasers of the Company's shares suffered losses as a result. In April 2019, the Company moved to dismiss the complaint. In

December 2019, the Court denied, in part, the motion to dismiss. In April 2021, briefing on Plaintiff's motion for class certification was completed. The case was stayed in May 2022 pursuant to the LTL Bankruptcy Case and was reopened in May 2023. In December 2023, the Court granted Plaintiff's motion for class certification. In January 2024, Defendants filed a petition with the Third Circuit under Federal Rule of Civil Procedure 23(f) for permission to appeal the Court's order granting class certification. Fact discovery is proceeding.

A lawsuit was brought against the Company in the Superior Court of California for the County of San Diego alleging violations of California's Consumer Legal Remedies Act (CLRA) relating to JOHNSON'S Baby Powder. In that lawsuit, the plaintiffs allege that the Company violated the CLRA by failing to provide required Proposition 65 warnings. In July 2019, the Company filed a notice of removal to the United States District Court for the Southern District of California and plaintiffs filed a second amended complaint shortly thereafter. In October 2019, the Company moved to dismiss the second amended complaint for failure to state a claim upon which relief may be granted. In response to those motions, plaintiffs filed a third amended complaint. In December 2019, the Company moved to dismiss the third amended complaint for failure to state a claim upon which relief may be granted. In April 2020, the Court granted the motion to dismiss but granted leave to amend. In May 2020, plaintiffs filed a Fourth Amended Complaint but indicated that they would be filing a motion for leave to file a fifth amended complaint. Plaintiffs filed a Fifth Amended Complaint in August 2020. The Company moved to dismiss the Fifth Amended Complaint for failure to state a claim upon which relief may be granted. In January 2021, the Court issued an Order and opinion ruling in the Company's favor and granting the motion to dismiss with prejudice. In February 2021, Plaintiffs filed a Notice of Appeal with the Ninth Circuit. Plaintiffs filed their opening brief in July 2021. The company filed its responsive brief in October 2021. After the Notice of Suggestion of Bankruptcy was filed with the Ninth Circuit, a stay was imposed, and the Court held the reply deadline in abeyance. In September 2023, the stay lifted. With briefing complete, the Court is expected to either schedule oral argument or issue its decision at any time.

In June 2014, the Mississippi Attorney General filed a complaint in Chancery Court of The First Judicial District of Hinds County, Mississippi against the Company and Johnson & Johnson Consumer Companies, Inc. (now known as Johnson & Johnson Consumer Inc.) (collectively, JJCI). The complaint alleges that JJCI violated the Mississippi Consumer Protection Act by failing to disclose alleged health risks associated with female consumers' use of talc contained in JOHNSON'S Baby Powder and JOHNSON'S Shower to Shower (a product divested in 2012) and seeks injunctive and monetary relief. In February 2022, the trial court set the case for trial to begin in February 2023. However, in October 2022, the LTL bankruptcy court issued an order staying the case. In March 2023, the Third Circuit issued the mandate to dismiss the LTL Bankruptcy Case and in April 2023, the New Jersey Bankruptcy Court dismissed the LTL Bankruptcy Case, effectively lifting the stay as to this matter. The State requested a new trial setting. Later in April 2023, the trial court set a new trial date for April 2024. The Company filed summary judgment and Daubert motions. The State filed a limited Daubert motion. The parties agreed to the Court's request for mediation. A pretrial conference is set for February 2024 and trial is scheduled for April 2024. However, the Company is actively engaged in resolution discussions concerning this matter.

In January 2020, the State of New Mexico filed a consumer protection case alleging that the Company deceptively marketed and sold its talcum powder products by making misrepresentations about the safety of the products and the presence of carcinogens, including asbestos. In March 2022, the New Mexico court denied the Company's motion to compel the State of New Mexico to engage in discovery of state agencies and denied the Company's request for interlocutory appeal of that decision. The Company then filed a Petition for Writ of Superintending Control and a Request for a Stay to the New Mexico Supreme Court on the issue of the State of New Mexico's discovery obligations. In April 2022, in view of the efforts to resolve talc-related claims in the LTL Bankruptcy Case, the Company and the State agreed to a 60-day stay of all matters except for the pending writ before the New Mexico Supreme Court, which expired in June 2022. Thereafter, the Company moved to enjoin prosecution of the case in the LTL Bankruptcy Case. In October 2022, the bankruptcy court issued an order staying the case. In December 2022, the State filed an appeal to the Third Circuit concerning the stay order. Separately, in September 2022, the New Mexico Supreme Court granted the Company's request for a stay pending further briefing on the scope of the State of New Mexico's discovery obligations. In March 2023, the Third Circuit issued the mandate to dismiss the LTL Bankruptcy Case and in April 2023, the New Jersey Bankruptcy Court dismissed the LTL Bankruptcy Case, effectively lifting the stay as to this matter. While the State notified the New Mexico Supreme Court of the lifted stay of litigation in April 2023, the Court has not taken any action since being notified of the lifting of the stay and it remains in effect.

Forty-two states and the District of Columbia (including Mississippi and New Mexico) have commenced a joint investigation into the Company's marketing of its talcum powder products. At this time, the multi-state group has not asserted any claims against the Company. Five states have issued Civil Investigative Demands seeking documents and other information. The Company has produced documents to Arizona, North Carolina, Texas, and Washington and entered into confidentiality agreements. The Company has not received any follow up requests from those states. In March 2022, each of the forty-two states agreed to mediation of their claims in the LTL Bankruptcy Case. In July 2022, New Mexico and Mississippi indicated they would no longer voluntarily submit to further mediation in the LTL Bankruptcy and would proceed with their respective cases in state court. In March 2023, the mediation was terminated. In January 2024, the Company reached an agreement in principle with the multi-state group of state Attorneys General, subject to ongoing negotiation of non-monetary terms. The unique procedural history and status of the New Mexico and Mississippi matters specifically have been discussed above.

In addition, the Company has received inquiries, subpoenas, and requests to produce documents regarding talc matters and the LTL Bankruptcy Case from various governmental authorities. The Company has produced documents and responded to inquiries, and will continue to cooperate with government inquiries.

Matters concerning opioids

Beginning in 2014 and continuing to the present, the Company and Janssen Pharmaceuticals, Inc. (JPI), along with other pharmaceutical companies, have been named in close to 3,500 lawsuits related to the marketing of opioids, including DURAGESIC, NUCYNTA and NUCYNTA ER. The majority of the cases have been filed by state and local governments. Similar lawsuits have also been filed by private plaintiffs and organizations, including but not limited to the following: individual plaintiffs on behalf of children born with Neonatal Abstinence Syndrome (NAS); hospitals; and health insurers/payors.

To date, the Company and JPI have litigated two of the cases to judgment and have prevailed in both, either at trial or on appeal.

In October 2019, the Company announced a proposed agreement in principle with a negotiating committee of state Attorneys General to settle all remaining government opioid litigation claims nationwide. Under the final national settlement agreement, which was announced in July 2021, the Company agreed to pay up to $5.0 billion to resolve all opioid lawsuits and future opioid claims by states, cities, counties, local school districts and other special districts, and tribal governments, contingent on sufficient participation by eligible government entities, and with credits back for entities that declined or were ineligible to participate. In July 2021, the Company announced that the terms of the agreement to settle the state and subdivision claims had been finalized and approximately 60% of the all-in settlement was paid by the end of fiscal 2023. The expected payment schedule provides that approximately $0.7 billion of payments are to be paid by the end of fiscal 2024. The agreement is not an admission of liability or wrongdoing, and it provides for the release of all opioid-related claims against the Company, JPI, and their affiliates (including the Company's former subsidiaries Tasmanian Alkaloids Pty, Ltd. and Noramco, Inc.). As of January 2024, the Company and JPI have settled or otherwise resolved the opioid claims advanced by all government entity claimants except the City of Baltimore, a number of school districts and other claimants.

The Company and JPI continue to defend the cases brought by the remaining government entity litigants as well as the cases brought by private litigants, including NAS claimants, hospitals, and health insurers/payors. Counting the private litigant cases, there are approximately 35 remaining opioid cases against the Company and JPI in various state courts, 430 remaining cases in the Ohio MDL, and 4 additional cases in other federal courts. Some of these cases have been dismissed and are being appealed by the plaintiffs and certain others are scheduled for trial in 2024 or 2025.

In addition, the Province of British Columbia filed suit against the Company and its Canadian affiliate Janssen Inc., and many other industry members, in Canada, and is seeking to have that action certified as an opt in class action on behalf of other provincial/territorial and the federal governments in Canada. Additional proposed class actions have been filed in Canada against the Company and Janssen Inc., and many other industry members, by and on behalf of people who used opioids (for personal injuries), municipalities and First Nations bands. These actions allege a variety of claims related to opioid marketing practices, including false advertising, unfair competition, public nuisance, consumer fraud violations, deceptive acts and practices, false claims and unjust enrichment. An adverse judgment in any of these lawsuits could result in the imposition of large monetary penalties and significant damages including, punitive damages, cost of abatement, substantial fines, equitable remedies and other sanctions.

From June 2017 through December 2019, the Company's Board of Directors received a series of shareholder demand letters alleging breaches of fiduciary duties related to the marketing of opioids. The Board retained independent counsel to investigate the allegations in the demands, and in April 2020, independent counsel delivered a report to the Board recommending that the Company reject the shareholder demands and take the steps that are necessary or appropriate to secure dismissal of related derivative litigation. The Board unanimously adopted the recommendations of the independent counsel's report.

In November 2019, one of the shareholders who sent a demand filed a derivative complaint against the Company as the nominal defendant and certain current and former directors and officers as defendants in the Superior Court of New Jersey. The complaint alleges breaches of fiduciary duties related to the marketing of opioids, and that the Company has suffered damages as a result of those alleged breaches. A series of additional derivative complaints making similar allegations against the same and similar defendants were filed in New Jersey state and federal courts in 2019 and 2020. By 2022, all but two state court cases had been voluntarily dismissed. In February 2022, the state court granted the Company's motion to dismiss one of the two cases, and the shareholder that brought the second case filed a notice of dismissal. The shareholder whose complaint was dismissed filed a motion for reconsideration. In May 2022, the state court held oral argument on the motion for reconsideration and subsequently denied the motion. The shareholder has appealed the state court's dismissal order.

Product liability

The Company and certain of its subsidiaries are involved in numerous product liability claims and lawsuits involving multiple products. Claimants in these cases seek substantial compensatory and, where available, punitive damages. While the Company believes it has substantial defenses, it is not feasible to predict the ultimate outcome of litigation. From time to time, even if it has substantial defenses, the Company considers isolated settlements based on a variety of circumstances. The Company has accrued for these matters and will continue to monitor each related legal issue and adjust accruals as might be warranted based on new information and further developments in accordance with ASC 450-20-25, Contingencies. The Company accrues an estimate of the legal defense costs needed to defend each matter when those costs are probable and can be reasonably estimated. For certain of these matters, the Company has accrued additional amounts such as estimated costs associated with settlements, damages and other losses. Product liability accruals can represent projected product liability for thousands of claims around the world, each in different litigation environments and with different fact patterns. Changes to the accruals may be required in the future as additional information becomes available.

The table below contains the most significant of these cases and provides the approximate number of plaintiffs in the United States with direct claims in pending lawsuits regarding injuries allegedly due to the relevant product or product category as of December 31, 2023:

Product or product category	Number of plaintiffs
Body powders containing talc, primarily JOHNSON'S Baby Powder	59,140
DePuy ASR XL Acetabular System and DePuy ASR Hip Resurfacing System	160
PINNACLE Acetabular Cup System	920
Pelvic meshes	6,720
ETHICON PHYSIOMESH Flexible Composite Mesh	370
RISPERDAL	200
ELMIRON	2,150

The number of pending lawsuits is expected to fluctuate as certain lawsuits are settled or dismissed and additional lawsuits are filed. There may be additional claims that have not yet been filed.

MedTech

DePuy ASR XL Acetabular System and ASR Hip Resurfacing System

In August 2010, DePuy Orthopaedics, Inc. (DePuy) announced a worldwide voluntary recall of its ASR XL Acetabular System and DePuy ASR Hip Resurfacing System (ASR Hip) used in hip replacement surgery. Claims for personal injury have been made against DePuy and the Company. Cases filed in federal courts in the United States have been organized as a multi-district litigation in the United States District Court for the Northern District of Ohio. Litigation has also been filed in countries outside of the United States, primarily in the United Kingdom, Canada, Australia, Ireland, Germany, India and Italy. In November 2013, DePuy reached an agreement with a Court-appointed committee of lawyers representing ASR Hip plaintiffs to establish a program to settle claims with eligible ASR Hip patients in the United States who had surgery to replace their ASR Hips, known as revision surgery, as of August 2013. DePuy reached additional agreements in February 2015 and March 2017, which further extended the settlement program to include ASR Hip patients who had revision surgeries after August 2013 and prior to February 15, 2017. This settlement program has resolved more than 10,000 claims, thereby bringing to resolution significant ASR Hip litigation activity in the United States. However, lawsuits in the United States remain, and the settlement program does not address litigation outside of the United States. In Australia, a class action settlement was reached that resolved the claims of the majority of ASR Hip patients in that country. In Canada, the Company has reached agreements to settle the class actions filed in that country. The Company continues to receive information with respect to potential additional costs associated with this recall on a worldwide basis. The Company has established accruals for the costs associated with the United States settlement program and ASR Hip-related product liability litigation.

DePuy PINNACLE Acetabular Cup System

Claims for personal injury have also been made against DePuy Orthopaedics, Inc. and the Company (collectively, DePuy) relating to the PINNACLE Acetabular Cup System used in hip replacement surgery. Product liability lawsuits continue to be filed, and the Company continues to receive information with respect to potential costs and the anticipated number of cases. Most cases filed in federal courts in the United States have been organized as a multi-district litigation in the United States

District Court for the Northern District of Texas (Texas MDL). Beginning on June 1, 2022, the Judicial Panel on Multidistrict Litigation ceased transfer of new cases into the Texas MDL, and there are now cases pending in federal court outside the Texas MDL. Litigation also has been filed in state courts and in countries outside of the United States. During the first quarter of 2019, DePuy established a United States settlement program to resolve these cases. As part of the settlement program, adverse verdicts have been settled. The Company has established an accrual for product liability litigation associated with the PINNACLE Acetabular Cup System and the related settlement program.

Ethicon Pelvic Mesh

Claims for personal injury have been made against Ethicon, Inc. (Ethicon) and the Company arising out of Ethicon's pelvic mesh devices used to treat stress urinary incontinence and pelvic organ prolapse. The Company continues to receive information with respect to potential costs and additional cases. Cases filed in federal courts in the United States had been organized as a multi-district litigation (MDL) in the United States District Court for the Southern District of West Virginia. In March 2021, the MDL Court entered an order closing the MDL. The MDL Court has remanded cases for trial to the jurisdictions where the case was originally filed and additional pelvic mesh lawsuits have been filed, and remain, outside of the MDL. The Company has settled or otherwise resolved the majority of the United States cases and the estimated costs associated with these settlements and the remaining cases are reflected in the Company's accruals. In addition, class actions and individual personal injury cases or claims seeking damages for alleged injury resulting from Ethicon's pelvic mesh devices have been commenced in various countries outside of the United States, including claims and cases in the United Kingdom, the Netherlands, Belgium, France, Ireland, Italy, Spain and Slovenia and class actions in Israel, Australia, Canada and South Africa. In November 2019, the Federal Court of Australia issued a judgment regarding its findings with respect to liability in relation to the three Lead Applicants and generally in relation to the design, manufacture, pre and post-market assessments and testing, and supply and promotion of the devices in Australia used to treat stress urinary incontinence and pelvic organ prolapse. In September 2022, after exhausting its appeals, the Company reached an in-principle agreement to resolve the two pelvic mesh class actions in Australia and in March 2023 the Federal Court approved the settlement. The class actions in Canada were discontinued in 2020 as a result of a settlement of a group of cases and an agreement to resolve the Israeli class action was reached in May 2021. The parties in the Israeli class action are currently finalizing the terms of the settlement. A motion to approve the settlement was filed with the Court. The Company has established accruals with respect to product liability litigation associated with Ethicon's pelvic mesh products.

Ethicon Physiomesh

Following a June 2016 worldwide market withdrawal of Ethicon Physiomesh Flexible Composite Mesh (Physiomesh), claims for personal injury have been made against Ethicon, Inc. (Ethicon) and the Company alleging personal injury arising out of the use of this hernia mesh device. Cases filed in federal courts in the United States have been organized as a multi-district litigation (MDL) in the United States District Court for the Northern District of Georgia. A multi-county litigation (MCL) also has been formed in New Jersey state court and assigned to Atlantic County for cases pending in New Jersey. In addition to the matters in the MDL and MCL, there are additional lawsuits pending in the United States District Court for the Southern District of Ohio, which are part of the MDL for polypropylene mesh devices manufactured by C.R. Bard, Inc., and lawsuits pending in two New Jersey MCLs formed for Proceed/Proceed Ventral Patch and Prolene Hernia systems, and lawsuits pending outside the United States. In May 2021, Ethicon and lead counsel for the plaintiffs entered into a term sheet to resolve approximately 3,600 Physiomesh cases (covering approximately 4,300 plaintiffs) pending in the MDL and MCL at that time. A master settlement agreement (MSA) was entered into in September 2021 and includes 3,729 cases in the MDL and MCL. All deadlines and trial settings in those proceedings are currently stayed pending the completion of the settlement agreement. Of the cases subject to the MSA, 3,390 have been dismissed with prejudice. Ethicon has received releases from 3,584 plaintiffs, and releases continue to be submitted as part of the settlement process. Post-settlement cases in the Physiomesh MDL and MCL are subject to docket control orders requiring early expert reports and discovery requirements. In May 2023, Ethicon entered an additional settlement to resolve the claims of 292 Physiomesh claimants. That settlement is proceeding, and releases are being returned. As of December 31, 2023, there were 5 Physiomesh cases in the MDL and 3 in the New Jersey MCL which are not included in either settlement and which remain subject to the docket control orders.

Claims have also been filed against Ethicon and the Company alleging personal injuries arising from the PROCEED Mesh and PROCEED Ventral Patch hernia mesh products. In March 2019, the New Jersey Supreme Court entered an order consolidating these cases pending in New Jersey as an MCL in Atlantic County Superior Court. Additional cases have been filed in various federal and state courts in the United States, and in jurisdictions outside the United States.

Ethicon and the Company also have been subject to claims for personal injuries arising from the PROLENE Polypropylene Hernia System. In January 2020, the New Jersey Supreme Court created an MCL in Atlantic County Superior Court to handle such cases. Cases involving this product have also been filed in other federal and state courts in the United States.

In October 2022, an agreement in principle, subject to various conditions, was reached to settle the majority of the pending cases involving Proceed, Proceed Ventral Patch, Prolene Hernia System and related multi-layered mesh products, as well as a number of unfiled claims. All litigation activities in the two New Jersey MCLs are stayed pending effectuation of the proposed settlement. Future cases that are filed in the New Jersey MCLs will be subject to docket control orders requiring early expert reports and discovery requirements.

The Company has established accruals with respect to product liability litigation associated with Ethicon Physiomesh Flexible Composite Mesh, PROCEED Mesh and PROCEED Ventral Patch, and PROLENE Polypropylene Hernia System products.

Innovative Medicine

RISPERDAL

Claims for personal injury have been made against Janssen Pharmaceuticals, Inc. and the Company arising out of the use of RISPERDAL, and related compounds, indicated for the treatment of schizophrenia, acute manic or mixed episodes associated with bipolar I disorder and irritability associated with autism. Lawsuits primarily have been filed in state courts in Pennsylvania, California, and Missouri. Other actions are pending in various courts in the United States and Canada. Product liability lawsuits continue to be filed, and the Company continues to receive information with respect to potential costs and the anticipated number of cases. The Company has successfully defended a number of these cases but there have been verdicts against the Company, including a verdict in October 2019 of $8.0 billion of punitive damages related to one plaintiff, which the trial judge reduced to $6.8 million in January 2020. In September 2021, the Company entered into a settlement in principle with the counsel representing plaintiffs in this matter and in substantially all of the outstanding cases in the United States. The costs associated with this and other settlements are reflected in the Company's accruals.

ELMIRON

Claims for personal injury have been made against a number of Johnson & Johnson companies, including Janssen Pharmaceuticals, Inc. and the Company, arising out of the use of ELMIRON, a prescription medication indicated for the relief of bladder pain or discomfort associated with interstitial cystitis. These lawsuits, which allege that ELMIRON contributes to the development of permanent retinal injury and vision loss, have been filed in both state and federal courts across the United States. In December 2020, lawsuits filed in federal courts in the United States, including putative class action cases seeking medical monitoring, were organized as a multi-district litigation in the United States District Court for the District of New Jersey. All cases in the multi-district litigation are in active discussions regarding resolution, and as a result, all activity is stayed. In addition, cases have been filed in various state courts of New Jersey, which have been coordinated in a multi-county litigation in Bergen County, as well as the Court of Common Pleas in Philadelphia, which have been coordinated and granted mass tort designation. No activity has taken place in the New Jersey state court litigation; however, three bellwether trials have been set in Philadelphia for March, April and May 2024. In addition, three class action lawsuits have been filed in Canada. Product liability lawsuits continue to be filed, and the Company continues to receive information with respect to potential costs and the anticipated number of cases. The Company has established accruals for defense and indemnity costs associated with ELMIRON related product liability litigation.

Intellectual property

Certain subsidiaries of the Company are subject, from time to time, to legal proceedings and claims related to patent, trademark and other intellectual property matters arising out of their businesses. Many of these matters involve challenges to the coverage and/or validity of the patents on various products and allegations that certain of the Company's products infringe the patents of third parties. Although these subsidiaries believe that they have substantial defenses to these challenges and allegations with respect to all significant patents, there can be no assurance as to the outcome of these matters. A loss in any of these cases could adversely affect the ability of these subsidiaries to sell their products, result in loss of sales due to loss of market exclusivity, require the payment of past damages and future royalties, and may result in a non-cash impairment charge for any associated intangible asset.

Innovative Medicine - litigation against filers of abbreviated new drug applications (ANDAs)

The Company's subsidiaries have brought lawsuits against generic companies that have filed ANDAs with the U.S. FDA (or similar lawsuits outside of the United States) seeking to market generic versions of products sold by various subsidiaries of the Company prior to expiration of the applicable patents covering those products. These lawsuits typically include allegations of non-infringement and/or invalidity of patents listed in FDA's publication "Approved Drug Products with Therapeutic Equivalence Evaluations" (commonly known as the Orange Book). In each of these lawsuits, the Company's subsidiaries are seeking an order enjoining the defendant from marketing a generic version of a product before the expiration of the relevant patents (Orange Book Listed Patents). In the event the Company's subsidiaries are not successful in an action, or any automatic statutory stay expires before the court rulings are obtained, the generic companies involved would have the ability, upon regulatory approval, to introduce generic versions of their products to the market, resulting in the potential for substantial market share and revenue losses for the applicable products, and which may result in a non-cash impairment charge in any associated intangible asset. In addition, from time to time, the Company's subsidiaries may settle these types of actions

and such settlements can involve the introduction of generic versions of the products at issue to the market prior to the expiration of the relevant patents.

The Inter Partes Review (IPR) process with the United States Patent and Trademark Office (USPTO), created under the 2011 America Invents Act, is also being used at times by generic companies in conjunction with ANDAs and lawsuits to challenge the applicable patents.

XARELTO

Beginning in March 2021, Janssen Pharmaceuticals, Inc.; Bayer Pharma AG; Bayer AG; and Bayer Intellectual Property GmbH filed patent infringement lawsuits in United States district courts against generic manufacturers who have filed ANDAs seeking approval to market generic versions of XARELTO before expiration of certain Orange Book Listed Patents. The following entities are named defendants: Dr. Reddy's Laboratories, Inc.; Dr. Reddy's Laboratories, Ltd.; Lupin Limited; Lupin Pharmaceuticals, Inc.; Taro Pharmaceutical Industries Ltd.; Taro Pharmaceuticals U.S.A., Inc.; Teva Pharmaceuticals USA, Inc.; Mylan Pharmaceuticals Inc.; Mylan Inc.; Mankind Pharma Limited; Apotex Inc.; Apotex Corp.; Auson Pharmaceuticals Inc.; Macleods Pharmaceuticals Ltd; Macleods Pharma USA, Inc.; Indoco Remedies Limited; FPP Holding Company LLC; Umedica Laboratories Pvt. Ltd.; Aurobindo Pharma Limited; Aurobindo Pharma USA, Inc.; Cipla Ltd.; Cipla USA Inc.; and InvaGen Pharmaceuticals, Inc. The following U.S. patents are included in one or more cases: 9,539,218 and 10,828,310.

U.S. Patent No. 10,828,310 was also under consideration by the USPTO in an IPR proceeding. In July 2023, the USPTO issued a final written decision finding the claims of the patent invalid. In September 2023, Bayer Pharma AG filed an appeal to the U.S. Court of Appeals for the Federal Circuit.

OPSUMIT

Beginning in January 2023 Actelion Pharmaceuticals Ltd and Actelion Pharmaceuticals US, Inc. filed patent infringement lawsuits in United States district courts against generic manufacturers who have filed ANDAs seeking approval to market generic versions of OPSUMIT before expiration of certain Orange Book Listed Patents. The following entities are named defendants: Sun Pharmaceutical Industries Limited; Sun Pharmaceutical Industries, Inc.; MSN Laboratories Private Limited; MSN Pharmaceuticals Inc.; and Mylan Pharmaceuticals Inc. The following U.S. patents are included in one or more cases: 7,094,781; and 10,946,015. In November 2023, the Company entered into a confidential settlement agreement with MSN Laboratories Private Limited and MSN Pharmaceuticals Inc. In December 2023, the Company entered into a confidential settlement agreement with Sun Pharmaceutical Industries Limited and Sun Pharmaceuticals Industries, Inc.

INVEGA SUSTENNA

Beginning in January 2018, Janssen Pharmaceutica NV and Janssen Pharmaceuticals, Inc. filed patent infringement lawsuits in United States district courts against generic manufacturers who have filed ANDAs seeking approval to market generic versions of INVEGA SUSTENNA before expiration of the Orange Book Listed Patent. The following entities are named defendants: Teva Pharmaceuticals USA, Inc.; Mylan Laboratories Limited; Pharmascience Inc.; Mallinckrodt PLC; Specgx LLC; Tolmar, Inc.; and Accord Healthcare, Inc. The following U.S. patent is included in one or more cases: 9,439,906.

Beginning in February 2018, Janssen Inc. and Janssen Pharmaceutica NV initiated a Statement of Claim under Section 6 of the Patented Medicines (Notice of Compliance) Regulations against generic manufacturers who have filed ANDSs seeking approval to market generic versions of INVEGA SUSTENNA before expiration of the listed patent. The following entities are named defendants: Pharmascience Inc. and Apotex Inc. The following Canadian patent is included in one or more cases: 2,655,335.

INVEGA TRINZA

Beginning in September 2020, Janssen Pharmaceuticals, Inc., Janssen Pharmaceutica NV, and Janssen Research & Development, LLC filed patent infringement lawsuits in United States district courts against generic manufacturers who have filed ANDAs seeking approval to market generic versions of INVEGA TRINZA before expiration of the Orange Book Listed Patent. The following entities are named defendants: Mylan Laboratories Limited; Mylan Pharmaceuticals Inc.; and Mylan Institutional LLC. The following U.S. patent is included in one or more cases: 10,143,693. In May 2023, the District Court issued a decision finding that Mylan's proposed generic product infringes the asserted patent and that the patent is not invalid. Mylan has appealed the verdict.

SYMTUZA

Beginning in November 2021, Janssen Products, L.P., Janssen Sciences Ireland Unlimited Company, Gilead Sciences, Inc. and Gilead Sciences Ireland UC filed patent infringement lawsuits in United States district courts against generic manufacturers who have filed ANDAs seeking approval to market generic versions of SYMTUZA before expiration of certain Orange Book Listed Patents. The following entities are named defendants: Lupin Limited; Lupin Pharmaceuticals, Inc.; MSN Laboratories

Private Ltd.; MSN Life Sciences Private Ltd.; MSN Pharmaceuticals Inc.; Apotex Inc.; and Apotex Corp. The following U.S. patents are included in one or more cases: 10,039,718 and 10,786,518.

ERLEADA

Beginning in May 2022, Aragon Pharmaceuticals, Inc., Janssen Biotech, Inc. (collectively, Janssen), Sloan Kettering Institute for Cancer Research (SKI) and The Regents of the University of California filed patent infringement lawsuits in United States district courts against generic manufacturers who have filed ANDAs seeking approval to market generic versions of ERLEADA before expiration of certain Orange Book Listed Patents. The following entities are named defendants: Lupin Limited; Lupin Pharmaceuticals, Inc.; Zydus Worldwide DMCC; Zydus Pharmaceuticals (USA), Inc.; Zydus Lifesciences Limited; Sandoz Inc.; Eugia Pharma Specialities Limited; Aurobindo Pharma USA, Inc.; Auromedics Pharma LLC; Hetero Labs Limited Unit V; and Hetero USA, Inc. The following U.S. patents are included in one or more cases: 9,481,663; 9,884,054; 10,052,314 (which reissued as RE49,353); 10,702,508; 10,849,888; 8,445,507; 8,802,689; 9,388,159; 9,987,261; and RE49,353. In December 2023, Janssen and SKI voluntarily dismissed their case against Lupin Limited and Lupin Pharmaceuticals, Inc.

UPTRAVI

Beginning in November 2022, Actelion Pharmaceuticals US Inc., Actelion Pharmaceuticals Ltd and Nippon Shinyaku Co., Ltd. filed patent infringement lawsuits in United States district courts against generic manufacturers who have filed ANDAs seeking approval to market generic versions of UPTRAVI intravenous before expiration of certain Orange Book Listed Patents. The following entities are named defendants: Alembic Pharmaceuticals Limited, Alembic Pharmaceuticals Inc.; Lupin Ltd.; Lupin Pharmaceuticals, Inc.; Cipla Limited; Cipla USA Inc.; MSN Laboratories Private Ltd.; and MSN Pharmaceuticals Inc. The following U.S. patents are included in one or more cases: 8,791,122 and 9,284,280. In November 2023, the Company entered into a confidential settlement agreement with Alembic Pharmaceuticals Limited and Alembic Pharmaceuticals Inc.

SPRAVATO

Beginning in May 2023, Janssen Pharmaceuticals, Inc. and Janssen Pharmaceutica NV filed patent infringement lawsuits in United States district courts against generic manufacturers who have filed ANDAs seeking approval to market generic versions of SPRAVATO before expiration of certain Orange Book Listed Patents. The following entities are named defendants: Sandoz Inc.; Hikma Pharmaceuticals Inc. USA; Hikma Pharmaceuticals PLC; and Alkem Laboratories Ltd. The following U.S. patents are included in one or more cases: 10,869,844; 11,173,134; 11,311,500; and 11,446,260.

STELARA

In November 2023, Biocon Biologics Inc. filed a Petition for Inter Partes Review with the USPTO seeking review of U.S. Patent No. 10,961,307 related to methods of treating ulcerative colitis with ustekinumab.

MedTech

In March 2016, Abiomed, Inc. (Abiomed) filed a declaratory judgment action against Maquet Cardiovascular LLC (Maquet) in U.S. District Court for the District of Massachusetts seeking a declaration that the Impella does not infringe certain Maquet patents, currently U.S. Patent Nos. 7,022,100 ('100); 8,888,728; 9,327,068; 9,545,468; 9,561,314; and 9,597,437. Maquet counterclaimed for infringement of each of those patents. After claim construction, Maquet alleged infringement of only the '100 patent. In September 2021, the court granted Abiomed's motion for summary judgment of non-infringement of the '100 patent, and in September 2023, the district court entered final judgment in favor of Abiomed on all patents-in-suit. Maquet appealed.

Government proceedings

Like other companies in the pharmaceutical and medical technologies industries, the Company and certain of its subsidiaries are subject to extensive regulation by national, state and local government agencies in the United States and other countries in which they operate. Such regulation has been the basis of government investigations and litigations. The most significant litigation brought by, and investigations conducted by, government agencies are listed below. It is possible that criminal charges and substantial fines and/or civil penalties or damages could result from government investigations or litigation.

MedTech

In July 2018, the Public Prosecution Service in Rio de Janeiro and representatives from the Brazilian antitrust authority CADE inspected the offices of more than 30 companies including Johnson & Johnson do Brasil Indústria e Comércio de Produtos para Saúde Ltda. The authorities appear to be investigating allegations of possible anti-competitive behavior and possible improper payments in the medical device industry. The Company continues to respond to inquiries regarding the Foreign

Corrupt Practices Act from the United States Department of Justice and the United States Securities and Exchange Commission.

In July 2023, the U.S. Department of Justice ("DOJ") issued Civil Investigative Demands to the Company, Johnson & Johnson Surgical Vision, Inc., and Johnson & Johnson Vision Care, Inc. (collectively, "J&J Vision") in connection with a civil investigation under the False Claims Act relating to free or discounted intraocular lenses and equipment used in eye surgery, such as phacoemulsification and laser systems. J&J Vision has begun producing documents and information responsive to the Civil Investigative Demands. J&J Vision is in ongoing discussions with the DOJ regarding its inquiry.

Innovative Medicine

In July 2016, the Company and Janssen Products, LP were served with a qui tam complaint pursuant to the False Claims Act filed in the United States District Court for the District of New Jersey alleging the off-label promotion of two HIV products, PREZISTA and INTELENCE, and anti-kickback violations in connection with the promotion of these products. The complaint was filed under seal in December 2012. The federal and state governments have declined to intervene, and the lawsuit is being prosecuted by the relators. The Court denied summary judgment on all claims in December 2021. Daubert motions were granted in part and denied in part in January 2022, and the case is proceeding to trial. Trial is scheduled for May 2024.

In March 2017, Janssen Biotech, Inc. (JBI) received a Civil Investigative Demand from the United States Department of Justice regarding a False Claims Act investigation concerning management and advisory services provided to rheumatology and gastroenterology practices that purchased REMICADE or SIMPONI ARIA. In August 2019, the United States Department of Justice notified JBI that it was closing the investigation. Subsequently, the United States District Court for the District of Massachusetts unsealed a qui tam False Claims Act complaint, which was served on the Company. The Department of Justice had declined to intervene in the qui tam lawsuit in August 2019. The Company filed a motion to dismiss, which was granted in part and denied in part. Discovery is underway.

From time to time, the Company has received requests from a variety of United States Congressional Committees to produce information relevant to ongoing congressional inquiries. It is the policy of Johnson & Johnson to cooperate with these inquiries by producing the requested information.

General litigation

The Company or its subsidiaries are also parties to various proceedings brought under the Comprehensive Environmental Response, Compensation, and Liability Act, commonly known as Superfund, and comparable state, local or foreign laws in which the primary relief sought is the Company's agreement to implement remediation activities at designated hazardous waste sites or to reimburse the government or third parties for the costs they have incurred in performing remediation as such sites.

In October 2017, certain United States service members and their families brought a complaint against a number of pharmaceutical and medical devices companies, including Johnson & Johnson and certain of its subsidiaries in United States District Court for the District of Columbia, alleging that the defendants violated the United States Anti-Terrorism Act. The complaint alleges that the defendants provided funding for terrorist organizations through their sales practices pursuant to pharmaceutical and medical device contracts with the Iraqi Ministry of Health. In July 2020, the District Court dismissed the complaint. In January 2022, the United States Court of Appeals for the District of Columbia Circuit reversed the District Court's decision. In June 2023, defendants filed a petition for a writ of certiorari to the United States Supreme Court.

In February 2024, a putative class action was filed against the Company, the Pension & Benefits Committee of Johnson & Johnson, and certain named officers and employees, in United States District Court for the District of New Jersey. The complaint alleges that defendants breached fiduciary duties under the Employee Retirement Income Security Act (ERISA) by allegedly mismanaging the Company's prescription-drug benefits program. The complaint seeks damages and other relief.

MedTech

In October 2020, Fortis Advisors LLC (Fortis), in its capacity as representative of the former stockholders of Auris Health Inc. (Auris), filed a complaint against the Company, Ethicon Inc., and certain named officers and employees (collectively, Ethicon) in the Court of Chancery of the State of Delaware. The complaint alleges breach of contract, fraud, and other causes of action against Ethicon in connection with Ethicon's acquisition of Auris in 2019. The complaint seeks damages and other relief. In December 2021, the Court granted in part and denied in part defendants' motion to dismiss certain causes of action. All claims against the individual defendants were dismissed. The trial was held in January 2024 and the decision is pending.

Innovative Medicine

In June 2019, the United States Federal Trade Commission (FTC) issued a Civil Investigative Demand to the Company and Janssen Biotech, Inc. (collectively, Janssen) in connection with its investigation of whether Janssen's REMICADE contracting practices violate federal antitrust laws. The Company has produced documents and information responsive to the Civil Investigative Demand. Janssen is in ongoing discussions with the FTC staff regarding its inquiry.

In February 2022, the United States Federal Trade Commission (FTC) issued Civil Investigative Demands to Johnson & Johnson and Janssen Biotech, Inc. (collectively, Janssen) in connection with its investigation of whether advertising practices for REMICADE violate federal law. Janssen has produced documents and information responsive to the Civil Investigative Demands. Janssen is in ongoing discussions with the FTC staff regarding the inquiry.

In June 2022, Genmab A/S filed a Notice for Arbitration with International Institute for Conflict Prevention and Resolution (CPR) against Janssen Biotech, Inc. seeking milestones and an extended royalty term for Darzalex FASPRO. In April 2023, the Arbitration Panel ruled in Janssen's favor and dismissed Genmab's claims. In January 2024, Genmab's appeal of this dismissal was denied.

In October 2018, two separate putative class actions were filed against Actelion Pharmaceutical Ltd., Actelion Pharmaceuticals U.S., Inc., and Actelion Clinical Research, Inc. (collectively Actelion) in United States District Court for the District of Maryland and United States District Court for the District of Columbia. The complaints allege that Actelion violated state and federal antitrust and unfair competition laws by allegedly refusing to supply generic pharmaceutical manufacturers with samples of TRACLEER. TRACLEER is subject to a Risk Evaluation and Mitigation Strategy required by the U.S. Food and Drug Administration, which imposes restrictions on distribution of the product. In January 2019, the plaintiffs dismissed the District of Columbia case and filed a consolidated complaint in the United States District Court for the District of Maryland.

In December 2023, a putative class action lawsuit was filed against the Company and Janssen Biotech Inc. (collectively "Janssen") in the United States District Court for the Eastern District of Virginia. The complaint alleges that Janssen violated federal and state antitrust laws and other state laws by delaying biosimilar competition with STELARA through the Janssen's enforcement of patent rights covering STELARA. The complaint seeks damages and other relief.

In June 2022, Janssen Pharmaceuticals, Inc. filed a Demand for Arbitration against Emergent Biosolutions Inc. et al. (EBSI) with the American Arbitration Association, alleging that EBSI breached the parties' Manufacturing Services Agreement for the Company's COVID-19 vaccine. In July 2022, Emergent filed its answering statement and counterclaims. The hearing is scheduled for July 2024.

20. Restructuring

In fiscal 2023, the Company commenced restructuring actions within its Innovative Medicine and MedTech segments. The amounts and details of the current year programs are included below.

In fiscal 2023, the Company completed a prioritization of its research and development (R&D) investment within its Innovative Medicine segment to focus on the most promising medicines with the greatest benefit to patients. This resulted in the exit of certain programs within certain therapeutic areas. The R&D program exits are primarily in infectious diseases and vaccines including the discontinuation of its respiratory syncytial virus (RSV) adult vaccine program, hepatitis and HIV development. Pre-tax Restructuring expenses of $479 million in the fiscal year 2023, included the termination of partnered and non-partnered development program costs and asset impairments. The estimated costs of these total activities is between $500 million - $600 million and is expected to be completed by the end of fiscal year 2024.

In fiscal 2023, the Company initiated a restructuring program of its Orthopaedics franchise within the MedTech segment to streamline operations by exiting certain markets, product lines and distribution network arrangements. The pre-tax restructuring expense of $319 million in the fiscal year 2023 primarily included inventory and instrument charges related to market and product exits. The estimated costs of the total program are between $700 million - $800 million and is expected to be completed by the end of fiscal year 2025.

The following table summarizes the restructuring expenses for the fiscal year 2023:

(Pre-tax Dollars in Millions)	2023
Innovative Medicine Segment[1]	$479
MedTech Segment[2]	319
Total Programs	$798

[1] Included $449 million in Restructuring and $30 million in Cost of products sold on the Consolidated Statement of Earnings

[2] Included $40 million in Restructuring and $279 million in Cost of products sold on the Consolidated Statement of Earnings

Restructuring reserves as of December 31, 2023 and January 1, 2023 were insignificant.

21. Kenvue separation and discontinued operations

On May 8, 2023, Kenvue, completed an initial public offering (the IPO) resulting in the issuance of 198,734,444 shares of its common stock, par value $0.01 per share (the "Kenvue Common Stock"), at an initial public offering of $22.00 per share for net proceeds of $4.2 billion. The excess of the net proceeds from the IPO over the net book value of the Johnson & Johnson divested interest was $2.5 billion and was recorded to additional paid-in capital. As of the closing of the IPO, Johnson & Johnson owned approximately 89.6% of the total outstanding shares of Kenvue Common Stock and at July 2, 2023, the non-controlling interest of $1.3 billion associated with Kenvue was reflected in equity attributable to non-controlling interests in the consolidated balance sheet in the fiscal second quarter of 2023.

On August 23, 2023, Johnson & Johnson completed the disposition of an additional 80.1% ownership of Kenvue Common Stock through an exchange offer, which resulted in Johnson & Johnson acquiring 190,955,436 shares of the Company's common stock in exchange for 1,533,830,450 shares of Kenvue Common Stock. The $31.4 billion of Johnson & Johnson common stock received in the exchange offer is recorded in Treasury stock. Following the exchange offer, the Company owns 9.5% of the total outstanding shares of Kenvue Common Stock that was recorded in other assets within continuing operations at the fair market value of $4.3 billion as of August 23, 2023. Subsequent changes are reflected in other income/expense and amounted to $0.4 billion expense through December 31, 2023.

Johnson & Johnson divested net assets of $11.6 billion as of August 23, 2023, and the accumulated other comprehensive loss attributable to the Consumer Health business at that date was $4.3 billion. Additionally, at the date of the exchange offer, Johnson & Johnson decreased the non-controlling interest by $1.2 billion to record the deconsolidation of Kenvue. This resulted in a non-cash gain on the exchange offer of $21.0 billion that was recorded in Net earnings from discontinued operations, net of taxes in the consolidated statements of earnings for the fiscal third quarter of 2023. This one-time gain includes a gain of $2.8 billion on the Kenvue Common Stock retained by Johnson & Johnson. The gain on the exchange offer qualifies as a tax-free transaction for U.S. federal income tax purposes.

Also in connection with the separation, Johnson & Johnson and Kenvue entered into a separation agreement and also entered into various other agreements that provide for certain transactions to effect the transfer of the assets and liabilities of the Consumer Health business to Kenvue and to govern various interim and ongoing relationships between Kenvue and Johnson & Johnson following the completion of the Kenvue IPO, including transition services agreements (TSAs), transition manufacturing agreements (TMAs), trademark agreements, intellectual property agreements, an employee matters agreement, and a tax matters agreement. Under the TSAs, Johnson & Johnson will provide Kenvue various services and, similarly, Kenvue will provide Johnson & Johnson various services. The provision of services under the TSAs generally will terminate within 24 months following the Kenvue IPO. Additionally, Johnson & Johnson and Kenvue entered into TMAs pursuant to which Johnson & Johnson will manufacture and supply to Kenvue certain products and, similarly, Kenvue will manufacture and supply to Johnson & Johnson certain products. The terms of the TMAs range in initial duration from 3 months to 5 years.

Amounts related to the TSAs and TMAs included in the consolidated statements of earnings were immaterial for the fiscal year 2023. Additionally, the amounts due to and from Kenvue for the above agreements was not material as of December 31, 2023.

The results of the Consumer Health business (previously reported as a separate business segment), as well as the associated gain, have been reflected as discontinued operations in the Company's consolidated statements of earnings as Net earnings from discontinued operations, net of taxes. Prior periods have been recast to reflect this presentation. As a result of the separation of Kenvue, Johnson & Johnson incurred separation costs of $986 million, $1,089 million and $67 million in the fiscal years 2023, 2022 and 2021, respectively, which are also included in Net earnings from discontinued operations, net of taxes. These costs were primarily related to external advisory, legal, accounting, contractor and other incremental costs directly related to separation activities. In the fiscal 2022, as part of the planned separation of the Company's Consumer Health business, the Company recognized approximately $0.5 billion in net incremental tax costs. As of January 1, 2023, the assets and liabilities associated with the Consumer Health business were classified as assets and liabilities of discontinued operations in the consolidated balance sheets.

Details of Net Earnings from Discontinued Operations, net of taxes are as follows:

(Dollars in Millions)	2023[1]	2022	2021
Sales to customers	$10,036	14,953	15,035
Cost of products sold	4,369	6,494	6,452
Gross profit	5,667	8,459	8,583
Selling, marketing and administrative expenses	3,085	4,519	4,542
Research and development expense	258	468	437
Interest Income	(117)	—	—
Interest expense, net of portion capitalized	199	—	—
Other (income) expense, net	1,092	1,060	(37)
(Gain) on separation of Kenvue	(20,984)	—	—
Restructuring	—	46	43
Earnings from Discontinued Operations Before Provision for Taxes on Income	22,134	2,366	3,598
Provision for taxes on income	307	795	521
Net earnings from Discontinued Operations	**$21,827**	**1,571**	**3,077**

[1] The Company ceased consolidating the results of the Consumer Health business on August 23, 2023, the date of the exchange offer, but continued to reflect any separation costs incurred as part of discontinued operations through the end of the fiscal fourth quarter.

The following table presents depreciation, amortization and capital expenditures of the discontinued operations related to Kenvue:

(Dollars in Millions)	2023[1]	2022	2021
Depreciation and Amortization	$383	641	739
Capital expenditures	$162	303	314

Details of assets and liabilities of discontinued operations were as follows:

	January 1, 2023
Assets	
Cash and cash equivalents	$1,238
Accounts receivable trade, less allowances for doubtful accounts	2,121
Inventories	2,215
Prepaid expenses and other receivables	256
Total current assets of discontinued operations	**5,830**
Property, plant and equipment, net	1,821
Intangible assets, net	9,836
Goodwill	9,184
Deferred taxes on income	176
Other assets	390
Total noncurrent assets of discontinued operations	**$21,407**
Liabilities	
Loans and notes payable	$15
Accounts payable	1,814
Accrued liabilities including accrued taxes on income	644
Accrued rebates, returns and promotions	838
Accrued compensation and employee related obligations	279
Total current liabilities of discontinued operations	**3,590**
Long-term debt	2
Deferred taxes on income	2,383
Employee related obligations	225
Other liabilities	291
Total noncurrent liabilities of discontinued operations	**$2,901**

22. Selected quarterly financial data (unaudited)

Selected unaudited quarterly financial data has been recast for discontinued operations for the years 2023 and 2022 and is summarized below:

	2023				2022			
(Dollars in Millions Except Per Share Data)	First Quarter[1]	Second Quarter	Third Quarter[2]	Fourth Quarter[3]	First Quarter[4]	Second Quarter	Third Quarter	Fourth Quarter[5]
Segment sales to customers								
Innovative Medicine	$13,413	13,731	13,893	13,722	12,869	13,317	13,214	13,163
MedTech	7,481	7,788	7,458	7,673	6,971	6,898	6,782	6,776
Total sales	20,894	21,519	21,351	21,395	19,840	20,215	19,996	19,939

Diluted net earnings (loss) per share	(0.03)	1.96	10.21	1.67	1.93	1.80	1.68	1.33

(1) The fiscal first quarter of 2023 includes a $6.9 billion charge related to talc matters.

(2) The fiscal third quarter of 2023 includes; a non-cash gain on the exchange offer of $21.0 billion that was recorded in Net earnings from discontinued operations, net of taxes; $0.6 billion related to the unfavorable change in the fair value of the retained stake in Kenvue and $0.4 billion related to the partial impairment of Idorsia convertible debt and the change in the fair value of the Idorsia equity securities held.

(3) The fourth quarter of 2023 includes favorable changes in the fair value of securities of $0.4 billion

(4) In the fiscal first quarter of 2022, the Company recorded an intangible asset impairment charge of approximately $0.6 billion related to an in-process research and development asset, bermekimab (JnJ-77474462).

(5) The fiscal fourth quarter of 2022 includes one-time COVID-19 Vaccine related exit costs of $0.8 billion.

Report of independent registered public accounting firm

To the Board of Directors and Shareholders of Johnson & Johnson

Opinions on the financial statements and internal control over financial reporting

We have audited the accompanying consolidated balance sheets of Johnson & Johnson and its subsidiaries (the "Company") as of December 31, 2023 and January 1, 2023, and the related consolidated statements of earnings, of comprehensive income, of equity and of cash flows for each of the three fiscal years in the period ended December 31, 2023, including the related notes (collectively referred to as the "consolidated financial statements"). We also have audited the Company's internal control over financial reporting as of December 31, 2023, based on criteria established in Internal Control - Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2023 and January 1, 2023, and the results of its operations and its cash flows for each of the three fiscal years in the period ended December 31, 2023 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2023, based on criteria established in Internal Control - Integrated Framework (2013) issued by the COSO.

Basis for opinions

The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express opinions on the Company's consolidated financial statements and on the Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the consolidated financial statements included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Definition and limitations of internal control over financial reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Critical audit matters

The critical audit matters communicated below are matters arising from the current period audit of the consolidated financial statements that were communicated or required to be communicated to the audit committee and that (i) relate to accounts or disclosures that are material to the consolidated financial statements and (ii) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matters below, providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

U.S. pharmaceutical rebate reserves – managed care, medicare and medicaid

As described in Note 1 to the consolidated financial statements, the Company recognizes revenue from product sales when obligations under the terms of a contract with the customer are satisfied. Rebates and discounts provided to customers are accounted for as variable consideration and recorded as a reduction in sales. The liability for such rebates and discounts is recognized within Accrued Rebates, Returns, and Promotions on the consolidated balance sheet. A significant portion of the liability related to rebates is from the sale of pharmaceutical goods within the U.S., primarily the Managed Care, Medicare and Medicaid programs, which amounted to $11.5 billion as of December 31, 2023. For significant rebate programs, which include the U.S. Managed Care, Medicare and Medicaid rebate programs, rebates and discounts estimated by management are based on contractual terms, historical experience, patient outcomes, trend analysis, and projected market conditions in the U.S. pharmaceutical market.

The principal considerations for our determination that performing procedures relating to U.S. pharmaceutical rebate reserves - Managed Care, Medicare and Medicaid is a critical audit matter are the significant judgment by management due to the significant measurement uncertainty involved in developing these reserves and the high degree of auditor judgment, subjectivity and audit effort in performing procedures and evaluating the assumptions related to contractual terms, historical experience, patient outcomes, trend analysis, and projected market conditions in the U.S. pharmaceutical market.

Addressing the matter involved performing procedures and evaluating audit evidence in connection with forming our overall opinion on the consolidated financial statements. These procedures included testing the effectiveness of controls relating to U.S. pharmaceutical rebate reserves - Managed Care, Medicare and Medicaid, including controls over the assumptions used to estimate these rebates. These procedures also included, among others, (i) developing an independent estimate of the rebates by utilizing third party information on price and market conditions in the U.S. pharmaceutical market, the terms of the specific rebate programs, and the historical experience and trend analysis of actual rebate claims paid; (ii) testing rebate claims processed by the Company, including evaluating those claims for consistency with the contractual and mandated terms of the Company's rebate arrangements; and (iii) comparing the independent estimates to management's estimates.

Litigation contingencies – talc

As described in Notes 1 and 19 to the consolidated financial statements, the Company records accruals for loss contingencies associated with legal matters, including talc, when it is probable that a liability will be incurred and the amount of the loss can be reasonably estimated. To the extent adverse awards, judgments, or verdicts have been rendered against the Company, management does not record an accrual until a loss is determined to be probable and can be reasonably estimated. For these matters, management is unable to estimate the possible loss or range of loss beyond the amounts accrued. Amounts accrued for legal contingencies often result from a complex series of judgments about future events and uncertainties that rely heavily on estimates and assumptions including timing of related payments. The ability to make such estimates and judgments can be affected by various factors, including, among other things, whether damages sought in the proceedings are unsubstantiated or indeterminate; scientific and legal discovery has not commenced or is not complete; proceedings are in early stages; matters present legal uncertainties; there are significant facts in dispute; procedural or jurisdictional issues; the uncertainty and unpredictability of the number of potential claims; ability to achieve comprehensive multi-party settlements; complexity of related cross-claims and counterclaims; and/or there are numerous parties involved. Management continues to believe that the Company has strong legal grounds to contest the talc verdicts it has appealed. Notwithstanding management's confidence in the safety of the Company's talc products, in certain circumstances the Company has settled cases. The Company has recognized a total provision of approximately $9 billion, of which approximately one-third is recorded as a current liability and which encompasses actual and contemplated settlements. The recorded amount remains the Company's best estimate of probable loss after the dismissal. The parties have not yet reached a full resolution of all talc matters and the Company is unable to estimate the possible loss or range of loss beyond the remaining amount accrued.

The principal considerations for our determination that performing procedures relating to the talc litigation is a critical audit matter are the significant judgment by management when assessing the likelihood of a loss being incurred, when determining whether a reasonable estimate of the loss or range of loss for the future and existing talc claims can be made, and when determining the timing of any settlement payments, which in turn led to a high degree of auditor judgment, subjectivity and effort in performing procedures and evaluating management's assessment of the loss contingencies associated with this litigation.

Addressing the matter involved performing procedures and evaluating audit evidence in connection with forming our overall opinion on the consolidated financial statements. These procedures included testing the effectiveness of controls relating to management's evaluation of the talc litigation, including controls over determining whether a loss is probable and whether the amount of loss can be reasonably estimated, as well as financial statement disclosures. These procedures also included, among others, (i) gaining an understanding of the Company's process around the accounting and reporting for the talc litigation; (ii) obtaining and evaluating certain executed settlement agreements related to the talc litigation (iii) discussing the status of significant known actual and potential litigation and settlements activity with the Company's in-house legal counsel, as well as external counsel when deemed necessary; (iv) obtaining and evaluating the letters of audit inquiry with internal and external legal counsel for significant litigation; (v) evaluating the reasonableness of management's assessment regarding whether an unfavorable outcome is reasonably possible or probable and reasonably estimable; and (vi) evaluating the sufficiency of the Company's litigation contingencies disclosures.

Florham Park, New Jersey
February 16, 2024

We have served as the Company's auditor since at least 1920. We have not been able to determine the specific year we began serving as auditor of the Company.

Management's report on internal control over financial reporting

Under Section 404 of the Sarbanes-Oxley Act of 2002, management is required to assess the effectiveness of the Company's internal control over financial reporting as of the end of each fiscal year and report, based on that assessment, whether the Company's internal control over financial reporting is effective.

Management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting is designed to provide reasonable assurance as to the reliability of the Company's financial reporting and the preparation of external financial statements in accordance with generally accepted accounting principles.

Internal controls over financial reporting, no matter how well designed, have inherent limitations. Therefore, internal control over financial reporting determined to be effective can provide only reasonable assurance with respect to financial statement preparation and may not prevent or detect all misstatements. Moreover, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

The Company's management has assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2023. In making this assessment, the Company used the criteria established by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in "Internal Control-Integrated Framework (2013)." These criteria are in the areas of control environment, risk assessment, control activities, information and communication, and monitoring. The Company's assessment included extensive documenting, evaluating and testing the design and operating effectiveness of its internal controls over financial reporting.

Based on the Company's processes and assessment, as described above, management has concluded that, as of December 31, 2023, the Company's internal control over financial reporting was effective.

The effectiveness of the Company's internal control over financial reporting as of December 31, 2023 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report, which appears herein.

Item 9. Changes in and disagreements with accountants on accounting and financial disclosure

Not applicable.

Item 9A. Controls and procedures

Disclosure controls and procedures. At the end of the period covered by this Report, the Company evaluated the effectiveness of the design and operation of its disclosure controls and procedures. The Company's disclosure controls and procedures are designed to ensure that information required to be disclosed by the Company in the reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by the Company in the reports that it files or submits under the Exchange Act is accumulated and communicated to the Company's management, including its principal executive and principal financial officers, or persons performing similar functions, as appropriate to allow timely decisions regarding required disclosure. Joaquin Duato, Chairman and Chief Executive Officer, and Joseph J. Wolk, Executive Vice President, Chief Financial Officer, reviewed and participated in this evaluation. Based on this evaluation, Messrs. Duato and Wolk concluded that, as of the end of the period covered by this Report, the Company's disclosure controls and procedures were effective.

Reports on internal control over financial reporting. The information called for by this item is incorporated herein by reference to Management's report on internal control over financial reporting, and the attestation regarding internal controls over financial reporting included in the report of independent registered public accounting firm included in Item 8 of this Report.

Changes in internal control over financial reporting. During the fiscal quarter ended December 31, 2023, there were no changes in the Company's internal control over financial reporting identified in connection with the evaluation required under Rules 13a-15 and 15d-15 under the Exchange Act that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting. The Company continues to monitor and assess the effectiveness of the design and operation of its disclosure controls and procedures.

The Company is implementing a multi-year, enterprise-wide initiative to integrate, simplify and standardize processes and systems for the human resources, information technology, procurement, supply chain and finance functions. These are enhancements to support the growth of the Company's financial shared service capabilities and standardize financial systems. This initiative is not in response to any identified deficiency or weakness in the Company's internal control over financial reporting. In response to this initiative, the Company has and will continue to align and streamline the design and operation of its financial control environment.

Item 9B. Other information

Securities trading plans of Directors and Executive Officers. During the fiscal fourth quarter of 2023, none of our directors or officers (as defined in Rule 16a-1(f) of the Exchange Act) informed us of the adoption or termination of a "Rule 10b5-1 trading arrangement" or "non-Rule 10b5-1 trading arrangement," each as defined in Item 408 of Regulation S-K.

Item 9C. Disclosure regarding foreign jurisdictions that prevent inspections

Not applicable.

Part III

Item 10. Directors, executive officers and corporate governance

The information called for by this item is incorporated herein by reference to the discussion of the Audit Committee under the caption Item 1. Election of Directors - Board committees; and the material under the captions Item 1. Election of Directors and, if applicable, Delinquent Section 16(a) reporting in the Proxy Statement; and the material under the caption "Executive Officers of the Registrant" in Part I of this Report.

The Company's Code of Business Conduct, which covers all employees (including the Chief Executive Officer, Chief Financial Officer and Controller), meets the requirements of the SEC rules promulgated under Section 406 of the Sarbanes-Oxley Act of 2002. The Code of Business Conduct is available on the Company's website at www.jnj.com/code-of-business-conduct, and copies are available to shareholders without charge upon written request to the Secretary at the Company's principal executive offices. Any substantive amendment to the Code of Business Conduct or any waiver of the Code granted to the Chief Executive Officer, the Chief Financial Officer or the Controller will be posted on the Company's website at www.jnj.com/code-of-business-conduct within five business days (and retained on the website for at least one year).

In addition, the Company has adopted a Code of Business Conduct & Ethics for Members of the Board of Directors and Executive Officers. The Code of Business Conduct & Ethics for Members of the Board of Directors and Executive Officers is available on the Company's website at www.investor.jnj.com/governance/corporate-governance-overview/code-of-business-conduct--ethics, and copies are available to shareholders without charge upon written request to the Secretary at the Company's principal executive offices. Any substantive amendment to the Code or any waiver of the Code granted to any member of the Board of Directors or any executive officer will be posted on the Company's website at www.investor.jnj.com/governance/corporate-governance-overview/code-of-business-conduct--ethics within five business days (and retained on the website for at least one year).

Item 11. Executive compensation

The information called for by this item is incorporated herein by reference to the material under the captions Item 1. Election of Directors – Director compensation, and Item 2. Compensation Committee report, Compensation discussion and analysis and Executive compensation tables in the Proxy Statement.

The material incorporated herein by reference to the material under the caption Compensation Committee report in the Proxy Statement shall be deemed furnished, and not filed, in this Report and shall not be deemed incorporated by reference into any filing under the Securities Act of 1933, as amended, or the Securities Exchange Act of 1934, as amended, as a result of this furnishing, except to the extent that the Company specifically incorporates it by reference.

Item 12. Security ownership of certain beneficial owners and management and related stockholder matters

The information called for by this item is incorporated herein by reference to the material under the caption Item 1. Stock ownership in the Proxy Statement; and Note 16 Common stock, stock option plans and stock compensation agreements of the Notes to Consolidated Financial Statements in Item 8 of this Report.

Equity compensation plan information

The following table provides certain information as of December 31, 2023 concerning the shares of the Company's Common Stock that may be issued under existing equity compensation plans.

Plan Category	Number of Securities to be Issued Upon Exercise of Outstanding Options and Rights	Weighted Average Exercise Price of Outstanding Options and Rights	Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans[2][3]
Equity Compensation Plans Approved by Security Holders[1]	127,211,785	$123.41	130,112,007
Equity Compensation Plans Not Approved by Security Holders	—	—	—
Total	**127,211,785**	**$123.41**	**130,112,007**

(1) Included in this category are the following equity compensation plans which have been approved by the Company's shareholders: 2012 Long-Term Incentive Plan and 2022 Long-Term Incentive Plan.

(2) This column excludes shares reflected under the column "Number of Securities to be Issued Upon Exercise of Outstanding Options and Rights."

(3) The 2012 Long-Term Incentive Plan expired April 26, 2022. All options and restricted shares granted subsequent to that date were under the 2022 Long-Term Incentive Plan.

Item 13. Certain relationships and related transactions, and director independence

The information called for by this item is incorporated herein by reference to the material under the captions Item 1. Election of Directors - Related person transactions & Director independence in the Proxy Statement.

Item 14. Principal accountant fees and services

The information called for by this item is incorporated herein by reference to the material under the caption Item 3. Ratification of appointment of independent registered public accounting firm in the Proxy Statement.

Part IV

Item 15. Exhibits and financial statement schedules

The following documents are filed as part of this report:

1. *Financial Statements*

   Consolidated balance sheets at end of fiscal years 2023 and 2022

   Consolidated statements of earnings for fiscal years 2023, 2022 and 2021

   Consolidated statements of comprehensive income for Fiscal Years 2023, 2022 and 2021

   Consolidated statements of equity for fiscal years 2023, 2022 and 2021

   Consolidated statements of cash flows for fiscal years 2023, 2022 and 2021

   Notes to Consolidated Financial Statements

   Report of independent registered public accounting firm

All schedules are omitted because they are not applicable or the required information is included in the financial statements or notes.

2. *Exhibits required to be filed by item 601 of regulation S-K*

   The information called for by this item is incorporated herein by reference to the Exhibit Index in this Report.

Item 16. Form 10-K summary

Registrants may voluntarily include a summary of information required by Form 10-K under this Item 16. The Company has elected not to include such summary information.

Signatures

Pursuant to the requirements of Section 13 of the Securities Exchange Act of 1934, the registrant has duly caused this Report to be signed on its behalf by the undersigned, thereunto duly authorized.

† Certain exhibits and schedules have been omitted pursuant to Item 601(b)(2)(ii) or 601(b)(10)(iv) of Regulation S-K, as applicable.

° Omitted from the printed version of this 2023 Annual Report.

A copy of any of the Exhibits listed above will be provided without charge to any shareholder submitting a written request specifying the desired exhibit(s) to the Secretary at the principal executive offices of the Company. Pursuant to Item 601(b)(4)(iii)(A) of Regulation S-K, the Company has not filed as exhibits to this Form 10-K certain long-term debt instruments, including indentures, under which the total amount of securities authorized does not exceed 10% of the total assets of the Company and its subsidiaries on a consolidated basis. The Company hereby agrees to furnish a copy of any such instrument to the SEC upon request.

Exhibit 31.1

CERTIFICATION OF CHIEF EXECUTIVE OFFICER

PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT

I, Joaquin Duato, certify that:

1. I have reviewed this Annual Report on Form 10-K for the fiscal year ended December 31, 2023 (the "report") of Johnson & Johnson (the "Company");

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the Company as of, and for, the periods presented in this report;

4. The Company's other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the Company and have:

(a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the Company, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

(b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

(c) Evaluated the effectiveness of the Company's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

(d) Disclosed in this report any change in the Company's internal control over financial reporting that occurred during the Company's most recent fiscal quarter (the Company's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting; and

5. The Company's other certifying officer(s) and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the Company's auditors and the audit committee of the Company's board of directors (or persons performing the equivalent functions):

(a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Company's ability to record, process, summarize and report financial information; and

(b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the Company's internal control over financial reporting.

Exhibit 32.1

CERTIFICATION OF CHIEF EXECUTIVE OFFICER PURSUANT TO SECTION 906 OF THE SARBANES-OXLEY ACT

The undersigned, Joaquin Duato, the Chief Executive Officer of Johnson & Johnson, a New Jersey corporation (the "Company"), pursuant to 18 U.S.C. 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002, hereby certifies that, to the best of my knowledge:

(1) the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2023 (the "Report") fully complies with the requirements of Section 13(a) of the Securities Exchange Act of 1934; and

(2) the information contained in the Report fairly presents, in all material respects, the financial condition and results of operations of the Company.

/s/ Joaquin Duato
Joaquin Duato
Chief Executive Officer

Dated: February 16, 2024

This certification is being furnished to the SEC with this Report on Form 10-K pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 and shall not, except to the extent required by such Act, be deemed filed by the Company for purposes of Section 18 of the Securities Exchange Act of 1934, as amended, or otherwise subject to the liability of that section.

CERTIFICATION OF CHIEF FINANCIAL OFFICER PURSUANT TO
SECTION 906 OF THE SARBANES-OXLEY ACT

The undersigned, Joseph J. Wolk, the Chief Financial Officer of Johnson & Johnson, a New Jersey corporation (the "Company"), pursuant to 18 U.S.C. 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002, hereby certifies that, to the best of my knowledge:

(1) the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2023 (the "Report") fully complies with the requirements of Section 13(a) of the Securities Exchange Act of 1934; and

(2) the information contained in the Report fairly presents, in all material respects, the financial condition and results of operations of the Company.

/s/ Joseph J. Wolk
Joseph J. Wolk
Chief Financial Officer

Dated: February 16, 2024

This certification is being furnished to the SEC with this Report on Form 10-K pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 and shall not, except to the extent required by such Act, be deemed filed by the Company for purposes of Section 18 of the Securities Exchange Act of 1934, as amended, or otherwise subject to the liability of that section.

The tables below are provided to reconcile certain non-GAAP financial disclosures in the 2023 Chairman's Letter.

Reconciliation of Non-GAAP Financial Measures

2024 Annual Meeting of Shareholders

Thursday, April 25, 2024
10:00 a.m. (Eastern Standard Time)

Meeting held virtually at *www.virtualshareholdermeeting.com/JNJ2024.*

All shareholders as of the record date of February 27, 2024 are invited to attend.

A formal Notice of Annual Meeting, Proxy Statement and proxy have been made available to shareholders.

2023 Annual Report on Form 10-K and 2024 Proxy Statement

Johnson & Johnson's Annual Report on Form 10-K for the fiscal year ended December 31, 2023 is included in this Annual Report in its entirety, with the exception of certain exhibits. The Form 10-K, complete with all of its exhibits, is available on our website at *www.investor.jnj.com/financials/sec-filings,* and the SEC's website at *www.sec.gov.*

Shareholders may also obtain copies of the exhibits, our 2023 Annual Report on Form 10-K and our 2024 Proxy Statement, without charge, upon written request to the Office of the Corporate Secretary at our principal office address, or by calling (800) 950-5089.

Electronic delivery notification

The 2024 Proxy Statement and our 2023 Annual Report are available on our website *investor.jnj.com/asm.* Shareholders who receive paper copies of our Proxy Statement and Annual Report by mail can elect to receive instead an email message with a link to those documents on the Internet. Registered shareholders may enroll in electronic delivery at: *www.computershare-na.com/green*. Beneficial shareholders (who hold shares of Johnson & Johnson Common Stock through a bank, broker or other holder of record) generally can enroll for electronic delivery at: *enroll.icsdelivery.com/jnj.*

Exhibit “J21”

This is Exhibit “J21” referred to in the Affidavit of Sukhad Juneja, sworn before me this 25th day of July, 2024.

A Commissioner for Taking Affidavits, etc.

Arash Rouhi

Federal Court Cour fédérale

Date: 20230717

Docket: T-2627-22

Citation: 2023 FC 870

Ottawa, Ontario, July 17, 2023

PRESENT: The Honourable Madam Justice Aylen

BETWEEN:

JANSSEN INC.

Applicant

and

THE MINISTER OF HEALTH AND THE ATTORNEY GENERAL OF CANADA

Respondents

PUBLIC JUDGMENT AND REASONS
(Confidential version issued on June 21, 2023)

[1] The Applicant, Janssen Inc [Janssen], seeks judicial review of a decision of the Office of Submissions and Intellectual Property [OSIP] on behalf of the Minister of Health dated November 15, 2022. OSIP determined that Canadian Patent No. 3,113,837 [837 Patent] was not eligible to be added to the Patent Register against STELARA® with respect to two supplementary new drug submissions.

[2] While Janssen has raised a number of issues on this application, of central importance are the following two issues: (i) whether OSIP's decision that a supplemental new drug submission approved for additional safety data that could provide a clinician more confidence in prescribing a drug long-term is not a "change in use of the medicinal ingredient" as prescribed by subsection 4(3) of the *Patented Medicines (Notice of Compliance) Regulations*, SOR/93-133 [*PMNOC Regulations*] if the approved indication never included a temporal restriction on its use was reasonable; and (ii) whether the Canadian patent filing date requirement in subsection 4(6) of the *PMNOC Regulations* is *ultra vires* the *Patent Act*.

[3] For the reasons that follow, I am not satisfied that Janssen has demonstrated that there is any basis for the Court's intervention. Accordingly, the application for judicial review shall be dismissed in its entirety, with costs.

I. Background

A. *Drug Approval under the Food and Drug Regulations*

[4] Drug manufacturers who wish to advertise or sell a new drug in Canada must first obtain a Notice of Compliance [NOC] pursuant to the *Food and Drug Regulations*, CRC, c 870, by filing a drug submission with the Minister.

[5] The *Food and Drug Regulations* refer to several types of drug submissions, including a new drug submission [NDS] and a supplemental new drug submission [SNDS]. An NDS is

typically filed by the innovator drug manufacturer in order to obtain an NOC. An NDS contains a variety of clinical, non-clinical, chemistry and manufacturing data relating to the safety, efficacy and quality of the drug. The Minister evaluates this information to determine whether the drug meets the regulatory requirements in order to initially approve the drug for sale on the Canadian market. After an NOC for an NDS is issued, a manufacturer will typically continue to file information about the drug. Significant changes made to the information or material contained in the NDS are made by filing an SNDS. An NOC is also issued by the Minister for each approved SNDS.

B. *Product Monographs*

[6] As part of the drug review process for an NDS or SNDS, Health Canada reviews a Product Monograph which is a factual, scientific document that describes a drug product's properties, claims, indications, contra-indications, conditions, dosage, administration and any other relevant information that may be required for the optimal, safe and effective use of the drug. The "Indications and Clinical Use" section of a Product Monograph, among other things, lists the uses for which the drug has been approved through the issuance of an NOC.

C. *The PMNOC Regulations*

[7] The *PMNOC Regulations*, which were enacted in 1993 and have subsequently been amended on a number of occasions, were promulgated pursuant to the authority granted to the Governor in Council by subsection 55.2(4) the *Patent Act*, RSC 1985, c P-4, which provides:

The Governor in Council may make regulations respecting the infringement of any patent that, directly or indirectly, could result or results from the making, construction, use or sale of a patented invention in accordance with subsection (1), including regulations

(a) respecting the conditions that must be fulfilled before a document — including a notice, certificate or permit — concerning any product to which a patent may relate may be issued to any person under any Act of Parliament that regulates the manufacture, construction, use or sale of that product, in addition to any conditions provided for by or under that Act;

(b) respecting the earliest day on which such a document may be issued to a person and the earliest day on which it may take effect, and respecting the manner in which each day is to be determined;

(c) respecting the issuance, suspension or revocation of such a document in circumstances where, directly or indirectly, the document's issuance could result or results in the infringement of a patent;

(d) respecting the prevention and resolution of disputes with respect to the day on which such a document may be issued or take effect;

(e) respecting the prevention and resolution of disputes with respect to the infringement of a patent that could result directly or indirectly from the manufacture, construction, use or sale of a product referred to in paragraph (a);

Le gouverneur en conseil peut, par règlement, régir la contrefaçon de tout brevet qui résulte ou pourrait résulter, de façon directe ou autrement, de la fabrication, de la construction, de l'utilisation ou de la vente, au titre du paragraphe (1), d'une invention brevetée, et notamment :

a) régir les conditions complémentaires nécessaires à la délivrance à quiconque, relativement à un produit auquel peut se rapporter un brevet, de tout titre — avis, certificat, permis ou autre — en vertu de lois fédérales régissant la fabrication, la construction, l'utilisation ou la vente d'un tel produit;

b) régir la première date à laquelle un tel titre peut être délivré et celle à laquelle il peut prendre effet, ainsi que la manière de fixer chacune de ces dates;

c) régir la délivrance, la suspension ou la révocation d'un tel titre lorsque la délivrance de celui-ci entraîne ou pourrait entraîner, de façon directe ou autrement, la contrefaçon d'un brevet;

d) régir la prévention et le règlement de différends portant sur la date à laquelle un tel titre peut être délivré ou prendre effet;

e) régir la prévention et le règlement de différends portant sur la contrefaçon d'un brevet qui pourrait résulter, de façon directe ou autrement, de la fabrication, de la construction, de l'utilisation ou de la vente d'un produit visé à l'alinéa a);

f) régir le règlement de différends portant sur la contrefaçon d'un brevet qui résulte, de façon directe ou autrement, de la fabrication, de la

(f) respecting the resolution of disputes with respect to the infringement of a patent that results directly or indirectly from the manufacture, construction, use or sale of such a product;

(g) conferring rights of action with respect to disputes referred to in any of paragraphs (d) to (f);

(h) restricting or excluding the application of other rights of action under this Act or another Act of Parliament to disputes referred to in any of paragraphs (d) to (f);

(i) designating the court of competent jurisdiction in which a proceeding with respect to rights of action referred to in paragraph (g) is to be heard;

(j) respecting such proceedings, including the procedure of the court in the matter, the defences that may be pleaded, the remedies that may be sought, the joinder of parties and of rights of action and the consolidation of other proceedings, the decisions and orders the court may make and any appeals from those decisions and orders; and

(k) specifying who may be an interested person for the purposes of subsection 60(1) with respect to disputes referred to in paragraph (e).

construction, de l'utilisation ou de la vente d'un tel produit;

g) conférer des droits d'action concernant les différends visés à l'un ou l'autre des alinéas d) à f);

h) limiter ou interdire le recours à d'autres droits d'action prévus par toute loi fédérale concernant les différends visés à l'un ou l'autre des alinéas d) à f);

i) désigner le tribunal compétent à l'égard des procédures résultant de l'exercice des droits d'action visés à l'alinéa g);

j) régir ces procédures, notamment la procédure devant ce tribunal, les moyens de défense qui peuvent être invoqués, les conclusions qui peuvent être recherchées, la jonction de parties, la réunion de droits d'action ou d'autres procédures, les décisions et ordonnances qui peuvent être rendues ainsi que les appels de ces décisions et ordonnances;

k) préciser qui peut être un intéressé pour l'application du paragraphe 60(1) dans le cadre des différends visés à l'alinéa e).

[8] As confirmed by the Supreme Court of Canada in *AstraZeneca Canada Inc v Canada (Minister of Health)*, 2006 SCC 49 at paragraph 12, the *PMNOC Regulations* lie at the intersection of two regulatory systems with sometimes conflicting objectives – (i) the law governing the approval of new drugs (*Food and Drug Act*) with the objective of encouraging the bringing of safe

and effective medicines to market to advance the nation's health; and (ii) patent protection provided to innovators under the *Patent Act*.

[9] The Regulatory Impact Analysis Statement [RIAS] related to the 2006 amendments to the *PMNOC Regulations* describes the balancing function as follows:

> The Government's pharmaceutical patent policy seeks to balance effective patent enforcement over new and innovative drugs with the timely market entry of their lower priced generic competitors. The current manner in which that balance is realized was established in 1993, with the enactment of Bill C-91, the *Patent Act Amendment Act*, 1992, S.C. 1993, c. 2.
>
> On the one end of the balance lies subsection 55.2(1) of the *Patent Act*, better known as the "early-working" exception. In the pharmaceutical industry, early-working allows second and subsequent entry drug manufacturers (typically generic drug companies) to use a patented innovative drug for the purpose of seeking approval to market a competing version of that drug. Normally, conduct of this kind would constitute patent infringement but an exception has been made so that generic drug companies can complete Health Canada's regulatory approval process while the equivalent innovative drug is still under patent, in order to be in a position to enter the market as soon as possible after patent expiry. The generic pharmaceutical industry estimates that early-working can accelerate the market entry of its products in Canada by some three to five years.
>
> The PM(NOC) Regulations represent the other half of the balance. As explained in the original Regulatory Impact Analysis Statement (RIAS) which accompanied their passage in 1993, in creating the early-working exception, Bill C-91 removed an exclusive right otherwise available to patentees and the PM(NOC) Regulations are therefore required "…to ensure that this new exception to patent infringement is not abused by generic drug applicants seeking to sell their products during the term of the competitor's patent…" The PM(NOC) Regulations do this by linking Health Canada's ability to approve a generic drug to the patent status of the equivalent innovative product the generic seeks to copy. Under the current scheme, a generic drug company which compares its product directly or indirectly with a patented, innovative drug in order to

> establish the former's safety and efficacy and secure marketing approval from Health Canada (which comes in the form of a "notice of compliance" or 'NOC") must make one of two choices. It can either agree to await patent expiry before obtaining its NOC or make an allegation justifying immediate market entry that is either accepted by the innovator or upheld by the court.
>
> Thus, while early-working is intended to promote the timely market entry of generic drugs by allowing them to undergo the regulatory approval process in advance of patent expiry, the PM(NOC) Regulations are intended to provide effective patent enforcement by ensuring the former does not result in the actual issuance of a generic NOC until patent expiry or such earlier time as the court or innovator considers justified having regard to the generic company's allegations. Despite their seemingly competing policy objectives, it is important that neither instrument be considered in isolation as the intended policy can only be achieved when the two operate in a balanced fashion.

D. ***The Patent Register***

[10] The Minister maintains a Patent Register, which is a list of patents and certifications of supplementary protection associated with each approved drug. Pursuant to subsections 3(2) to 3(8) of the *PMNOC Regulations*, the Minister has the discretion to maintain the Patent Register, including the ability to add or delete patents in various prescribed circumstances.

[11] A "first person" who files an NDS or SNDS may, pursuant to subsection 4(1) of the *PMNOC Regulations*, submit to the Minister a patent for listing on the Patent Register in respect of the drug for which approval is sought. A patent will only be added to the Patent Register if the Minister is satisfied that the relevant regulatory criteria are met.

[12] In the case of an SNDS, paragraph 4(3)(c) sets out the product specificity requirements that must be met for a patent to be listed on the Patent Register:

(3) A patent on a patent list in relation to a supplement to a new drug submission is eligible to be added to the register if the supplement is for a change in formulation, a change in dosage form or a change in use of the medicinal ingredient, and […] (c) in the case of a change in use of the medicinal ingredient, the patent contains a claim for the changed use of the medicinal ingredient that has been approved through the issuance of a notice of compliance in respect of the supplement.	(3) Est admissible à l'adjonction au registre tout brevet, inscrit sur une liste de brevets, qui se rattache au supplément à une présentation de drogue nouvelle visant une modification de la formulation, une modification de la forme posologique ou une modification de l'utilisation de l'ingrédient médicinal, s'il contient, selon le cas : c) dans le cas d'une modification d'utilisation de l'ingrédient médicinal, une revendication de l'utilisation modifiée de l'ingrédient médicinal, l'utilisation ayant été approuvée par la délivrance d'un avis de conformité à l'égard du supplément.

[13] Subsection 4(4) of the *PMNOC Regulations* prescribe what must be included in a patent list:

A patent list shall contain the following: (a) an identification of the new drug submission or the supplement to a new drug submission to which the list relates; (b) the medicinal ingredient, brand name, dosage form, strength, route of administration and use set out in the new drug submission or the	La liste de brevets comprend : a) l'identification de la présentation de drogue nouvelle ou du supplément à la présentation de drogue nouvelle qui s'y rattachent; b) l'ingrédient médicinal, la marque nominative, la forme posologique, la concentration, la voie d'administration et l'utilisation prévus à la

supplement to a new drug submission to which the list relates;

(c) for each patent on the list, the patent number, the filing date of the patent application in Canada, the date of grant of the patent and the date on which the term limited for the duration of the patent will expire under section 44 or 45 of the Patent Act;(d) for each patent on the list, a statement that the first person who filed the new drug submission or the supplement to a new drug submission to which the list relates

is the owner of the patent,

has an exclusive licence to the patent or to a certificate of supplementary protection in which that patent is set out, or

(iii) has obtained the consent of the owner of the patent to its inclusion on the list;

(e) the address in Canada for service, on the first person, of a notice of allegation referred to in paragraph 5(3)(a) or the name and address in Canada of another person on whom service may be made with the same effect as if service were made on the first person; and

(f) a certification by the first person that the information submitted under this subsection is accurate and that each patent on the list meets the eligibility requirements of subsection (2) or (3).

présentation ou au supplément qui s'y rattachent;

c) à l'égard de chaque brevet qui y est inscrit, le numéro de brevet, la date de dépôt de la demande de brevet au Canada, la date de délivrance de celui-ci et la date d'expiration du brevet aux termes des articles 44 ou 45 de la *Loi sur les brevets*;

d) à l'égard de chaque brevet qui y est inscrit, une déclaration portant que la première personne qui a déposé la présentation de drogue nouvelle ou le supplément à une présentation de drogue nouvelle qui s'y rattache :

(i) soit en est le propriétaire,

(ii) soit en détient la licence exclusive ou détient une telle licence à l'égard d'un certificat de protection supplémentaire qui mentionne ce brevet,

(iii) soit a obtenu le consentement du propriétaire pour l'inscrire sur la liste;

e) l'adresse au Canada de la première personne aux fins de signification de l'avis d'allégation visé à l'alinéa 5(3)a) ou les nom et adresse au Canada d'une autre personne qui peut en recevoir signification comme s'il s'agissait de la première personne elle-même;

f) une attestation de la première personne portant que les renseignements fournis aux termes du présent paragraphe

sont exacts et que chaque brevet qui y est inscrit est conforme aux conditions d'admissibilité prévues aux paragraphes (2) ou (3).

[14] The *PMNOC Regulations* also prescribe timing requirements related to patent listing, which depend on when the patent is issued. Specifically, subsections 4(5) and (6) provide:

(5) Subject to subsection (6), a first person who submits a patent list must do so at the time the person files the new drug submission or the supplement to a new drug submission to which the patent list relates.

(6) A first person may, after the date of filing of a new drug submission or a supplement to a new drug submission, and within 30 days after the issuance of a patent that was issued on the basis of an application that has a filing date in Canada that precedes the date of filing of the submission or supplement, submit a patent list, including the information referred to in subsection (4), in relation to the submission or supplement.

(5) Sous réserve du paragraphe (6), la première personne qui présente une liste de brevets doit le faire au moment du dépôt de la présentation de drogue nouvelle ou du supplément à une présentation de drogue nouvelle qui s'y rattachent.

(6) La première personne peut, après la date de dépôt de la présentation de drogue nouvelle ou du supplément à une présentation de drogue nouvelle et dans les trente jours suivant la délivrance d'un brevet faite au titre d'une demande de brevet dont la date de dépôt au Canada est antérieure à celle de la présentation ou du supplément, présenter une liste de brevets, à l'égard de cette présentation ou de ce supplément, qui contient les renseignements visés au paragraphe (4).

[15] As such, only patents that have a filing date in Canada before the filing date of an SNDS are eligible to be added to the Patent Register.

[16] For the purpose of the administration of the patent list, the Minister utilizes a form entitled "Form IV" that the Minister requires be completed by each first person. Form IV states in its header in bold to "COMPLETE ONE FORM PER PATENT PER SUBMISSION".

[17] Having a patent listed on the Patent Register in relation to a particular drug affords significant protections to an innovator. If a second person files a drug submission that directly or indirectly compares their drug with, or makes reference to, a first person's drug that is marketed in Canada under an NOC and which has one or more patents listed on the Patent Register, the second person must, pursuant to subsection 5(1) and (2.1) of the *PMNOC Regulations*, address each listed patent. One manner of addressing a listed patent is to serve on the first person a notice of allegation [NOA], pursuant to subsection 5(2.1)(c), alleging that the listed patent is invalid or would not be infringed by the second person making, constructing, using or selling their drug product. The first person then has the right, within 45 days of being served with a NOA, to bring an action against the second person pursuant to subsection 6(1) seeking a declaration that making, constructing, using or selling of the second person's drug product in accordance with the second person's drug submission would infringe the listed patent(s) addressed in the NOA. When such an action is brought, the Minister is prohibited from issuing a NOC to the second person for 24 months from the date of commencement of the action or such other periods of time prescribed by subsection 7(1) of the *PMNOC Regulations*.

[18] However, not all patents will receive the aforementioned protection afforded by the regulatory regime simply by relating to a drug for which an NOC has been issued. Only those

patents that meet the product specificity and timing requirements of the *PMNOC Regulations* will benefit from the regime's protections.

E. STELARA®

[19] STELARA® is a Schedule D biologic drug containing the medicinal ingredient ustekinumab [STELARA]. First approved in Canada in December of 2008 for the treatment of psoriasis, STELARA has since gained approvals for several other indications including its use to treat plaque psoriasis, active psoriatic arthritis and moderately to severely active Crohn's disease.

[20] There are currently no patents listed on the Patent Register in respect of STELARA. Canadian Patent No. 2,418,961 was previously listed on November 17, 2009, but expired on August 9, 2021.

[21] Health Canada's "Submissions Under Review" page shows at least one company has filed a submission for approval of a biosimilar of STELARA in January of 2023.

(1) SNDS 244739

[22] On February 15, 2019, the Applicant filed SNDS 224739 [SNDS 739] seeking approval for a new use of STELARA for the treatment of adult patients with moderately to severely active ulcerative colitis and updates to the Product Monograph. Supporting studies were submitted, including approximately one year of data (44 weeks) from a UNIFI-M maintenance study.

[23] On January 23, 2020, the Minister approved the use of STELARA for the treatment of ulcerative colitis, issuing an NOC for SNDS 739. The NOC stated, under the heading "Reasons for Supplement":

> New indication: The treatment of adult patients with moderately to severely active ulcerative colitis who have had an inadequate response with, lost response to, or were intolerant to either conventional therapy or a biologic or have medical contraindications to such therapies.

[24] The "Dosage and Administration" section of the approved Product Monograph included a recommended induction treatment regimen for ulcerative colitis, as well as a recommended maintenance dose regimen. No temporal limitation on the duration of treatment was included in the Product Monograph. Put differently, the NOC for SNDS 739 did not approve the use of STELARA to treat ulcerative colitis for a limited period of time.

(2) SNDS 244670

[25] On October 1, 2020, Janssen filed SNDS 244670 [SNDS 670] seeking to update the Product Monograph of STELARA with updated two-year safety and efficacy data (96 weeks) from the same on-going UNIFI-M study on its use for ulcerative colitis (which use had been previously approved with SNDS 739).

[26] The Clinical Evaluation Executive Summary notes, under the heading "Subject", that SNDS 670 is to "update the product monograph to include results from the long-term extensions

of two Phase 3 studies for the treatment of adult patients with moderately to severely active Crohn's disease or ulcerative colitis".

[27] Both the General Note to Reviewer and Regulatory Executive Summary notes the purpose of the submission was to provide data on safety and efficacy of STELARA through five years of treatment in subjects with Crohn's disease and two years of treatment in subjects with ulcerative colitis, including relevant data in regard to a post-marketing adverse drug reaction for hypersensitivity vasculitis.

[28] Janssen indicated in the Product Information Regulatory Process Form for SNDS 670 that "there [were] no changes to the indication/Use/Dosage (including the maximum daily dose)".

[29] On September 9, 2021, Health Canada issued an NOC for SNDS 670. Under the heading "Reason for Supplement", the NOC states "Updates to the Product Monograph". The approval resulted in two changes to the Product Monograph, as shown in bold and underlined below:

Product Monograph (SNDS 739)	**Product Monograph (SNDS 670)**
(1) In the "Clinical Trial Adverse Drug Reactions" section addressing adverse drug reactions reported in studies related to ulcerative colitis, on page 12:	
The safety of STELARA®/STELARA® I.V. was evaluated in two randomized, double-blind, placebo-controlled studies (UNIFI-I and UNIFI-M) in 960 adult patients with moderately to severely active ulcerative colitis. The primary endpoint was the proportion of patients in clinical remission at Week 44. Secondary endpoints included the proportion of patients maintaining clinical response through Week 44, the proportion of patients with improvement of endoscopic appearance of the mucosa at Week 44, the proportion of patients with corticosteroid-free clinical remission at Week 44, and the proportion of patients maintaining clinical remission through Week 44 in patients who achieved clinical remission 8 weeks after induction. **Patients who completed the maintenance study through Week 44 were eligible to continue treatment through Week 96.**

(3) The 837 Patent

[30] On September 24, 2019, Janssen filed in Canada a patent application for the 837 Patent. The 837 Patent, entitled "Safe and effective method of treating ulcerative colitis with anti-IL 12/IL23 antibody", claims priority from three U.S. provisional patents applications, the earliest one having been filed on September 24, 2018.

[31] The 837 Patent contains 68 claims generally directed toward the use of an anti-IL-12/IL-23p40 antibody (including ustekinumab) for the treatment of moderately to severely active ulcerative colitis, where the subject failed to respond to or was intolerant of at least one enumerated therapy or the subject demonstrated corticosteroid dependence and compositions for use in such treatment.

[32] The claims of the 837 Patent are directed to the treatment of ulcerative colitis, including numerous claims where the clinical response of the subject "continues at least 44 weeks after week 0".

[33] The 837 Patent was issued on July 12, 2022.

[34] On July 25, 2022, Janssen sought to list the 837 Patent in relation to SNDS 670 by submitting three Form IVs for the 837 Patent (one for each DIN).

[35] No Form IV was ever submitted for the 837 Patent in relation to SNDS 739. The deadline by which Janssen could have submitted a patent list for SNDS 739 (as prescribed by subsection 4(6) of the *PMNOC Regulations*) was August 11, 2022. There is no evidence in the record as to why this was not done.

F. OSIP's Preliminary Decision

[36] By letter dated July 29, 2022, OSIP acknowledged receipt of Janssen's patent lists for the 837 Patent in relation to SNDS 670. OSIP advised Janssen, in detail, of the basis for its preliminary view that SNDS 670 was not approved for a change in use of the medicinal ingredient and as such, SNDS 670 did not provide a basis to list the 837 Patent. Even if SNDS was considered to be approved for a change in use of a medicinal ingredient, OSIP advised that its preliminary view was that the 837 Patent did not contain a claim to the very change sought for approval in the submission.

[37] OSIP also noted the existence of SNDS 739 and that had a patent list been submitted in respect of the 837 Patent and SNDS 739, it would not meet the timing requirements of subsection 4(6), as the filing date for SNDS 739 was February 15, 2019 and the date of filing in Canada of the 837 Patent was subsequent to that date.

[38] OSIP requested that Janssen provide representations as to the eligibility of the 837 Patent for listing on the patent register in respect of SNDS 670.

G. Janssen's Response to the Preliminary Decision

[39] By letter dated September 14, 2022, Janssen provided detailed submissions in response to OSIP's request. With respect to SNDS 670, Janssen asserted that the 837 Patent claims [redacted] are a new method of use approved through SNDS 670, which is the submission against which Janssen originally sought listing on July 19, 2022. Janssen asserted that it was of the view that the 837 Patent is also listable as against SNDS 739 and that there are in fact no timing issues under subsection 4(6) as the only rational date to be used is the claim date and not the Canadian filing date. Janssen asserted that the use of the Canadian filing date in the *PMNOC Regulations* was illogical, arbitrary and *ultra vires* the scheme of the *Patent Act* and of the *PMNOC Regulations* themselves. Janssen asserted that OSIP ought to apply the intent of the *PMNOC Regulations* with respect to the timing of the patent and the submission under subsection 4(6) and when the claim date is properly applied, the 837 Patent is listable.

[40] In relation to Janssen's request that the 837 Patent also be listed in relation to SNDS 739, Janssen stated at footnote 2 of its submission:

> As a patent list was already submitted with respect to the '837 Patent within the requisite 30 days of its issuance we trust that the OPML will not consider this request to be out of time under subsection 4(6) of the *Regulations*. Further, we understand that the OPML has already considered the listing of the '837 Patent against SNDS 224739, as reflected in the Letter. If the OPML rejects this request, then we respectfully request that the OPML advise us of the reason and allow us an opportunity to respond.

[41] For reasons unknown to the Court, Janssen did not include a Form IV with its submission in relation to SNDS 739 and the 837 Patent.

[42] In support of its assertion that the 837 Patent claims [redacted] are a new method of use approved through SNDS 670, Janssen asserted that a clinician reviewing the new Product Monograph approved with SNDS 670 would change their prescribing practices, especially a clinician who may have been otherwise hesitant to prescribe STELARA beyond 44 weeks. Janssen supported this assertion regarding a clinician's understanding of the new additions to the Product Monograph with an expert statement from Dr. Brian Feagan and two publications.

[43] With respect to the publications, Janssen made the following submissions:

> A clinician's understanding of the additions to the Product Monograph is also reflected in publications reporting on the data collected for the treatment of patients with ustekinumab up to Week 96, including Panaccione R, et al. Ustekinumab is effective and safe for ulcerative colitis through 2 years of maintenance therapy. *Aliment Pharmacol Ther*. 2020; **52**: 1658-1675 ("Pannaccione (2020)"; enclosed). Panaccione (2020) concluded that the "efficacy of ustekinumab in patients with [ulcerative colitis] was sustained through 92 weeks" (abstract), that "[r]ates of symptomatic remission were maintained from Week 44 through Week 92" (page 1671), and that "[t]he results reported here in patients with moderately-to-severely active [ulcerative colitis], together with both clinical trial and registry data confirm the positive long-term efficacy and safety profile of ustekinumab-treated patients" (page 1672). With respect to safety, Panaccione (2020) concluded that "[n]o new safety signals were observed" (abstract) and that "[t]he safety profile observed for ustekinumab in the second year of maintenance treatment was consistent with that reported through the first year during the maintenance study and with the established ustekinumab safety profile" (page 1672). […]
>
> The importance of safety data for ustekinumab beyond one year was also stated in an integrated safety study, Sandborn WJ, et al. Safety

> of Ustekinumab in Inflammatory Bowel Disease: Pooled Safety Analysis Results from Phase 2/3 Studies. *Inflamm Bowel Dis*. 2021; **27(7)**: 994-1007 ("Sandborn (2021)", enclosed). Sandborn (2021) pooled data from six studies, including the UNIFI study for ulcerative colitis, through one year. The authors concluded (pages 1006-7):
>
> > Though these and previously reported findings are reassuring, longer-term longitudinal data and larger (eg, real-world observational) studies are ongoing to confirm current findings of no increased malignancy risk with IL-12/23 inhibition.
> >
> > …
> >
> > There are several limitations to this study. In a lifetime disease, 1 year of treatment is relatively short; longer-term data will be needed to further support these findings. This may limit comparisons, especially for long latency events like malignancies or certain infections. Although the data contained in this article are only from clinical trials, limitations on interpretation may differ from outcomes observed in real-world.
>
> The information added to the Stelara Product Monograph via SNDS 24470 thus provided clinicians with support of the safety findings made one year after that Sandborn (2021) indicated was required.
>
> [Emphasis in original.]

[44] With respect to the expert statement of Dr. Feagan, Dr. Feagan is a gastroenterologist at London Health Sciences Centre and a Professor of Medicine at the Schulich School of Medicine and Dentistry at Western University, with a research focus on the design, conduct and execution of large-scale randomized controlled trials in Crohn's disease and ulcerative colitis. Dr. Feagan's mandate was to: (i) provide brief background information on ulcerative colitis and its treatment options (including STELARA); and (ii) to advise how, if at all, a clinician's prescribing practices would be influenced by the additions to the STELARA Product Monograph arising from the NOC

for SNDS 670. Dr. Feagan provided no evidence in relation to the aforementioned publications relied upon by Janssen.

[45] While Janssen did not make specific submissions related to Dr. Feagan's evidence (other than as detailed in paragraph 42 above), Dr. Feagan opined that community gastroenterologists (who are gastroenterologists not located in a teaching or research hospital) would "take comfort" in the additional information (as it would "alleviate fears relating to potential side effects") and would be more willing to prescribe or be more comfortable prescribing STELARA based on the additional information contained in the Product Monograph.

II. The Decision under Review

[46] On November 15, 2022, OSIP provided Janssen with its final decision. OSIP found that SNDS 670 was not approved for a change in formulation, change in dosage form or change in use of the medicinal ingredient and did not present an opportunity to list a patent on the Patent Register in accordance with subsection 4(3) of the *PMNOC Regulations*. OSIP noted that SNDS 670 amended STELARA's Product Monograph to include updated safety and efficacy data generated through an on-going study, which was the very same on-going study that had been previously included in the Product Monograph for SNDS 739. OSIP considered the text, context and purpose of subsection 4(3) of the *PMNOC Regulations*, the relevant jurisprudence and the submissions of Janssen, before concluding that updating the safety information in the product monograph did not result in a change in use in SNDS 670.

[47] OSIP went on to examine whether the 837 Patent would have been eligible for listing if one were to assume that SNDS 670 was in fact for a change in use. However, OSIP found that the 837 Patent did not contain a claim to the very change that Janssen alleged was approved by the NOC for SNDS 670 as required by subsection 4(3).

[48] In relation to SNDS 739, OSIP determined that Janssen had not filed a patent list to add the 837 Patent to the Patent Register against SNDS 739. The OSIP went on to find that, even if Janssen had submitted a patent list to add the 837 Patent against SNDS 739, Janssen would not have met the timing requirements in subsection 4(6) of the *PMNOC Regulations,* as the 837 Patent application was filed in Canada after the filing date of SNDS 739. OSIP held that to consider the claim date/priority date (as opposed to the Canadian filing date) as the appropriate date when assessing the application of subsection 4(6) as urged by Janssen would be to ignore the clear words of the *PMNOC Regulations*, circumvent the strict timing requirements and undo the balance struck by the *PMNOC Regulations* and subsection 55.2(1) of the *Patent Act*.

III. Issue and Standard of Review

[49] This application raises the following issues:

A. Whether OSIP's decision not to add the 837 Patent to the Patent Register in relation to SNDS 670 and SNDS 739 was unreasonable and in particular:

i. Whether OSIP's determination that SNDS 670 was not approved for a change in use of the medicinal ingredient was unreasonable;

ii. Whether OSIP's determination that the 837 Patent was not eligible to be added to the Patent Register as it did not meet the product specificity requirements of paragraph 4(3)(c) was unreasonable; and

iii. Whether OSIP's determination that Janssen failed to provide a patent list in relation to SNDS 739 was unreasonable.

B. Whether the Canadian filing date requirement in subsection 4(6) of the *PMNOC Regulations* is *ultra vires* the *Patent Act*.

[50] The parties agree and I concur that the first issue is reviewable on a standard of reasonableness. When reviewing for reasonableness, the Court must determine whether the decision under review, including both its rationale and outcome, is transparent, intelligible and justified. A reasonable decision is one that is based on an internally coherent and rational chain of analysis and that is justified in relation to the facts and law that constrain the decision-maker [see *Canada (Minister of Citizenship and Immigration) v Vavilov*, 2019 SCC 65 at paras 15, 85]. The Court must be able to trace the decision maker's reasoning without encountering any fatal flaws in the overarching logic and the Court must be satisfied that there is a line of analysis within the given reasons that could reasonably lead the decision maker from the evidence before it to the conclusion at which it arrived [see *Vavilov, supra* at para 102].

[51] A number of elements will generally be relevant in evaluating whether a given decision is reasonable, including the governing statutory scheme, other relevant statutory or common law, the principles of statutory interpretation, the evidence before the decision maker and facts of which the decision maker may take notice, the submissions of the parties, the past practices and decisions of the decision maker and the potential impact of the decision on the individual to whom it applies [see *Vavilov, supra* at para 106].

[52] Where a decision involves a matter of statutory interpretation, the Court does not undertake a *de novo* analysis of the question. Rather, the Court still undertakes a reasonableness review, examining the administrative decision as a whole, including the reasons provided and the outcome reached. An administrative decision maker's task is to interpret the contested provision in a manner consistent with the text, context and purpose, applying its particular insight into the statutory scheme at issue. The modern principles of statutory interpretation apply equally when an administrative decision maker interprets a provision. Where the meaning of a statutory provision is disputed in administrative proceedings, the decision maker must demonstrate in its reasons that it was alive to these essential elements [see *Vavilov, supra* at para 115-116, 120, 121].

[53] The Court will intervene only if it is satisfied there are sufficiently serious shortcomings in the decision such that it cannot be said to exhibit the requisite degree of justification, intelligibility and transparency [see *Adenjij-Adele v Canada (Minister of Citizenship and Immigration)*, 2020 FC 418 at para 11].

[54] With respect to the second issue, both parties agree that the issue of whether the Canadian filing date requirement in subsection 4(6) of the *PMNOC Regulations* is *ultra vires* the *Patent Act* is reviewable on a reasonableness standard. However, they disagree as to whether, as the Respondent asserts, the pre-*Vavilov* case law (and in particular, *Katz Group Canada Inc v Ontario (Health and Long-Term Care)*, 2013 SCC 64) remains instructive and applicable to *vires* challenges to regulations.

[55] Prior to *Vavilov*, the Supreme Court of Canada outlined the method to determine if regulations were *ultra vires* in *Katz*, *supra* at paragraphs 24 to 28. The *Katz* approach requires the party challenging the *vires* of the regulations to show that the regulations (which benefit from a presumption of validity) are inconsistent with the purposes and objectives of the enabling statute or the scope of the statutory mandate when read as a whole. The three parts to the *Katz* rule are: (1) the challenging party bears the burden of proof; (2) the Court is directed to take a broad and purposive approach to interpreting the challenged regulation and the enabling statute, consistent with general guidance on statutory interpretation; and (3) the challenging party must overcome the presumption that the regulations are valid, which can only be done by establishing that the regulations are irrelevant, extraneous or completely unrelated to objectives of the governing statute. In particular, the Supreme Court directs that a *vires* challenge does not involve assessing the policy merits of the regulations as the motives or other considerations (political, economic, social or partisan) are irrelevant.

[56] After *Vavilov* established a general framework for review of administrative decisions, this prompted a debate regarding the extent to which the principles established in *Katz* were affected

by *Vavilov.* Some decisions of this Court continued to be guided by the *Katz* approach, mindful of this debate [see *Innovative Medicines Canada v Canada (Attorney General)*, 2020 FC 725 at paras 66-72; *Bertrand v Acho Dene Koe First Nation*, 2021 FC 287 at paras 73-76].

[57] The Federal Court of Appeal weighed into this debate in *Portnov v Canada (Attorney General)*, 2021 FCA 171. Justice Stratas, writing for the Court, explained how the approach outlined in *Katz* had been overtaken by *Vavilov* and thus, the Federal Court of Appeal did not follow the guidance of *Katz* but applied reasonableness review as per *Vavilov* [see *Portnov, supra* at paras 18-28].

[58] The Federal Court of Appeal weighed in again in *International Air Transport Association v Canadian Transportation Agency*, 2022 FCA 211, also considering the jurisprudence on whether courts reviewing the validity of regulations should apply a *Vavilov* standard of review analysis or the *ultra vires* doctrine from *Katz*. In *International Air Transport Association*, the appellant challenged numerous provisions of new regulations (in particular, challenging the Minister's Direction requiring the Agency to make regulations in respect of tarmac delays of three hours or less) on the basis that they exceeded the Agency's authority under the *Canada Transportation Act*. The Federal Court of Appeal discussed the analytical framework in the *Dunsmuir* era, wherein the reviewing court interpreted the statutory grant of authority to determine whether it fell within or outside its ambit. Justice de Montigny, writing for the Court, goes on to discuss the judicial review framework that was later applied in cases such as *Katz*, concluding that *Vavilov* did not bring clarity to the confusion around what framework to apply in the context of delegated legislation. Further, the *References re Greenhouse Gas Pollution Pricing Act*, 2021 SCC 11, wherein the

Supreme Court reviewed the validity of regulations at issue, made no mention of the *ultra vires* doctrine or *Vavilov* and reasonableness review. The Federal Court of Appeal noted that the issue is far from settled:

> [188] Unfortunately, *Vavilov* did not bring much clarity to that confusion. Because the Supreme Court purported to adopt the reasonableness standard as the default standard of review to all administrative actions, most intermediate appeal courts adopted the view that delegated legislation would henceforth be reviewed against that standard: see, for example, *1193652 B.C. Ltd. v. New Westminster (City)*, 2021 BCCA 176 at paras. 48-59; *Portnov v. Canada (Attorney General)*, 2021 FCA 171; *Canadian Association of Refugee Lawyers v. Canada (Citizenship and Immigration)*, 2020 FCA 196 [2021] 1 F.C.R. 271; Paul Daly, "Regulations and Reasonableness Review" (January 29, 2021), online (blog): *Administrative Law Matters* <https://www.administrativelawmatters.com/blog/2021/01/29/regulations-and-reasonableness-review/and the cases cited therein>.
>
> [189] This approach, however, has not been followed unanimously: see, for example, *Hudson's Bay Company ULC v. Ontario (Attorney General)*, 2020 ONSC 8046, 154 O.R. (3d) 103; *Friends of Simcoe Forest Inc. v. Minister of Municipal Affairs and Housing*, 2021 ONSC 3813 at para. 25. Indeed, the reasonableness standard review is fraught with difficulties, not the least of which is that it assumes the body or person that has been granted the power to adopt delegated legislation has also been vested with the power to decide questions of law and to determine the proper interpretation of the habilitating statute; yet, this is obviously not always the case: see John M. Evans, "Reviewing Delegated Legislation After *Vavilov*: *Vires* or Reasonableness?" (2021) 34:1 Can. J. Admin. L.& P. 1.
>
> [190] More recently, the Supreme Court has brought grist to the mill of those who support the view that the *Vavilov* judicial review framework does not apply to delegated legislation. In *References re Greenhouse Gas Pollution Pricing Act*, 2021 SCC 11, 455 D.L.R. (4th) 1 [*Ref re Greenhouse Gas*], the Court reviewed the validity of the regulations at issue on the basis of its own interpretation of the enabling statute, without expressing any deference to Cabinet on the interpretative issue. It is true that the majority (in contrast to the dissenting opinion of Rowe J.) made no mention of the *ultra*

> *vires* doctrine, but neither did it refer to *Vavilov* nor to reasonableness review. On the contrary, the majority took it upon itself to interpret the scope of the regulation-making powers found in the *Greenhouse Gas Pollution Pricing Act*, S.C. 2018, c. 12. While this is clearly not the last word on the subject, it signals at the very least that the issue is far from settled.
>
> [191] That being said, and whether we assess the validity of the Direction and of section 8 of the Regulations through the lens of the reasonableness standard of review or through the more exacting prism of the ultra vires doctrine, the result would be the same. For the appellants to succeed with their argument that subsection 86.11(2) of the CTA does not encompass the power to issue the *Direction* (and section 8 of the Regulations) because it relates to matters covered at paragraph 86.11(1)(f), they would have to show either that the Direction: 1) is irrelevant, extraneous or completely unrelated to the statutory purpose (*Katz* at para. 28; *Shell Canada Products Ltd. v. Vancouver (City)*, [1994] 1 S.C.R. 231, 1994 CanLII 115 (SCC) at p. 280), or 2) rests on an unreasonable interpretation of subsection 86.11(2). If the *Direction* (and section 8 of the CTA) satisfies the more exacting *ultra vires* framework, it will obviously meet the less stringent reasonableness standard of review analysis.

[59] However, in its most recent decision in *Innovative Medicines Canada v Canada (Attorney General)*, 2022 FCA 210, Justice Stratas, writing on behalf of the Court, held that *Portnov*, a unanimous and binding decision of this Court, binds future panels of the Federal Court of Appeal (and thus this Court), such that the methodology to be used to assess a regulation is that set out in *Vavilov*, not *Katz* [see *Innovative Medicines, supra,* at paras 26-27].

[60] The Federal Court of Appeal offers specific guidance in *Innovative Medicines, supra,* to the review of regulations enacted by the Governor in Council:

> [39] …Under *Vavilov*, the broader the regulation-making power in a statute, particularly in matters of policy that are quintessentially the preserve of the executive, the less constrained the regulation-

> maker will be in enacting the regulation: *Entertainment Software Association v. Society of Composers, Authors and Music Publishers of Canada*, 2020 FCA 100, [2021] 1 F.C.R. 374 at para. 28 (applying *Vavilov* and earlier cases consistent with it), aff'd 2022 SCC 30.
>
> [40] This is especially so for the Governor in Council. The Governor in Council is "at the apex of the executive", serves as "the grand co-ordinating body for the divergent provincial, sectional, religious, racial and other interests throughout the nation", and represents "different geographic, linguistic, religious, and ethnic groups": *Canada (Citizenship and Immigration) v. Canadian Council for Refugees*, 2021 FCA 72, 458 D.L.R. (4th) 125 at paras. 36-38. Thus, subject to limiting statutory language passed by our elected representatives, the Governor in Council's regulation-making power is often relatively unconstrained. The key is the limiting statutory language. *Vavilov* goes straight to that key, focusing on what meanings the language of the regulation-making power can reasonably bear. *Katz* doesn't. […]

[61] In conducting a reasonableness review, the Court is to assess the constraints on the administrative decision-maker (the primary constraint being the empowering legislation) and whether the decision maker has remained within them. The Court is entitled to look at the reasons offered by the decision maker, associated documents that shed light on the reasoning process, any submissions made to the decision maker and the record before the decision maker. In the case of decisions of the Governor in Council, reasoned explanations can often be found in the text of the legal instrument it is issuing, prior legal instruments related to it and any associated RIAS. Express explanations can be quite brief, yet still "pass muster" [see *Portnov*, *supra* at paras 33-34; *Innovative Medicines, supra* at para 44].

[62] I am satisfied that in this case, as no exception set out in *Vavilov* to reasonableness review applies, the standard of review is reasonableness and that the Court is to be guided by *Vavilov* (not

Katz) and the cases of the Federal Court of Appeal that apply *Vavilov* in conducting its reasonableness review.

IV. Analysis

A. OSIP's decision not to add the 837 Patent to the Patent Register for SNDS 670 and SNDS 739 was reasonable

[63] Paragraph 4(3)(c) of the *PMNOC Regulations* sets out the relevant product specificity requirement that must be met for a patent to be listed on the Patent Register in relation to an SNDS. A patent is eligible to be added to the Patent Register if: (i) the SNDS is for a "change in use of the medicinal ingredient"; and (ii) the patent contains a claim for the changed use of the medicinal ingredient that has been approved through the issuance of an NOC in respect of the SNDS.

[64] In relation to SNDS 670, Janssen takes issue with OSIP's determination that: (a) SNDS 670 was not for a change of use of a medicinal ingredient; and (b) that the 837 Patent does not contain a claim for the alleged changed use of the medicinal ingredient. I will address those issues in turn.

[65] In relation to SNDS 739, Janssen takes issue with OSIP's determination that no patent list to add the 837 Patent was filed by Janssen in relation to SNDS 739. The *vires* of the filing date requirement in subsection 4(6) of the *PMNOC Regulations* and its impact on Janssen's ability to add the 837 Patent to the Patent Register in relation to SNDS 739 is addressed separately below.

(1) OSIP's determination that SNDS 670 was not approved for a change in use of the medicinal ingredient was reasonable

[66] Before turning to Janssen's submissions and a consideration of the decision under review, I want to begin by looking at any prior consideration (judicial or otherwise) of the phrase "a change in use of the medicinal ingredient".

[67] The phrase "change in the use of a medicinal ingredient" is not defined in the *Patent Act* or the *PMNOC Regulations*.

[68] One can have reference to subsection 2(1) of the *PMNOC Regulations* which defines a "claim for the use of the medicinal ingredient". Subsection 4(1) permits a first person to submit a patent list in relation to an NDS and paragraph 4(2)(d) provides that a patent on a patent list in relation to an NDS is eligible to be added to the register if the patent contains a "claim for the use of the medicinal ingredient" and the use has been approved through the issuance of an NOC in respect of the NDS. While the focus of paragraph 4(2)(d) is on whether the patent contains a claim for the changed use of a medicinal ingredient, it is focused on the "use of the medicinal ingredient" that is later sought to be "changed" in paragraph 4(3)(c). A "claim for the use of the medicinal ingredient" is defined in subsection 2(1) to mean "a claim for the use of the medicinal ingredient for the diagnosis, treatment, mitigation or prevention of a disease, disorder or abnormal physical state, or its symptoms".

[69] In *Abbott Laboratories Ltd v Canada (Attorney General)*, 2008 FCA 244, one of the issues before the Court was whether the patent at issue contained a claim for the very change in use that was approved by the issuance of an NOC with respect to an SNDS. In that case, it was not disputed that a new indication for a drug (to treat NSAID ulcers) constituted a change in use in the medicinal ingredient.

[70] In *Solvay Pharma Inc v Canada (Attorney General)*, 2009 FC 102, this Court dismissed an application for judicial review of a decision of the Minister refusing to add Solvay's patent to the Patent Register pursuant to paragraph 4(3)(c). The Minister had refused to add the patent as the SNDS against which listing was sought did not approve a change in use of the medicinal ingredient. The drug in question, AndroGel, had initially been approved on the basis of safety and efficacy information from a clinical trial following patients to whom the drug was administered for six months. Solvay filed an SNDS to provide additional safety and efficacy information following the extension of that clinical trial to 42 months, including making associated updates to the Product Monograph. An NOC issued in connection with the SNDS and indicated that the reason for the SNDS was to "Update PM with long term extension study results".

[71] Solvay asserted that the SNDS approved a change in use of the medicinal ingredient "as the safe and effective duration of use is extended and important changes to the implied use of the product, as authorized to be described in the Product Monograph, are clearly the essential subject of the SNDS". The Minister rejected this argument and also found that the patent did not contain a claim for the changed use introduced in the Product Monograph by way of the SNDS. Specifically, the Minister held that the patent did not contain "a claim for the changed use of the

medicinal ingredient, for the long term use and relative safety of AndroGel". Rather, the Minister held that the uses of AndroGel are the same uses that were previously approved by an earlier SNDS.

[72] The Court found that the evidence supported the Minister's conclusion that Solvay did not meet either requirement for the listing of its patent on the Patent Register. With respect to the first requirement – that the SNDS represent a change in use of the medicinal ingredient – the Court held:

> [79] The evidence in the record satisfies me that the SNDS, filed on March 11, 2005, did not represent a change in use of the medicinal ingredient of AndroGel testosterone in the form of topical gel. The jurisprudence supports the proposition that "change in use" as that term is used in subsection 4(3) of the NOC Regulations is measured by the approved use in AndroGel's product monograph, as approved by Health Canada, which is described in the Indications and Clinical Use section of that document. AndroGel is indicated for hormone replacement therapy in men suffering from conditions associated with a testosterone deficiency. No change of indication and use was made to Solvay's AndroGel product monograph as a result of the 2006 NOC.

[73] In discussing the amendments to the *PMNOC Regulations* in 2006, the 2006 RIAS also provides some insight into the intended meaning of the phrase "a change in use of the medicinal ingredient", where it states:

> The amendments to section 4 also formally confirm the right to list new patents on the basis of SNDS filings and introduce listing requirements governing that right. Under these requirements, a patent which had been applied for prior to the filing of an SNDS may be submitted in relation to that SNDS provided the purpose of the latter is to obtain approval for a change in use of the medicinal

> ingredient (i.e. a new method of use or new indication), a change in formulation or a change in dosage form and the patent contains a claim to the formulation, dosage form or use so changed…
>
> [Emphasis added.]

(a) ***Janssen's submissions***

[74] Janssen asserts that OSIP's determination that SNDS 670 was not approved for a change in use is an improper fettering of OSIP's decision making power and is unreasonable. If a clinician's change in treatment duration or in prescribing practices would be changed by an SNDS, Janssen asserts that this should be sufficient to establish a change in use.

[75] Janssen asserts that OSIP's decision was unreasonable in light of the evidence before them – namely, the expert statement of Dr. Feagan and the two studies. In relation to Dr. Feagen, Janssen asserts that his evidence clearly demonstrated that the additional safety data would change prescribing practices of a community gastroenterologist. In the absence of any competing evidence procured by OSIP, Janssen asserts that there is no reasonable basis upon which OSIP could conclude that the approved health and safety data regarding the 96-week treatment and safety profile of STELARA in SNDS 670 is not a change in use.

[76] Janssen also points to the Sandborn and Panaccione studies, in which Janssen asserts the authors commented on the need for longer-term data to confirm findings of no increased malignancy risk with IL-12/23 inhibition. Janssen asserts that SNDS 670 provided that longer-term safety data that the authors called for and that Dr. Feagan stated would bring comfort or

confidence to Canadian clinicians to prescribe STELARA beyond 44 weeks. While OSIP held that a clinician who was "up to date" on ulcerative colitis research could have referred to either of the two studies before the approval of SNDS 670 to obtain information and "comfort" regarding prescribing STELARA for a longer period of time, Janssen says that this is irrelevant and does not change the fact that the addition of safety data to the approved Product Monograph is a change in use. Moreover, Janssen asserts that OSIP's finding is unsupported by any expert evidence and importantly, would not apply to clinicians who are not up to date on ulcerative colitis research, which is the sector of clinicians that Dr. Feagan was opining about. Janssen notes that there is no requirement in paragraph 4(3)(c) that all physicians change their prescribing practices, rather simply that there be a change in use and that Janssen has demonstrated such a change.

[77] Janssen further asserts that OSIP unreasonably applied *Solvay* to conclude that the addition of safety data can never be a change in use, whereas there is no express exclusion of safety data from the possible changes in use that can be covered by paragraph 4(3)(c) of the *PMNOC Regulations*. At the hearing, Janssen argued that OSIP was "blinded" by the *Solvay* decision and it tainted the entirety of OSIP's assessment of the meaning of "change in use".

[78] Moreover, Janssen asserts that the *Solvay* decision was guided by the evidentiary record before OSIP and in this case, the evidentiary record is distinguishable. Specifically:

A. In *Solvay*, there was no evidence before the Minister to support the conclusion that the SNDS contained a change in use, whereas in this case, the Minister had the evidence of Dr. Feagan and the two studies.

B. In *Solvay*, the Office of Patent Submissions and Liaison had sought the opinion of Health Canada experts, who concluded that there was no change in use, whereas in this case, the Minister did not adduce any of its own expert evidence or contradict Janssen's expert evidence.

C. In *Solvay*, the Court held that the patent claims contain no limitation on the duration of use and that the patent did not address the issue of the duration of testosterone therapy, whereas in this case, the nexus to the patent is present as the 837 Patent [redacted]

[79] Janssen asserts that OSIP failed to take into consideration these distinctions and that each of the aforementioned points of distinction alone undermines OSIP's "strong reliance" on *Solvay* and establish that OSIP's decision was based on a misapprehension of the law and evidence, thus rendering it unreasonable.

[80] Janssen further asserts that OSIP's interpretation of the product specificity requirement of a "change in use of the medicinal ingredient" is inconsistent with the context, language and purpose of the *Patent Act* and the *PMNOC Regulations*. Janssen asserts that the Governor in Council enacted paragraph 4(3)(c) with the broad terminology of change in use and the 2006 RIAS confirms an intention that a change in use was broad enough to include a new indication and a new method of use. Janssen asserts that the RIAS supports an understanding that change in use is not

to be restricted to changes to particular sections of the Product Monograph and that a change in use includes changes in the duration of treatment.

[81] Janssen asserts that the *PMNOC Regulations* must be read in line with the purpose of the *Patent Act* and should be considered in light of the societal imperative of encouraging new and better medical therapies and the difficulties associated with protecting pharmaceutical patent rights by way of conventional infringement litigation. Janssen asserts that the *PMNOC Regulations* are intended to protect that which the innovator has invested time and money to test and have approved for sale (or put different, to protect the patentee's contribution to the public through skill and ingenuity). The clinical trial data in SNDS 670 is the result of time and money invested by Janssen to obtain safety data for STELARA in patients with moderately or severely active ulcerative colitis, the exact type of substantive change intended to be protected by the *PMNOC Regulations*. By adopting an unduly restrictive meaning to change in use, Janssen asserts that it is being improperly denied the full benefit of the patent protection it should be provided as part of the balance of the early working exception. Such an unduly restrictive meaning also, according to Janssen, reduces incentives to research the safety and efficacy of existing medicinal ingredients because it stands in the way of listing patents tied to such research.

[82] Moreover, Janssen notes that the product specificity requirements were intended to prevent the listing of patents in respect of SNDSs for purely administrative changes (such as changes of manufacturer) and asserts that SNDS 670 is not akin to an administrative change.

(b) ***Consideration of Janssen's submissions***

[83] In interpreting a "change in use of the medicinal ingredient", the 2006 RIAS provides guidance that a change in use can be a new indication or a new method of use, but cannot be an administrative change (such as a change in drug or company name). There is no dispute that SNDS 670 was not for a new indication, as the treatment of ulcerative colitis was added to the Product Monograph by SNDS 739.

[84] The question then becomes whether, on the record before OSIP and considering the text, context and purpose of section 4(3)(c) of the *PMNOC Regulations*, the guidance provided by the RIAS, this Court's decision in *Solvay* and Janssen's submissions, OSIP reasonably determined that SNDS 670 was not approved for a change in use.

[85] In reaching their decision, OSIP considered the following evidence that was before them:

A. The existing Product Monograph as approved in relation to SNDS 739 approved STELARA to be used to treat adult patients with moderately to severely active ulcerative colitis who have had an inadequate response with, lost response to, or were intolerant to either conventional therapy or a biologic or have medical contraindications to such therapies. That approved use did not include a limitation on the duration of time STELARA could be used to treat ulcerative colitis (notwithstanding that the clinical trial data was limited to 44 weeks). Moreover, SNDS 670 did not seek to add a limitation on the duration of time STELARA could be used to treat ulcerative colitis.

B. The relevant NOC stated that SNDS 670 was approved for updates to the Product Monograph.

C. SNDS 670 did not result in any changes to the "Indications and Clinical Use" section of the product monograph, but rather only added safety and efficacy date to the "Clinical Trial Adverse Drug Reaction" and "Study Demographics and Trial Design" sections of the Product Monograph.

D. Dr. Feagan's evidence was that community gastroenterologists would "take comfort" in the additional information and would be more willing to prescribe or be more comfortable prescribing STELARA based on the additional information contained in the Product Monograph. However, he did not state that community gastroenterologists (or any other gastroenterologists) would not have prescribed STELARA for longer than 44 weeks based on the prior Product Monograph.

E. In Janssen's Product Information Regulatory Enrollment Process form, Janssen wrote (as opposed to checking a box) in relation to SNDS 670 that "there are no changes to the indication/Use/Dosage (including the maximum daily dose)".

[86] OSIP properly considered the aforementioned evidence, the text, context and purpose of the *PMNOC Regulations* (which I will address more fully below), considered the guidance provided in the 2006 RIAS, considered this Court's decision in *Solvay* (which I will also address in more detail below) and considered the submissions of Janssen before concluding as follows:

The OSIP recognizes that a change to the method of use of a medicinal ingredient can be reflected in sections of the product monograph other than the "Indications and Clinical Use" section. For example, the "Contraindications", "Warning and Precautions", and "Dosage and Administration" sections. However, the OSIP disagrees with Janssen's characterization that SNDS 244670 was approved for such a change. Rather, as detailed above, the OSIP is of the view that SNDS 244670 was approved for updates to the product monograph to include results from the long-term extensions of two Phase 3 studies for the treatment of adult patients with moderately to severely active Crohn's disease or ulcerative colitis.

Following the approval of SNDS 224739, STELARA (I.V.) could be used in the treatment of ulcerative colitis for an indefinite period of time. Both Janssen and Dr. Feagan submit that a clinician would change their prescribing practices upon reading the two sentences added to the STELARA (I.V.) product monograph following the approval of SNDS 244670. It is the position of Janssen and Dr. Feagan that the clinician practice would have changed given their increased comfort in prescribing STELARA (I.V.) beyond 44 weeks. However a clinician's reluctance to prescribe a drug is not a limitation on the approved use of that drug.

Clinicians were not prevented from prescribing the drug for the long-term use in treating ulcerative colitis. Dr. Feagan states at paragraph 21 that a community gastroenterologist may not be up to date on ulcerative colitis research and would have concerns about the potential for issues to arise after one year's administration of STELARA (I.V.). Therefore, a clinician who was up to date on ulcerative colitis could have referred to either of the two studies enclosed in Janssen's representations before the approval of SNDS 244670 and could have obtained the comfort needed to change their prescribing practices in accordance with the use for which SNDS 224739 was approved. In any event, a submission approved for additional data that could provide a clinician more confidence in prescribing a drug long-term is not sufficient for the submission to be considered as having been approved for a change in use of the drug if the indication never included a temporal restriction on its use.

Implicit in Janssen's position is the idea that the use of STELARA (I.V.) was limited by the period of time during which ustekinumab was administered to patients in the clinical trials underlying the approval of SNDS 224739. Janssen had made this position explicit on page 7 of its representations, where it states that the use set out in SNDS 224739 is for the treatment of ulcerative colitis "for up to 44 weeks". The OSIP disagrees with Janssen's position that the

> length of time for which STELARA (I.V.) could be used was limited. No such limitation was provided in the STELARA (I.V.) product monograph. As STELARA (I.V.) was approved for the use in treating ulcerative colitis for an indefinite period of time, the inclusion of updates to the product monograph to include results from the long-term extension of two Phase 3 studies could not have changed the approved use of STELARA (I.V.), irrespective of any additional confidence the information may provide clinicians.
>
> As noted above, the Federal Court considered substantially similar facts in *Solvay* and held that the inclusion of safety and efficacy information into the product monograph following an extension of a clinical trial did not constitute a change to the use of the medicinal ingredient as required by paragraph 4(3)(c) of the *PM(NOC) Regulations*. Similarly, the inclusion of updates to the STELARA (I.V.) product monograph to include results from the long-term extensions of two Phase 3 studies does not meet the requirements of paragraph 4(3)(c) of the *PM(NOC) Regulations*.
>
> [Emphasis added.]

[87] I find that OSIP's decision is based on an internally coherent and rational chain of analysis and is justified in relation to the facts and law that constrain OSIP. I see nothing unreasonable about OSIP's focus, in its interpretation and application of paragraph 4(3)(c), on the actual approved use of STELARA (i.e. the use as approved by the Minister) and not the prescribing practices of clinicians, as that which is being "changed" in subsection 4(3) is the use as previously approved by the Minister.

[88] I will now turn to address the specific arguments raised by Janssen.

[89] Turning first to the evidence of Dr. Feagan, OSIP clearly considered Dr. Feagan's evidence and did not dispute his statements regarding the influence that the additional safety and efficacy data would have on certain gastroenterologists. However, OSIP's decision turned on their

determination that STELARA was approved for use to treat ulcerative colitis with no temporal limitation on its use and that a clinician's reluctance to prescribe a drug is not a limitation on the approved use of that drug. Similarly, OSIP considered the two studies and regardless of whether a clinician may or may not have read the studies, OSIP found that a submission approved for additional data that could provide a clinician more confidence in prescribing a drug long-term is not sufficient for the submission to be considered as having been approved for a change in use of the drug if the indication never included a temporal restriction on its use. I see no error on OSIP's part in reaching these conclusions.

[90] With respect to *Solvay*, I reject Janssen's characterization of OSIP's treatment of the decision. On a fair reading, OSIP's reasons do not state that the addition of safety data can never be a change in use. Rather, OSIP considered this Court's decision in *Solvay*, outlined the facts of that case and summarized the Court's findings. OSIP noted the factual similarities between this case and *Solvay* and noted that its finding was supported by the Court's reasoning in *Solvay*.

[91] Janssen's suggestion that OSIP was "blinded" by *Solvay* and that *Solvay* tainted the entirety of OSIP's decision is baseless. OSIP is obligated to follow applicable precedents originating from this Court [see *Bank of Montreal v Li*, 2020 FCA 22 at para 37] and given the factual similarities between the two cases, it was reasonable for OSIP to rely on *Solvay* as an influential precedent. Moreover, a fair reading of OSIP's 23-page decision reveals that OSIP considered all relevant factors in interpreting and applying paragraph 4(3)(c), not just *Solvay*.

[92] While Janssen has attempted to distinguish *Solvay* and faults OSIP for failing to take into account the factual differences between the two cases, I would note that Janssen did not raise *Solvay* with OSIP or put any of its purported distinguishing facts to OSIP to suggest that OSIP should not follow *Solvay*. In any event, I am not satisfied that the factual differences identified by Janssen render OSIP's reliance on *Solvay* unreasonable. OSIP did not state that the two cases were identical, but rather that they were similar and the presence or absence of expert evidence did not play a central role in OSIP's determination that there had not been a change in use in either case. As for Janssen's third argument, that argument relates to the next issue and thus I will address it there.

[93] Moreover, while Janssen made much of the fact that Dr. Feagan's evidence was uncontradicted and that OSIP had failed to secure its own expert evidence on the issue of change of use, this ignores the fact that the burden rested on Janssen to demonstrate that it meets the product specificity requirements of the *PMNOC Regulations*. OSIP was under no obligation to produce an expert statement in response to Dr. Feagan or that otherwise addressed the issue of change in issue. As noted by the Respondent, the only obligation on OSIP was to make a reasonable and procedurally fair determination of the issues before them and in doing so, OSIP was entitled to rely on OSIP's own expertise.

[94] I also reject Janssen's submissions that OSIP's interpretation of the product specificity requirement is inconsistent with the context, language and purpose of the *Patent Act* and *PMNOC Regulations*. I begin by noting that there is no express inconsistency between OSIP's interpretation

of subsection 4(3) and the *Patent Act*. Rather, what Janssen asserts is that there is a "conceptual" inconsistency between the two.

[95] It must be recalled that OSIP agreed with Janssen's interpretation of subsection 4(3) in part, expressly acknowledging that a change in use of a medicinal ingredient includes a change to the method of use (as recognized in the 2006 RIAS) and that a change to the method of use can be reflected in sections of the Product Monograph other than the "Indications and Clinical Use" section. Where OSIP and Janssen part ways is on the question of whether a change in use of the medicinal ingredient in subsection 4(3) includes the "change" asserted by Janssen.

[96] It is clear from a review of OSIP's reasons that OSIP was very much alive to the dispute between OSIP and Janssen as to the interpretation of subsection 4(3). In considering the reasonableness of OSIP's interpretation of subsection 4(3), the Court is guided by the following commentary of the Federal Court of Appeal in *Canada (Minister of Citizenship and Immigration) v Mason*, 2021 FCA 156:

> [16] *Hillier* begins by reminding reviewing courts of three basic things they should appreciate when conducting reasonableness review. First, in many cases, administrators may have a range of interpretations of legislation open to them based on the text, context and purpose of the legislation. Second, in particular cases, administrators may have a better appreciation of that range than courts because of their specialization and expertise. And, third, the legislation--the law on the books that reviewing courts must follow--gives administrators the responsibility to interpret the legislation, not reviewing courts.
>
> [17] For these reasons, *Hillier* tells reviewing courts to conduct themselves in a way that gives administrators the space the legislator intends them to have, yet still hold them accountable. Reviewing courts can do this by conducting a preliminary analysis of the text,

context and purpose of the legislation just to understand the lay of the land before they examine the administrators' reasons. But the lay of the land is as far as they should go. They should not make any definitive judgments and conclusions themselves. That would take them down the road of creating their own yardstick and measuring the administrator's interpretation to make sure it fits.

[18] Instead, *Hillier* recommends (at para. 16) that a reviewing court should "focus on the administrator's interpretation, noting what the administrator invokes in support of it and what the parties raise for or against it", trying to understand where the administrator was coming from and why it ruled the way it did: *Hillier* at paragraph 16.

[19] Under this approach, the reviewing court does not act in an "external" way, i.e., "arrive at a definitive conclusion about the best way to read the statutory provision under review before considering how the [administrator's] interpretation matched up with [the] preferred reading". Rather, as Professor Daly has observed, the reviewing court acts in an "internal" way, i.e., "a relatively cursory examination of the provision at issue, with a view to analyzing the robustness of the [administrator's] interpretation". See Paul Daly, "Waiting for Godot: Canadian Administrative Law in 2019" (online: https://canlii.ca/t/t23p at 11).

[20] By necessary implication, *Vavilov* supports the *Hillier* approach. *Vavilov* warns us that even though reviewing courts are accustomed in other contexts to interpret legislative provisions themselves, when conducting reasonableness review of administrative interpretations they should avoid that. Reviewing courts must not "ask how they themselves would have resolved [the] issue", "undertake a *de novo* analysis", "ask itself what the correct decision would have been" or "[decide] the issue themselves": *Vavilov,* at paragraphs 75, 83 and 116. In other words, reviewing courts must not "make [their] own yardstick and then use that yardstick to measure what the administrator did": *Vavilov,* at paragraph 83, citing *Delios,* at paragraph 28. Instead, reviewing courts must exercise "judicial restraint" and respect "the distinct role of administrative decision makers": *Vavilov,* at paragraph 75. They are to do this by examining the administrator's reasons with "respectful attention" and by "seeking to understand the reasoning process": *Vavilov,* at paragraph 84.

[97] Determining the meaning of “change in use of the medicinal ingredient” very much falls within OSIP’s area of expertise. In arriving at their interpretation of that phrase, OSIP considered the plain wording of subsection 4(3) and related provisions of the *PMNOC Regulations* and the intent of the 2006 amendments to subsection 4(3) as reflected in the 2006 RIAS (as cited above) and as acknowledged by the Court of Appeal in *GD Searle & Co v Canada (Health)*, 2009 FCA 35. I see nothing unreasonable with that approach and OSIP’s reasons allow the Court to understand how the text, context and purpose of the *PMNOC Regulations* factored into its reasoning process in arriving at its interpretation of subsection 4(3).

[98] There is no dispute between the parties as to the purpose of the *Patent Act* and the protections that it affords to innovators. However, I reject Janssen’s assertion that OSIP’s interpretation improperly denies Janssen the full benefit of the patent protection it should be provided as part of the balance of the early working exception. As stated above, the *PMNOC Regulations* seek to balance the patent rights associated with innovative drugs against the timely market entry of lower-priced competitor drugs [see *Fresenius Kabi Canada Ltd* v *Canada (Health)*, 2020 FC 1013]. In striking that balance, the product specificity requirements reflected in section 4 inherently acknowledge that not every patent is eligible for listing on the Patent Register, notwithstanding the time and money invested by the innovator. As noted by this Court in *Solvay*, supra at paragraph 69:

> …Under the heading Patent Listing Requirements, the RIAS states, at page 1511, that the NOC Regulations "are intended to operate as a very potent patent enforcement mechanism", citing the 24-month automatic stay when an innovator launches a prohibition application, adding that "it is this very potency which calls for moderation in the application" with the result that "[o]nly those

> patents which meet the current timing, subject matter and relevance requirements set out in section 4 of the regulations are entitled to be added to ... register and to the concurrent protection of the 24-month stay."
>
> [Emphasis added.]

[99] It must also be recalled that Janssen is not without the protections of the *Patent Act* under OSIP's interpretation, retaining the right to bring a patent infringement action outside of the PMNOC regime.

[100] Subsection 4(3) limits the subset of patents eligible for listing and I am not satisfied that Janssen has demonstrated how OSIP's interpretation unreasonably denies Janssen the patent protection intended by the balance struck by the *PMNOC Regulations*.

[101] Having determined that OSIP's decision that SNDS 670 did not meet the first product specificity requirement of paragraph 4(3)(c) was reasonable, Janssen's application in relation to the listing of the 837 patent in relation to SNDS 670 cannot succeed. While I need not do so, I will nonetheless go on to consider whether OSIP's determination in relation to the second product specificity requirement was reasonable.

(2) OSIP's determination that the 837 Patent was not eligible to be added to the Patent Register as it did not meet the product specificity requirements of paragraph 4(3)(c) was reasonable

[102] In considering whether the patent sought to be listed in relation to a particular SNDS meets the product specificity requirement of paragraph 4(3)(c) of the *PMNOC Regulations*, OSIP was

required to apply what is known as the *Abbott* test, as originally set out by Justice Hughes in *Abbott Laboratories Limited v Canada (Attorney General)*, 2008 FC 700 and later affirmed in *Canada (Attorney General) v Abbott Laboratories Limited*, 2008 FCA 354 and applied by the Federal Court of Appeal in a number of other cases, such as *Searle*, *supra*, *Purdue Pharma v Canada (Attorney General)*, 2011 FCA 132, *Gilead Sciences Canada Inc v Canada (Health)*, 2012 FCA 254 and *Eli Lilly Canada Inc v Canada (Attorney General)*, 2015 FCA 166.

[103] Pursuant to the *Abbott* test, OSIP was required to consider the following three questions: (i) what does the 837 Patent claim? (ii) what is the change approved by SNDS 670? and (iii) does the 837 Patent claim the very change approved in SNDS 670?

[104] The current version of the *PMNOC Regulations* makes product specificity between the patent claims and the NOC for the approved drug a key requirement for a patent to be considered eligible for listing on the patent register [see *Gilead*, *supra* at para 33]. Under the prior version of the *PMNOC Regulations*, if the patent claims were shown merely to be "relevant to" the approved drug, the submitted patents were generally accepted for listing. The wording of the current *PMNOC Regulations*, as well as their object and purpose, suggest that the product specificity requirement sets a high threshold of consistency between the patent claims and the NOC [see *Gilead*, *supra* at para 40].

[105] In *Canada* (*Attorney General*) *v Abbott Laboratories Limited*, 2008 FCA 244, leave to appeal refused, [2008] SCCA No 408, [2008] 3 SCR v (*Abbott Prevacid*) [*Abbott 244*], Justice Pelletier commented on the level of specificity required under paragraph 4(3)(*c*). The debate there

concerned the eligibility for listing of a patent in relation to an NOC issued pursuant to an SNDS approving a new use. The Federal Court concluded that the patent was eligible for listing because the patent could be construed as including the new approved use notwithstanding that it was not explicitly claimed in the patent. The Federal Court of Appeal disagreed, stating at paragraphs 47 and 49:

> It stands to reason that if a patent must contain a claim for the changed use identified in Abbott's SNDS, that patent cannot simply claim the use which formed the basis of the original submission. Such a patent does not specifically claim the changed use, even though the changed use may come within the claims of the patent. In other words, the Regulations envisage as a condition of listing a patent in respect of a change in the use of a medicinal ingredient that the patent specifically claims the changed use as opposed to non-specific claims which are wide enough to include the changed use.
>
> […]
>
> I conclude that paragraph 4(3)(*c*) of the Regulations requires, as a condition of listing a patent on the Patent Register, that the patent must specifically claim the very change in use which was approved by the issuance of a Notice of Compliance with respect to an SNDS.
>
> [Emphasis added.]

[106] Before turning to Janssen's submission on this application, I note that before OSIP, Janssen asserted:

> Further and contrary to the clear wording of the *Regulations*, which simply requires "a claim for the changed use … that has been approved", in its Letter, the OPML instead identified what it framed as the very change approved in SNDS 244670 and asked whether the '837 Patent claims the "very change" approved in SNDS 244670. In doing so, the OPML's approach was too narrow and required a nexus between the change approved in SNDS 244670 and

> the ‘837 Patent that is more stringent than what is in fact required by the *Regulations*.

[107] Janssen’s aforementioned description of the product specificity requirement for the 837 Patent as prescribed by subsection 4(3) is reflective of the approach prior to the 2006 amendments to the *PMNOC Regulations* and inconsistent with the clear enunciation of the applicable test as affirmed repeatedly by the Federal Court of Appeal.

[108] Before this Court, Janssen persists with this position in part, refusing in its written submissions to agree with OSIP’s interpretation of subsection 4(3) and its application of the *Abbott* test, yet taking no issue with the application of the *Abbott* test at the hearing. There is no merit to any suggestion that OSIP has misconstrued the applicable legal test and I find that OSIP properly formulated and applied the *Abbott* test by requiring that the 837 Patent claim the “very change in use” approved for SNDS 670.

[109] Without agreeing with OSIP’s interpretation of the requirements of subsection 4(3), Janssen asserts that OSIP’s decision is unreasonable as the 837 Patent meets the “very change in use” standard, as the 837 Patent contains claims covering the [redacted].

[110] [redacted] do not take issue with OSIP’s determination in relation to step one of the *Abbott* test and [redacted], in simple terms, the 837 Patent claims the use of the antibody to treat ulcerative colitis for at least 44 weeks after week zero or for 44 weeks and after.

[111] For step two of the *Abbott* test, one would have to presume that the change in use is as proposed by Janssen (albeit rejected by OSIP) – namely, the addition of longer term safety data up to 96 weeks that changes prescribing practise so as to prescribe STELARA beyond 44 weeks.

[112] It is at step three of the *Abbott* test that the parties' positions regarding the reasonableness of OSIP's determination greatly diverge. I will begin with OSIP's reasons for decision on step three, which provide as follows:

> The '837 Patent does not contain a claim to the very change for which SNDS 244670 was approved. In particular, the '837 patent does not contain a claim directed toward the use of ustekinumab for the treatment of moderately to severely active ulcerative colitis wherein ustekinumab is administered for 96 weeks as maintenance therapy.
>
> As explained above and as set out by the Federal Court of Appeal in *Abbott FCA* and *Searle FCA*, in order to meet the requirements of paragraph 4(3)(c) of the *PM(NOC) Regulations*, the patent must contain a claim to the very changed use. While the '837 patent contains claims directed towards the use of ustekinumab for the treatment of moderately to severely active ulcerative colitis, the duration of time within which the use of ustekinumab is claimed as a maintenance therapy is not limited to 96 weeks. The OSIP is of the view that reference at page 52 of the '837 patent description that the anti-IL-12/IL-23p40 antibody, which may be ustekinumab, could be administered for a total of two years does not restrict the duration of time within which the anti-IL-12/IL-23p40 antibody could be used in any of the 837 patent claims.

[113] Janssen asserts that OSIP unreasonably imposed a standard of "exact matching" between claim language. Janssen asserts that it was sufficient that the claims of the 837 Patent include [redacted]

[114] Janssen asserts that OSIP placed unreasonable reliance on *Abbott 244*, which Janssen asserts is distinguishable from this case. Janssen asserts that in *Abbott 244*, the issue was whether a patent with claims to the treatment of ulcers generally claimed the very change in an SNDS approved for a new use of a drug to treat ulcers caused by non-steroidal anti-inflammatory drugs. In that case, the Court held that the patent did not specifically claim the changed use even though the changed use may come within the claims of the patent. By contrast, Janssen asserts that at least some of the 837 Patent's claims provide the required specificity [redacted]

[115] Janssen further asserts that *Solvay* is distinguishable, as none of the claims of the patent at issue contained a claim directed to the duration of treatment. By contrast, Janssen asserts that the 837 Patent has "claims that include [redacted]

[116] Janssen urged the Court to find that the circumstances in *Eli Lilly Canada Inc v Canada (Attorney General)*, 2015 FCA 166, were more akin to those in this case and that OSIP should have followed *Eli Lilly* rather than *Abbott 244* (despite Janssen not raising either authority with OSIP). In *Eli Lilly*, one of the issues before the Federal Court of Appeal was whether this Court had erred in determining whether the formulation claimed in the relevant patent was the formulation found in the appellant's drug submission for Trifexis. Janssen asserts that *Eli Lilly* is instructive as the Federal Court of Appeal held that a claim to a broader class of compound includes a specific compound in that class.

[117] I am not satisfied that Janssen has established that OSIP's determination regarding step three of the *Abbott* test is unreasonable. Rather, what Janssen urges the Court to do is to reassess the issue and come to a different result, which is not the role of the Court on an application for judicial review.

[118] I find that there was nothing unreasonable in OSIP's reliance on *Abbott 244*, which was a paragraph 4(3)(c) case. While Janssen urges the Court to find that *Eli Lilly* has somehow "overtaken" *Abbott 244*, I am not satisfied that that is the case. *Eli Lilly* was a change in formulation case, not a change in use case and on that basis alone, I find that it is distinguishable. More specifically, I agree with the Respondent that in *Eli Lilly*, at the first step of the *Abbott* test, the Federal Court of Appeal found that the general class of compounds that the patent claimed actually included the very specific formulation that was approved in the NDS. The Federal Court of Appeal found that in such circumstances, this Court was unreasonable in requiring identical wording at step three of the *Abbott* test. The circumstances in this case are distinct.

[119] As confirmed in *Abbott 244*, the *PMNOC Regulations* require that a patent specifically claim the change in use, as opposed to broader claims that are wide enough to subsume the specific change in use. With that principle in mind, I see nothing unreasonable in OSIP's determination that a patent having broad "temporal features" (as described by Janssen) for the use of ustekinumab for an indefinite period of time (for 44 weeks or more) is not the very change in use approved in relation to SNDS 670 (even on Janssen's interpretation thereof) which specifically included safety data to only 96 weeks.

[120] With respect to *Solvay*, I note that OSIP did not refer to *Solvay* in its reasons for decision on this issue.

[121] Accordingly, even if Janssen had established that OSIP's decision in relation to a "change in use of the medicinal ingredient" was unreasonable, Janssen's application in relation to the listing of the 837 patent in relation to SNDS 670 could not succeed on this ground either.

(3) OSIP's determination that Janssen failed to provide a patent list in relation to SNDS 739 was reasonable

[122] Janssen asserts that OSIP's determination that Janssen failed to file a patent list for the 837 Patent in relation to SNDS 739 was unreasonable as a patent list was filed for the 837 Patent within 30 days of the issuance of the 837 Patent and Janssen sought, by way of its September 14, 2022 submission, to add SNDS 739 to an already submitted patent list, given that it had been raised by OSIP in its preliminary decision letter. Janssen asserts that subsection 4(7) of the *PMNOC Regulations* obligates a first person to keep their patent list up to date, so the Minister clearly contemplated amendments to a patent list.

[123] Moreover, Janssen asserts that the *PMNOC Regulations* do not contain a requirement to add to a patent list by using Form IV, but rather only that a first person must provide all of the information set out in subsection 4(4). Janssen submits that its September 14, 2022 submission provided all of the necessary information prescribed by subsection 4(4). As such, to refuse to add the 837 Patent to the Patent Register on the basis that Janssen did not provide the same information

by way of a Form IV would be an unreasonably harsh result and an extreme example of "form over substance".

[124] Turning to OSIP's reasons for decision, OSIP held:

> The *PM(NOC) Regulations* do not permit a patent list to be submitted in relation to multiple submissions. As noted above, subsection 4(1) of the *PM(NOC) Regulations* allows a first person to seek to add a patent to the Patent Register by submitting a patent list to the Minister. The content of a patent list is prescribed by subsection 4(4). Notably, paragraph 4(4)(a) of the *PM(NOC) Regulations* requires that the patent list identify the submissions to which the patent list relates. The patent list submitted in accordance with 4(6) provides a section dedicated for this purpose and allows the first person to identify the submission in relation to which it submits the patent list.
>
> The patent lists submitted by Janssen seeking to add the '837 patent to the Patent Register identified SNDS 244670. Janssen did not seek to add the '837 patent to the Patent Register against SNDS 224739. Janssen's suggestion that the submission in relation to which a patent list was filed can shift after its receipt would ignore the operation of paragraph 4(4)(a) of the *PM(NOC) Regulations*. The statements made on page 7 of Janssen's representations purporting to change the submission in relation to which its patent lists were submitted are not akin to filing a patent list in accordance with subsection 4(1). As such, the OSIP is of the view that no patent list was filed in relation to SNDS 224739 and that Janssen has not met the requirements to seek to add the '837 patent against SNDS 224739.
>
> In addition, the OSIP disagrees with Janssen's view that the '837 patent was considered for addition to the Patent Register against SNDS 224739 in its preliminary decision letter dated July 29, 2022. Rather, the OSIP is of the view that the use for which SNDS 224739 was approved was included in its preliminary decision letter to contextualize the change for which SNDS 244670 was approved.

[125] I see nothing unreasonable in OSIP's analysis and determination of this issue. OSIP properly considered the requirements of subsection 4(4) of the *PMNOC Regulations*, noting that the regulations prescribe one SNDS per patent list (as also set out in Form IV) and to permit Janssen to add a second SNDS to a pre-existing patent list would run afoul of the express mandatory language of paragraph 4(4)(a), which limits a patent list to one SNDS.

[126] Moreover, I find nothing unreasonable in OSIP's determination that Janssen's attempt to change/amend the SNDS in relation to which its patent lists for the 837 Patent were submitted was not akin to filing a patent list. Janssen was well aware of the requirement to file one patent list per SNDS, given that it had already filed multiple Form IVs in relation to STELARA and given the language of paragraph 4(4)(a). Why Janssen did not file a patent list for SNDS 739 in relation to the 837 Patent is unknown, but Janssen is bound by the consequences of that decision.

[127] While not expressly addressed by OSIP, I would note that, even if I were inclined to find that Janssen's September 14, 2022 submission could constitute a patent list for the 837 Patent, Janssen's September 14, 2022 submission did not, in fact, contain all of the information required by subsection 4(4) of the *PMNOC Regulations*. For example, the submission does not set out the Canadian patent filing date, the patent issue date, the patent expiry date or the address for service of the first person of a NOA. While that information might otherwise be available to OSIP in other documents, there is no obligation on the part of OSIP to search for missing information. Rather, the obligation rested on Janssen to clearly identify all of the information required by subsection 4(4) in its "patent list" [see *Hoffmann-La Roche Ltd v Canada (Health)*, 2005 FC 1415 at para 21].

[128] As acknowledged by Janssen in its written submissions, the Minister has the discretion to determine the manner in which a patent list is to be submitted and the Minister has done so by requiring the use of Form IV. Form IV requires that, in completing the form, a first person provide all of the mandatory information required by subsection 4(4) of the *PMNOC Regulations*. Janssen has pointed to nothing that is unreasonable about the Minister's adoption of Form IV or the Minister's requirement that it be completed by first persons. Rather, Janssen appears to be inviting the Court to find that it was open to the Minister to accept a deviation to the Minister's practices, but without pointing to any error made by the Minister or any lack of coherent and rational chain of analysis in the Minister's determination.

[129] Janssen further asserts that in footnote 2 of its September 14, 2022 submission, Janssen requested that if OSIP rejected their request to add SNDS 739 to the patent list for the 837 Patent, that Janssen be advised of the reason and given an opportunity to respond. Janssen asserts that their procedural fairness rights were breached as OSIP never gave them a chance to address the issue. I reject this assertion. I am not satisfied that OSIP was under any duty to alert Janssen as to its views on Janssen's failure to file a Form IV patent list for SNDS 739 and to provide Janssen an opportunity to make further submissions on the issue. The burden rested on Janssen to take the appropriate steps to submit a patent list for the 837 Patent in relation to each of its SNDSs within the time limits prescribed by the *PMNOC Regulations* and in any event, by September 14, 2022, the deadline for submission of a patent list for the 837 Patent for SNDS 739 had already passed.

[130] In its reply oral submissions, Janssen asserted that it also relied on section 32 of the *Interpretation Act*, RSC 1985, c I-21, which provides that "where a form is prescribed, deviations

from that form, not affecting the substance or calculated to mislead, do not invalidate the form used" and identified two decisions of the Federal Court addressing section 32. This argument, and the related statute and case law, were not raised by Janssen in its memorandum of fact and law filed in this proceeding (nor were they raised in Janssen's submissions before OSIP) and did not arise from something unexpectedly raised by the Respondent in their oral submissions. In the circumstances, it is not open to Janssen to raise the argument now and most certainly inappropriate to attempt to raise it only in reply. Accordingly, I will not consider this portion of Janssen's submission, as to do so would be unfair to the Respondent.

[131] For the reasons stated above, I am not satisfied that Janssen has demonstrated that OSIP's determination that Janssen did not file a patent list for the 837 Patent for SNDS 739 was unreasonable. While I appreciate that Janssen views the impact of OSIP's determination of this issue as unreasonably harsh, the *PMNOC Regulations* contain numerous mandatory requirements (such as the 30 day requirement in subsection 4(6)) that result in harsh consequences when not met. This is a function of the nature of the regulatory regime [see *Fournier Pharma Inc v Canada (Attorney General)*, [1999] 1 FC 327; *Immunex Corporation v Canada (Health)*, 2008 FC 1409; *Merck Canada Inc v Canada (Minister of Health)*, 2021 FC 345].

[132] My finding on this issue is sufficient to dispose of Janssen's application for judicial review in relation to OSIP's refusal to list the 837 Patent in relation to SNDS 739. Notwithstanding, I will nonetheless go on to consider whether the Canadian filing date requirement in subsection 4(6) of the *PMNOC Regulations* is *ultra vires* the *Patent Act*.

B. The Canadian Filing Date Requirement in Subsection 4(6) of the *PMNOC Regulations* is *intra vires* the *Patent Act*

[133] Notwithstanding OSIP's determination that no patent list had been filed for the 837 Patent in relation to SNDS 739, OSIP went on to consider whether the 837 Patent could have been listed against SNDS 739 if such a patent list had been provided. OSIP determined that Janssen would not have met the timing requirement in subsection 4(6) as the 837 Patent was filed in Canada after SNDS 739 was filed. OSIP further determined that the consideration of the claim date or priority date of the 837 Patent when assessing the application of subsection 4(6) would be to ignore the clear wording of the *PMNOC Regulations* (which states "filing date in Canada"), circumvent the strict timing requirements and undo the balance struck by the *PMNOC Regulations* and subsection 55.2(1) of the *Act*.

[134] Janssen does not take issue with OSIP's interpretation of subsection 4(6) and acknowledges that the filing date requirement in subsection 4(6) refers to the date that the patent application was filed in Canada, rather than the claim date or priority date. Rather, Janssen asserted before OSIP and now before this Court that the filing date requirement in subsection 4(6) is *ultra vires*.

[135] In the alternative, Janssen asserts that the Canadian filing date is an illogical, irrational and/or arbitrary date to employ in subsection 4(6). However, Janssen did not, in its written submissions and at the hearing, develop these arguments and as such, I will not consider them separately. Rather, I will consider the arguments as they were advanced by Janssen.

[136] In conducting a reasonableness review of this issue, the Court is to determine the constraints on the Governor in Council and whether the Governor in Council remained within them, with the focus on any reasons given by the Governor in Council.

[137] In this case, the parties agree that the primary constraint on the Governor in Council is subsection 55.2(4) of the *Patent Act* (as set out above), which contains the Governor in Council's regulation making authority. Section 55.2(4) of the *Patent Act* provides for a broad grant of authority for the making of such regulations as the Governor in Council "considers necessary for preventing the infringement of a patent" by any person who makes use of the early working exception. The specific authority outlined in paragraphs (a) to (e) is said not to limit the generality of the initial grant. Rather, the only limitation lies in the limited purpose for which regulations may be made – the prevention of infringement by those who use the patented invention for the early working exception [see *Apotex Inc v Merck & Co Inc*, 2009 FCA 187 at para 40]. As such, in enacting the *PMNOC Regulations*, the Governor in Council had to interpret the scope of its regulation making power and enact a regulation (subsection 4(6)) that, in its reasonable view, was within that power [see *Innovative Medicines*, *supra* at para 44].

[138] In considering Janssen's submissions, I note that Janssen does not assert that including a reference to a filing date of the patent in subsection 4(6), in and of itself, exceeds the Governor in Council's regulation making authority. In that regard, I note that Janssen originally sought to quash the entirety of subsection 4(6) but, at the hearing, substantially modified the relief sought and now only seeks the quashing of the words "that has a filing date in Canada". This is an important point, as Janssen concedes that the Governor in Council has the authority to enact a regulation that

includes a filing date requirement. This is not necessarily surprising given this Court's determination in *Fournier*, *supra* at para 20, that the Governor in Council's authority and discretion in subsection 55.2(4) are sufficiently broad to embrace the enactment of subsections 4(3) and 4(4) of the *PMNOC Regulations*, which impose time limits on the registration of patent lists.

[139] On Janssen's wording, section 4(6) would read as follows:

> A first person may, after the date of filing of a new drug submission or a supplement to a new drug submission, and within 30 days after the issuance of a patent that was issued on the basis of an application that precedes the date of filing of the submission or supplement, submit a patent list, including the information referred to in subsection (4), in relation to the submission or supplement.

[140] Janssen's argument therefore boils down to an assertion that the specific choice of the Canadian filing date over the claim date or priority date is *ultra vires*. In that regard, Janssen asserts that the Canadian filing date requirement does not conform with the purpose of the *Patent Act* and the *PMNOC Regulations*.

[141] Turning to the purpose of the *Patent Act*, Justice Manson described its purpose as follows in *Innovative Medicines*:

> [76] The policy rationale underlying the *Patent Act* is the patent bargain, or *quid pro quo*. The patent bargain encourages innovation by offering an inventor exclusive rights in a new and useful invention for a limited period in exchange for disclosure of the invention so that society can benefit from this knowledge (*Teva Canada Ltd v Pfizer Canada Inc*, 2012 SCC 60, [2012] 3 S.C.R.

> 625, at paragraph 32). Two central objectives of the *Patent Act* as a whole are to "advance research and development and to encourage broader economic activity" (*Free World Trust v Électro Santé Inc*, 2000 SCC 66, [2000] 2 S.C.R. 104 at paragraph 42; *Harvard College v Canada (Commissioner of Patents)*, 2002 SCC 76, [2002] 4 S.C.R. 45 (Harvard College) at paragraph 185).
>
> [77] As acknowledged by both the applicants and the respondent, patent monopoly rights are not unlimited, and Parliament has at times balanced promotion of ingenuity against other considerations (*Harvard College*, above, at paragraph 185)…

[142] The purpose of the *PMNOC Regulations*, as noted previously, is to balance effective patent enforcement over new and innovative drugs with the timely market entry of their lower priced generic competitors.

[143] Only limited information is known about the rationale for the Governor in Council's choice to use the Canadian patent filing date. The 2006 RIAS indicates that the Government was aware that "an increasing number of court decisions interpreting the PM(NOC) Regulations have given rise to the need to clarify the patent listing requirements" and that these decisions addressed issues of timing and relevance.

[144] Among those decisions was Justice Blanchard's decision in *Pfizer Canada Inc v Canada (Attorney General) (TD)*, 2002 FCT 706, in which the Court was considering an earlier version of subsection 4(4) of the *PMNOC Regulations* which provided:

> A first person may, after the filing of a submission for a notice of compliance and within 30 days after the issuance of a patent that was issued on the basis of an application that has a filing date that precedes the date of filing of the submission, submit a patent list, or

> an amendment to an existing patent list, that includes information referred to in subsection (2).

[145] The issue before the Court was whether the "filing date" in subsection 4(4) should be interpreted to be the priority filing date (in that case, the date of filing in the United States) or the Canadian filing date. The Minister had determined that "filing date" meant the Canadian filing date. The Applicants advanced a number of arguments in support of their assertion that "filing date" meant the priority filing date, including that the Minister's interpretation would place patentees who file their patent applications first in a country other than Canada at a disadvantage compared to patentees who choose to file first in Canada and results in a loss of rights during the priority period. In rejecting the Applicant's submissions, Justice Blanchard stated:

> [50] At the risk of stating the obvious, the *Patent Act* is Canadian legislation and provides for the grant of a patent to an inventor, "if an application for the patent in Canada is filed" (see subsection 27(1) [as am. *idem*, s. 31] of the *Patent Act*). Moreover, the *Patent Act* specifically defines "filing date" to be the Canadian filing date. In my view, any reference to "filing date" in the Act, or in the Regulations thereunder, must be read with regard to this definition. Such an interpretation is consistent with other provisions of the *Patent Act* and the Regulations which, for the most part, explicitly set out, in the context of the specific section, when "filing date" is meant as a date other than the Canadian filing date.

[146] Given the *Pfizer* decision, the Government was accordingly well aware of the issue raised by stakeholders as to the use of the Canadian filing date and the consequences thereof and engaged in consultations with stakeholders prior to the enactment of the current version of subsection 4(6) during which submissions could be made by stakeholders on this issue. The Governor in Council ultimately decided, in enacting subsection 4(6), to expressly include the Canadian filing date.

[147] With respect to subsection 4(6), the only commentary thereon in the 2006 RIAS provides as follows:

> By stipulating that the application filing date of the patent precede the date of the corresponding drug submission, the timing requirement promotes a temporal connection between the invention sought to be protected and the product sought to be approved. This ensures that patents for inventions discovered after the existence of a product do not pre-empt generic competition on that product.

[148] No express rationale is given in the 2006 RIAS as to why the Canadian filing date was specifically chosen. In its reasons for decision, OSIP notes that the Governor in Council chose for subsection 4(6) to refer to the first date of a patent term, as opposed to a date relevant to considerations of novelty, inventiveness or prior use and that this was a deliberate choice.

[149] Janssen asserts that the choice of the Canadian filing date is inconsistent with the aforementioned purpose of the timing requirement (namely, to prevent patents for inventions discovered after the existence of a product from pre-empting generic competition on that product), as the date of the invention's discovery is actually the claim date and not the Canadian filing date. Janssen stresses that the claim date (which is defined in sections 2 and 28.1 of the *Patent Act*) is the relevant date in several sections of the *Patent Act*, including those directed at novelty, inventiveness and the prior use defence, which are concepts at the core of an invention, and demonstrate that within the overall scheme of the *Patent Act*, the invention sought to be protected is linked to the claim date.

[150] Further, Janssen asserts that the selection of the Canadian filing date fails to advance effective enforcement of patents that would be infringed by the use of the early-working exception, such that there is no rational connection between the early-working exception and the requirement that a Canadian patent application be filed before a drug submission to be listed.

[151] I am not convinced by Janssen's submissions. While the 2006 RIAS expresses a rationale for subsection 4(6), the expressed rationale is in regard to why the filing of the patent application must occur before the submission of the SNDS. It was about the sequencing of the patent application and the SNDS, not about the rationale for picking the Canadian filing date over the claim date.

[152] The Governor in Council was well aware that since 1998, the Minister has "sought to apply the amendments on timing and relevance in order to place reasonable limits on the ability of innovator drug companies to list new patents on the basis of SNDS filings" [see 2006 RIAS] and that:

> It is recognized that there may be instances where a patent which does not qualify for the protection of the PM(NOC) Regulations is ultimately infringed by the fact of generic market entry. However, the Government's view is that where the patent fails to meet the listing requirements described above, policy considerations tip the balance in favour of immediate approval of the generic drug, and the matter is better left to the alternative judicial recourse of an infringement action. It follows that the continued viability of the regime greatly depends upon the fair and proper application of these listing requirements.
>
> [Emphasis added.]

[153] The Governor in Council made a choice that struck a particular balance between the PMNOC regime's competing objectives. The enactment of subsection 4(6) was within the Governor in Council's regulation making authority. As recognized by the Federal Court of Appeal in *Innovative Medicines*, having acted within the limits of the statutory language, the Governor in Council's regulation-making power is relatively unconstrained and it certainly falls within Governor in Council's purview to make policy-based choices such as this when deciding the balance to be struck. Could the Governor in Council have chosen to use the claim date in subsection 4(6)? Certainly. But the balance chosen by the date selected need not be perfect and it is not the role of the Court on this application to consider whether a different balance (as urged by Janssen) could have or ought to have been struck [see *Sanofi-Aventis Canada Inc v Teva Canada Limited*, 2012 FC 551 at para 24]. The burden rested on Janssen to demonstrate that the inclusion of the Canadian filing date was not in pursuance of and connected with the prevention of patent infringement and I am not satisfied that they have done so. Rather, I am satisfied that requiring that a patent meet certain timing requirements based on its Canadian filing date, which ensures timely market entry of subsequent generic drugs, is reasonably in keeping with the balance of the competing policy interests at issue.

[154] In some circumstances, the operation of the regulatory regime may benefit a subsequent entry drug manufacturer and in others, the innovator, depending on when the innovator choses to file their patent application in Canada. However, I am not satisfied that this renders subsection 4(6) *ultra vires* or otherwise arbitrary, illogical or irrational. I agree with the Respondent that, in Janssen's view, the language chosen by the Governor in Council must be the most beneficial to innovators in order to be rationally connected to the purpose of the *Patent Act* and the *PMNOC*

Regulations. But such an approach ignores the balancing of interests that must be undertaken. Moreover, it also ignores that innovators (whose patents benefit from a priority application) who chose to file their Canadian patent after their SNDS retain their right to bring patent infringement actions under the *Patent Act* regime and are not deprived of the benefit of their priority date in such actions.

[155] Janssen bears the burden of demonstrating that the Governor in Council's inclusion of the Canadian filing date in subsection 4(6) was unreasonable. For the reasons stated above, I am not satisfied that they have done so.

V. Conclusion

[156] Having found that Janssen has failed to demonstrate that any aspect of OSIP's decision is unreasonable and that the Canadian filing date requirement in subsection 4(6) of the *PMNOC Regulations* is *ultra vires*, illogical, irrational or arbitrary, the application for judicial review shall be dismissed.

VI. Costs

[157] At the hearing of the application, the parties advised that they agreed that the successful party should be awarded their costs fixed in the amount of $7,500.00. As the Respondents were

successful on the application, they shall be awarded their costs in accordance with the parties' agreement.

JUDGMENT in T-2627-22

THIS COURT'S JUDGMENT is that:

1. The application for judicial review is dismissed.

2. The Applicant shall pay to the Respondents their costs of this application fixed in the amount of $7,500.00, inclusive of disbursements and taxes.

"Mandy Aylen"
Judge

FEDERAL COURT

B E T W E E N:

(Court Seal)

JANSSEN INC.

Applicant

- and -

THE MINISTER OF HEALTH and ATTORNEY GENERAL OF CANADA

Respondents

APPLICATION UNDER sections 18 and 18.1 of the *Federal Courts Act*, R.S.C. 1985, c. F-7, as amended.

NOTICE OF APPLICATION

TO THE RESPONDENTS:

A PROCEEDING HAS BEEN COMMENCED AGAINST YOU by the Applicant. The relief claimed by the Applicant appears below.

THIS APPLICATION will be heard by the Court at a time and place to be fixed by the Judicial Administrator. Unless the Court orders otherwise, the place of hearing will be as requested by the Applicant. The Applicant requests that this application be heard at Toronto, Ontario.

IF YOU WISH TO OPPOSE THIS APPLICATION, to receive notice of any step in the application or to be served with any documents in the application, you or a solicitor acting for you must file a notice of appearance in Form 305 prescribed by the *Federal Courts Rules* and serve it on the Applicant's solicitor or, if the Applicant is self-represented, on the Applicant, WITHIN 10 DAYS after being served with this notice of application.

Copies of the *Federal Courts Rules*, information concerning the local offices of the Court and other necessary information may be obtained on request to the Administrator of this Court at Ottawa (telephone 613-992-4238) or at any local office.

IF YOU FAIL TO OPPOSE THIS APPLICATION, JUDGMENT MAY BE GIVEN IN YOUR ABSENCE AND WITHOUT FURTHER NOTICE TO YOU.

APPLICATION

This is an Application for judicial review pursuant to sections 18 and 18.1 of the *Federal Courts Act*, R.S.C. 1985, c. F-7, as amended, in respect of a decision of the Office of Submissions and Intellectual Property ("**OSIP**"), on behalf of the Minister of Health (the "**Minister**"). By letter dated November 15, 2022, the Minister advised the Applicant that its patent list for submission nos. 224739 and 244670 for Canadian Patent No. 3,113,837 (the "'**837 Patent**") and the drug STELARA® (including STELARA I.V.) ("**STELARA**") are not eligible for listing on the Patent Register for failing to meet the listing provisions under subsections 4(3) and/or 4(6) of the *Patented Medicines (Notice of Compliance) Regulations*, SOR/93-133, as amended (the "***PM(NOC) Regulations***") (the "**Decision**").

THE APPLICANT MAKES APPLICATION FOR:

1. The Applicant seeks relief as follows:

   (a) An order quashing or setting aside the Minister's Decision refusing to list the '837 Patent on the Patent Register in respect of STELARA;

   (b) A declaration that the '837 Patent is/was eligible for listing on the Patent Register in respect of STELARA as of:

      (i) July 19, 2022;

      (ii) In the alternative, September 14, 2022; or

      (iii) In the further alternative, the date of the decision of this Court on this Application;

(c) A declaration pursuant to subsection 4.1(2) of the *PM(NOC) Regulations* that the patent list be carried forward and the ’837 Patent be listed on the Patent Register in respect of any supplementary new drug submissions (“**SNDS**”) filed for STELARA;

(d) An order directing the Minister to list the ’837 Patent on the Patent Register in respect of STELARA, as of the date determined in (b);

(e) In the alternative to (b), (c) and (d), an order referring the matter back to the Minister for redetermination on proper principles as to whether the ’837 Patent is eligible for listing on the Patent Register in respect of STELARA;

(f) An order in the nature of *certiorari* quashing section 4(6) of the *PM(NOC) Regulation* on the basis that it is *ultra vires* the authority granted to the Governor General in Council by the *Patent Act*, and is without any legal force or effect to the extent that it refers to a patent’s “filing date” as opposed to its “claim date”;

(g) Costs of this application; and

(h) Such further and other relief as counsel may advise and this Honourable Court may permit.

THE GROUNDS FOR THE APPLICATION ARE:

A. Overview

2. The Minister’s decision that the ’837 Patent is ineligible for listing on the Patent Register in respect of STELARA was unreasonable.

3. The Minister erred in determining that the ’837 Patent did not satisfy product specificity requirements in subsection 4(3) of the *PM(NOC) Regulations*, in respect of SNDS 244670. The Minister also erred in determining that the ’837 Patent did not satisfy the timing requirements in subsections 4(6) of the *PM(NOC) Regulations*, in respect of SNDS 224739.

4. In addition and/or in the alternative, in respect of SNDS 224739, subsection 4(6) is *ultra vires* the scheme and purpose of the *Patent Act* and *PM(NOC) Regulations,* and is without any legal force or effect to the extent that it refers to a patent’s “filing date” as opposed to its “claim date”.

5. The ’837 Patent is listable in respect of SNDS 224739 and SNDS 244670. SNDS 224739 added the ulcerative colitis indication to STELARA. SNDS 244670 added safety data relevant to the ulcerative colitis indication that – according to an expert statement – changed prescribing practices of clinicians with respect to STELARA. Both submissions therefore contain a change in use that allows for the listing of a patent on the Patent Register under subsection 4(3).

6. Further, the ’837 Patent contains claims to the change in use in both SNDS 224739 and SNDS 244670. The ’837 Patent thus meets the product specificity requirements in subsection 4(3) of the *PM(NOC) Regulations*, which require that the patent contain a claim for the medicinal ingredient, formulation or use which has been approved through the issuance of a Notice of Complaince (“**NOC**”) in respect of a submission. There is no dispute that the ’837 Patent meets the timing requirements in subsection 4(6) of the *PM(NOC) Regulations* in respect of SNDS 244670. Therefore, the Minister’s Decision not to list the ’837 Patent in respect of SNDS 244670 is unreasonable and should be overturned.

7. In addition and/or in the alternative, in respect of SNDS 224739, subsection 4(6) is *ultra vires* the scheme and purpose of the *Patent Act* and *PM(NOC) Regulations* because the designation of the "filing date" in subsection 4(6) of the *PM(NOC) Regulations* bears no rational connection with the object of the *Patent Act.* The appropriate date is the claim date of a patent, as defined in sections 2 and 28.1 of the *Patent Act*.

8. The claim date of the '837 Patent meets the timing requirements in subsection 4(6) of the *PM(NOC) Regulations* in respect of SNDS 224739.

9. Accordingly, the '837 Patent should be found eligible for listing on the Patent Register in respect of STELARA.

B. STELARA

10. STELARA is a Schedule D biologic drug containing the medicinal ingredient ustekinumab. STELARA was first approved in Canada in December 2008 for the treatment of psoriasis.

11. Since that time, STELARA has gained approvals for several other important indications and is now used to treat plaque psoriasis, active psoriatic arthritis, moderately to severely active Crohn's disease and moderately to severely active ulcerative colitis.

12. Most relevant to this Application is the indication relating to ulcerative colitis, i.e. the treatment of adult patients with moderately to severely active ulcerative colitis who have had an inadequate response with, lost response to, or were intolerant to either conventional therapy or a biologic or have medical contraindications to such therapies.

13. There are currently no patents listed on the Patent Register for STELARA pursuant to the *PM(NOC) Regulations*. Canadian Patent No. 2,418,961 ("'**961 Patent**") was previously listed on

the Patent Register in respect of STELARA until its expiry on August 9, 2021. The ’961 Patent did not contain any claims for use of ustekinumab for the treatment of ulcerative colitis. No other patents have previously been listed against STELARA.

14. As there are no patents currently listed on the Patent Register in respect of STELARA (and STELARA no longer benefits from data protection) there is an increased need for the ’837 Patent to be listed on the Patent Register quickly. Under the current circumstances, the Applicant cannot benefit from the rights provided by the *Patent Act* and the *PM(NOC) Regulations* when a subsequent entrant seeks market approval. In addition, the public – including any subsequent entrant – currently has no notice that the ’837 Patent is sought to be listed on the Patent Register in respect of STELARA. As such the Applicant seeks to expedite this Judicial Review.

C. The ’837 Patent

15. The ’837 Patent is entitled “Safe and effective method of treating ulcerative colitis with anti-IL12/IL23 antibody”. The ’837 Patent application was filed on September 24, 2019 and issued on July 12, 2022, and it was submitted for listing on the Patent register on July 25, 2022. It claims priority from three U.S. applications, the earliest of which was filed on September 24, 2018, and is the relevant claim date. It will expire on September 24, 2039.

16. The ’837 Patent is generally directed to the use of an anti-IL-12/IL-23p40 antibody, including ustekinumab, for the treatment of moderately to severely active ulcerative colitis in a subject in need thereof, wherein the subject may have previously failed or was intolerant of at least one enumerated therapy or the subject had demonstrated corticosteroid dependence.

17. The ’837 Patent describes a long-term study extension that will continue through Week 220 (page 73, lines 27-29) and claims the use of ustekinumab wherein the subject experiences

clinical remission, healing and clinical response in accordance with the enumerated measures "at least 44 weeks after week 0" (for example, claims 10-18, 44-52).

D. The SNDSs Against Which the '837 Patent is Sought to be Listed

18. The '837 Patent is sought to be listed in respect of SNDS 224739 and/or SNDS 244670.

(i) SNDS 224739

19. The indication for the treatment of moderately to severely active ulcerative colitis was first approved in SNDS 224739.

20. SNDS 224739 was filed on February 15, 2019 and approved on January 23, 2020 (a revised NOC was issued on February 20, 2020). Thus, SNDS 224739 was filed *before* the filing of the '837 Patent (September 24, 2019) but *after* the relevant claim date (September 24, 2018).

(ii) SNDS 244670

21. SNDS 244670 was approved for updates to the Product Monograph for STELARA. SNDS 244670 was submitted, *inter alia*, to provide data on safety and efficacy of STELARA through two years of treatment in subjects with moderately to severely active ulcerative colitis.

22. SNDS 244670 was filed on October 1, 2020 and approved on September 9, 2021. Thus, SNDS 244670 was filed after both the filing date and the relevant claim date of the '837 Patent.

23. The Product Monograph approved as part of SNDS 244670 (date of revision September 21, 2020) includes additional data relating to the ulcerative colitis indication that is the subject matter of claims of the '837 Patent and described in the specification. The additions to the Product Monograph address treatment with and safety of ustekinumab in ulcerative colitis patients beyond 44 weeks.

E. The Governing Statute: The *Patent Act*

24. The object and purpose of the *Patent Act* is to promote innovation by granting patentees a time limited monopoly. The monopoly granted pursuant to the *Patent Act* provides a patentee with the exclusive right and liberty to make, use and sell the invention during the term of the patent in exchange for disclosure of new and useful innovations. Patents are granted for new, useful and inventive subject matter, including incremental inventions. Once issued, patents are presumed to be valid.

25. The *Patent Act* provides for protection of inventions from the earliest date upon which the applicant can claim priority to the claimed invention. As such, section 28.1 of the *Patent Act* defines claim date as the filing date, or if a priority application exists, the priority date.

26. The ability of patentees to claim and benefit from priority is critical to the patent bargain, and central to the *Patent Act*. It must therefore be maintained in any subordinate legislation like the *PM(NOC) Regulations.*

F. The Patent-Regulatory Linkage for Drugs

27. The policy purpose of the *PM(NOC) Regulations* is set out in Health Canada's Guidance Document and includes: "The PM(NOC) Regulations provide the balance, through a patent enforcement mechanism, to ensure that the early working exception is not abused by linking the regulatory approval of a generic drug to the patent status of the innovative product." (https://www.canada.ca/content/dam/hc-sc/documents/services/drug-health-product-review-approval/drug-products/guidance-documents/pm-noc-regulations-guid-ld-eng.pdf, p. 7).

28. Section C.08.002(1)(b) of the *Food and Drug Regulations* addresses regulatory approval of a drug and provides that no person "shall sell or advertise a new drug" unless the Minister has

issued an NOC pursuant to subsections C.08.004 or C.08.004.01. If a patent is listed on the Patent Register in respect of a drug product, the *PM(NOC) Regulations* prohibit the Minister from issuing an NOC for a generic drug unless certain circumstances are met. Those circumstances include the timing and product specificity requirements set out in sections 3 and 4 of the *PM(NOC) Regulations*.

29. The Regulatory Impact Analysis Statements published following various amendments to the *PM(NOC) Regulations* also outline their policy purpose, including:

(a) "… the PM(NOC) Regulations are intended to provide effective patent protection by ensuring that a notice of compliance is not issued to the generic manufacturer until expiry of all relevant patents or such earlier time as the court or innovator is satisfied with the allegation by the generic manufacturer that no valid patent relating to the drug would be infringed. The linkage to relevant patents is assured through the maintenance of a patent register…" (SOR/2015-149, *C. Gaz.* 2015.II; p. 2205)

(b) "By stipulating that the application filing date of the patent precede the date of the corresponding drug submission, the timing requirement promotes a temporal connection between the invention sought to be protected and the product sought to be approved. This ensures that patents for inventions discovered after the existence of a product do not pre-empt generic competition on that product." (SOR/2006-242, *C. Gaz*. 2006.II; p. 1511-2)

G. The Patent Register

30. When a patent is listed on the Patent Register in respect of a drug marketed by a "first person", that first person is entitled to significant protections under the *PM(NOC) Regulations*:

(a) Any subsequent entrant (i.e., second person) seeking approval to market a generic or biosimilar version of the drug against which a patent is listed must either: (i) await the listed patent's expiry; or (ii) allege invalidity and/or non-infringement of the patent by serving a Notice of Allegation ("**NOA**") on the first person; and

(b) Where the first person receives an NOA, it may launch a patent infringement proceeding and avail of an up to 24-month statutory stay that prevents subsequent entrant market authorization while the patent proceeding is determined.

31. Sections 3 and 4 of the *PM(NOC) Regulations* address the Minister's maintenance of the Patent Register, the submission of patent lists filed by a first person, and the eligibility of patents for listing. The Applicant files drug submissions for STELARA in Canada and is a first person for the purposes of the *PM(NOC) Regulations*.

32. Pursuant to subsection 3(2) of the *PM(NOC) Regulations*, the Minister is required to maintain a register of patents submitted for addition to the Patent Register:

> 3(2) The Minister shall maintain a register of patents that have been submitted for addition to the register and certificates of supplementary protection in which any of those patents are set out [...]

33. Pursuant to subsections 3(2) to 3(8) of the *PM(NOC) Regulations*, the Minister has the discretion to maintain the Patent Register, including the ability to add or delete patents in a broad array of circumstances. Under subsection 3(2) of the *PM(NOC) Regulations,* the Minister is

expressly granted authority to: (i) add any patent on a patent list to the Patent Register; (ii) delete patents from the Patent Register in certain circumstances; and (iii) perform discretionary reviews of the Patent Register.

34. Subsections 4(1) to 4.1 of the *PM(NOC) Regulations* set out certain criteria for listing, including: (i) when patent lists for existing and newly issued patents can be submitted; (ii) the required content of patent lists; (iii) the eligible drug submissions for which patent lists may be filed; and (iv) the eligible patent claims for which patent lists may be filed.

35. First persons add patents to the Patent Register by submitting a patent list to OSIP. A patent list must identify: (i) a drug submission; (ii) a drug; (iii) a patent; (iv) the first person's right to list the patent; and (v) the address in Canada for service on the first person of any NOA by a second person alleging the patent is improperly listed, invalid, or not infringed.

36. Following service of an NOA, the first person and/or patent owner may, within 45 days, bring a court action pursuant to section 6 of the *PM(NOC) Regulations* against the second person seeking a declaration that making, constructing, using, or selling a drug in accordance with the second person's drug submission would infringe a listed patent.

37. When a first person commences a patent infringement proceeding in respect of a listed patent, the Minister is prohibited from approving the second person's drug submission during the statutory stay period which is triggered by the commencement of the action.

38. The Patent Register is the vehicle by which first persons and patentees access important rights under the *PM(NOC) Regulations*. A listed patent entitles the first person to receive early notice of generic entry in the form of an NOA and thereby elect to commence a patent infringement

proceeding prior to generic entry. Further this provides a first person with the benefit of a time limited statutory stay.

39. If no patents are listed on the Patent Register in respect of a drug product, then a first person cannot exercise these rights under the *PM(NOC) Regulations.*

40. The Patent Register is governed by the *PM(NOC) Regulations*, which are promulgated pursuant to the authority granted to the Governor General in Council by the *Patent Act*. They must therefore be consistent with the object and purpose of the *Patent Act*.

H. Requirements for Listing Patents on the Patent Register

41. This Application addresses both the product specificity and timing criteria for listing a newly issued patent on the Patent Register.

42. **Product specificity requirements**: Subsections 4(2), 4(2.1) and 4(3) of the *PM(NOC) Regulations* set out criteria regarding which patents can be added to the Patent Register.

43. Subsection 4(3) addresses eligibility criteria for a patent to be added to the Patent Register in relation to a SNDS:

> (3) A patent on a patent list in relation to a supplement to a new drug submission is eligible to be added to the register if the supplement is for a change in formulation, a change in dosage form or a change in use of the medicinal ingredient, and
>
> (a) in the case of a change in formulation, the patent contains a claim for the changed formulation that has been approved through the issuance of a notice of compliance in respect of the supplement;
>
> (b) in the case of a change in dosage form, the patent contains a claim for the changed dosage form that has been approved through the issuance of a notice of compliance in respect of the supplement; or

> (c) in the case of a change in use of the medicinal ingredient, the patent contains a claim for the changed use of the medicinal ingredient that has been approved through the issuance of a notice of compliance in respect of the supplement.

44. **Timing requirement**: Subsections 4(6) of the *PM(NOC) Regulations* set out criteria regarding when a newly issued patent can be added to the Patent Register after the filing of an NDS or an SNDS:

> 4(6) A first person may, after the date of filing of a new drug submission or a supplement to a new drug submission, and within 30 days after the issuance of a patent that was issued on the basis of an application that has a filing date in Canada that precedes the date of filing of the submission or supplement, submit a patent list, including the information refenced to in subsection (4), in relation to the submission or supplement.

I. The Decision

45. On July 29, 2022, the Minister communicated a preliminary decision to the Applicant finding the ’837 Patent to be ineligible for listing on the Patent Register in respect of the drug STELARA (the “**Preliminary Decision**”). Although the ’837 Patent had been submitted for listing in respect of SNDS 244670, the Minister suggested that the ’837 Patent claims the new indication approved in a previous submission, SNDS 224739, and therefore raised the possibility that the ’837 Patent might be eligible for listing also as against SNDS 224739.

46. The Preliminary Decision found the ’837 Patent ineligible for listing on the Patent Register against either submission (SNDS 244670 or SNDS 224739) for failing to satisfy section 4 of the *PM(NOC) Regulations*, i.e. the product specificity and timing requirements.

47. On September 14, 2022, the Applicant sought reconsideration of the Preliminary Decision by the Minister (the “**Applicant’s Response**”). The Applicant submitted written representations, which maintained and provided further support for the Applicant’s listing request, (described

below in paragraphs 49 – 51 and 55 - 58) as well as a statement from an expert clinician and relevant literature.

48. By letter dated November 15, 2022, the Minister issued the Decision under review. The Decision rejected the Applicant's arguments and held that the '837 Patent was not eligible for inclusion on the Patent Register in respect of the drug STELARA.

(i) SNDS 244670

(i) The Applicant's Response

49. The Applicant asserted, *inter alia*, that the Minister's Decision failed to properly apply the listing requirements under section 4 of the *PM(NOC) Regulations.*

50. With respect to the product specificity requirements, the Applicant submitted that:

(a) The '837 Patent meets the product specificity requirements of subsection 4(3)(c) of the *PM(NOC) Regulations* in respect of SNDS 244670 because the '837 Patent claims to long term use of ustekinumab are a "change in use" approved through SNDS 244670, in the form of the additional safety data related to treatment of ulcerative colitis; and

(b) A clinician reviewing the new Product Monograph with this new information would change her prescribing practices, especially a clinician who may have been otherwise hesitant to prescribe STELARA beyond 44 weeks. The Applicant's Response included a clinician's statement supporting this position.

51. With respect to the timing requirements, there is no dispute that the '837 Patent meets the timing requirements of subsection 4(3)(c) of the *PM(NOC) Regulations* in respect of SNDS

244670. The '837 Patent was filed on September 24, 2019, prior to the filing date of SNDS 244670 (on October 1, 2020), and listing was sought within 30 days of patent issuance (the patent issued on July 12, 2022 and listing was sought on July 29, 2022).

(ii) The Decision Under Review

52. The Minister maintained that the '837 Patent was ineligible for listing on the Patent Register in respect of SNDS 244670.

53. With respect to the product specificity requirements, the Minister found, *inter alia*, that:

(a) SNDS 244670 was not approved for a change in use because the inclusion of safety information does not constitute a change in use of the medicinal ingredient for the purpose of subsection 4(3) of the *PM(NOC) Regulations*; and

(b) Even if SNDS 244670 was considered to have been approved for a change in use, the '837 Patent does not claim the "very change" that was approved in SNDS 244670, applying the test set out in Health Canada's Guidance Document.

(ii) SNDS 224739

(i) The Applicant's Response

54. The Applicant asserted, *inter alia*, that the Minister's Decision failed to properly apply the listing requirements under section 4 of the *PM(NOC) Regulations.*

55. With respect to the product specificity requirements, the Applicant submitted that the '837 Patent meets the product specificity requirements of subsection 4(3)(c) of the *PM(NOC) Regulations* in respect of SNDS 224739 because the '837 Patent claims to long term use of

ustekinumab are a "change in use" approved through SNDS 224739, in the form of a new indication for ulcerative colitis.

56. With respect to the timing requirements, the Applicant submitted that:

(a) The '837 Patent meets the timing requirements of subsection 4(6) of the *PM(NOC) Regulations* in respect of SNDS 224739 because the claim date is the rational date to consider under subsection 4(6) and the OPML ought to apply the intent of the *PM(NOC) Regulations* with respect to the timing of the patent and the submission under subsection 4(6) of the *PM(NOC) Regulations*, and determine that eligibility is met because the claim date of the patent precedes the filing date of the submission; and

(b) As a patent list was already submitted with respect to the '837 Patent within the requisite 30 days of its issuance in respect of SNDS 244670, the request to consider listing against SNDS 224739 was not out of time under subsection 4(6) of the *PM(NOC) Regulations*.

57. The Applicant also asserted, in respect of SNDS 224739, that the use of the filing date in subsection 4(6) of the *PM(NOC) Regulations* is *ultra vires* the scheme of the *Patent Act* and of the *PM(NOC) Regulations* themselves.

(ii) The Decision Under Review

58. The Minister maintained that the '837 Patent was ineligible for listing on the Patent Register in respect of SNDS 224739.

59. With respect to the product specificity requirements, the Minister made no explicit findings. The Minister's position appears to be that the product specificity requirements are met for SNDS 224739, based on the statement made in the Preliminary Decision and in the Decision under review.

60. With respect to the timing requirements, the Minister found, *inter alia,* that the '837 Patent is not eligible to be added to the Patent Register against SNDS 224739 because no patent list was filed, and because the filing date is the appropriate date to consider and the filing date for the '837 Patent is later than the filing date for SNDS 224739.

61. With respect to the Applicant's *ultra vires* argument, the Minister also found, *inter alia*, that the *PM(NOC) Regulations* cannot be considered in isolation from the *Patent Act*, and that the Governor in Council could have chosen for subsection 4(6) to refer to the "claim date" had it wished to do so.

J. The Decision is Unreasonable

62. The Minister's Decision that the '837 Patent is not eligible for listing against SNDS 244670 or SNDS 224739 is unreasonable.

63. Having regard to the facts and the law, the Minister made the Decision unreasonably in particular by:

(a) Misinterpreting the text, context, and purpose of the *PM(NOC) Regulations*, including sections 3 and 4 and misapplying these sections to arrive at a Decision that is unreasonable;

(b) Rejecting the amendment of the Applicant's original patent list to include SNDS 224739; requiring a separate patent list seeking listing of the '837 Patent against SNDS 224739; and requiring the filing of a Form IV rather than accepting the information required by subsection 4(4) of the *PM(NOC) Regulations,* which was provided in accordance therewith in the Applicant's letter dated September 14, 2022;

(c) Misinterpreting the scheme and purpose of Canadian patent law, including the *Patent Act*, the *PM(NOC) Regulations*, and the legislative intent of Parliament in enacting and amending the *PM(NOC) Regulations*;

(d) Refusing to list the '837 Patent on the Patent Register in respect of the drug STELARA;

(e) Fettering her discretion, including by applying Health Canada's Guidance Document on the *PM(NOC) Regulations* instead of the *PM(NOC) Regulations* and *Patent Act*;

(f) Failing to consider the prejudicial impact caused by the Decision on the Applicant; and

(g) Otherwise failing to interpret and apply the facts and law in an appropriate manner, including by refusing to exercise her discretion to find the '837 Patent eligible for listing on the Patent Register.

64. The '837 Patent was eligible for listing on the Patent Register against SNDS 244670 and SNDS 224739 as of the date that the patent was originally submitted for listing (July 29, 2022).

In the alternative, the ’837 Patent was eligible for listing as of the date the Applicant submitted its letter of representations (September 14, 2022). In the further alternative, the ’837 Patent is eligible for listing as of the date of the decision of this Court on this Application declaring the ’837 Patent eligible for listing.

K. Subsection 4(6) of the *PM(NOC) Regulations* is *Ultra Vires* the *Patent Act*

65. If the Court determines that the ’837 Patent is not listable against SNDS 244670, then in addition and/or in the alternative, subsection 4(6) is *ultra vires* because it refers to the filing date, and the 837 Patent is listable against SNDS 224739.

66. Section 4(6) of the *PM(NOC) Regulations* is inconsistent with the purpose and objects of the *Patent Act*, including s. 55.2 of the *Act*, to the extent that it connects the right to submit a patent list to the filing date of a patent as opposed to its claim date.

67. The designation of the “filing date” in section 4(6) bears no rational connection with the object of the *Patent Act.* The appropriate date is the claim date of the claims of a patent, as defined in sections 2 and 28.1 of the *Act*. The claim date is often, but not necessarily, the filing date; where a claim of priority has been made, it also includes the priority date (section 28.1 of the *Act*).

68. As one purpose of the *PM(NOC) Regulations* is to provide “effective patent protection” and as subsection 4(6) of the *PM(NOC) Regulations* seeks a “temporal connection between the invention … and the product”, the Canadian filing date in subsection 4(6) cannot be supported on any reasonable interpretation of the regulation-making power in the statute.

69. In the alternative, the Canadian filing date in subsection 4(6) is an illogical, irrational, and/or arbitrary date to employ in subsection 4(6) of the *PM(NOC) Regulations.*

70. The date that achieves the object and purpose of both the *Patent Act* and the *PM(NOC) Regulations* is the claim date. It underscores the temporal connection between the invention and the product.

71. Indeed, the temporal requirement that a patent be filed prior to the filing of the relevant submission undermines the purpose of the *Patent Act* by failing to recognize rights granted to patentees in the *Patent Act*. The *Patent Act* protects inventions through a "first to file" system in which claim dates serve as the relevant date for ascertaining the inventor's claim to priority to the invention. As such, the claim date is relevant to*, inter alia,* novelty and inventiveness (pursuant to sections 28.2 and 28.3 of the *Patent Act*) and to the prior use defence (pursuant to section 56 of the *Patent Act*).

72. By virtue of s. 4(6) of the *PM(NOC) Regulations*, first persons are prevented from benefitting from priority claims and are prevented from listing patents with claim dates before the filing of a regulatory submission but that are filed in Canada after the filing of the regulatory submission.

73. The use of filing date in the *PM(NOC) Regulations* is illogical, arbitrary, and *ultra vires* the scheme of the *Act* and of the *PM(NOC) Regulations* themselves.

L. Statutory Provisions

74. The Applicant relies on:

(a) *Patent Act*, R.S.C., 1985, c. P-4, including section 55.2;

(b) *Patented Medicines (Notice of Compliance) Regulations*, SOR/93-133 as amended, including sections 3 and 4;

(c) *Federal Courts Act*, R.S.C., 1985, c. F-7 as amended, including sections 18 and 18.1;

(d) *Federal Courts Rules*, SOR/98-106 as amended;

(e) *Interpretation Act, RSC 1985, c I-21*, as amended, including s. 12; and

(f) Such further and other grounds as counsel may advise and this Honourable Court may permit.

THIS APPLICATION WILL BE SUPPORTED BY THE FOLLOWING MATERIAL:

(a) A certified copy of the ’837 Patent;

(b) Affidavit(s) to be sworn;

(c) The record before and the Decision of the Minister dated November 15, 2022; and

(d) Such further and other material as counsel may advise and this Honourable Court permit.

THE APPLICANT REQUESTS THE MINISTER OF HEALTH TO SEND A CERTIFIED COPY OF THE FOLLOWING MATERIAL THAT IS NOT IN THE POSSESSION OF THE APPLICANT BUT IS IN THE POSSESSION OF THE MINISTER OF HEALTH TO THE APPLICANT AND TO THE REGISTRY:

1. All materials considered or created by the Minister of Health, or by any person or entity acting on behalf of the Minister of Health, and including all documentation and communication, pertaining or relevant to the Decision herein.

REASONS FOR JUDGMENT OF THE COURT
(Delivered from the Bench at Ottawa, Ontario, on November 21, 2023).

LOCKE J.A.

[1] Janssen Inc. (Janssen) obtained notices of compliance in respect of supplemental new drug submissions (SNDSs) numbered 224739 and 244670 on January 23, 2020 and September 9, 2021, respectively. Canadian Patent No. 3,113,837 (the 837 Patent) issued on July 12, 2022, and on July 25, 2022, Janssen submitted a patent list (pursuant to the *Patented Medicines (Notice of Compliance) Regulations*, S.O.R./93-133 (the *Regulations*)) in respect of SNDS 244670

identifying the 837 Patent. SNDS 224739 was not mentioned in this July 25, 2022 submission. It was only on September 14, 2022 that Janssen sought to include SNDS 224739 in the patent list.

[2] Health Canada's Office of Submissions and Intellectual Property (OSIP), on behalf of the Minister of Health, refused to accept the patent list in respect of SNDS 224739 citing several reasons. Janssen sought judicial review of OSIP's decision before the Federal Court, but this was dismissed (2023 FC 870, *per* Justice Mandy Aylen). For the purposes of the present appeal, it is sufficient to address only one of the reasons cited by OSIP: that the patent list submitted on July 25, 2022 did not relate to SNDS 224739, and the submission on September 14, 2022 that did mention SNDS 224739 was outside the 30-day period from the date of issuance of the 837 Patent, as contemplated in subsection 4(6) of the *Regulations*. Because of our conclusion on this issue, it is not necessary to address other questions raised in this appeal, such as (i) whether the September 14, 2022 submission satisfied the other requirements for a patent list, and (ii) whether part of subsection 4(6) of the *Regulations* (unrelated to the 30-day period referred to above) is *ultra vires*.

[3] The parties agree on the standard of review, and we concur. As discussed in *Agraira v. Canada (Public Safety and Emergency Preparedness)*, 2013 SCC 36, [2013] 2 S.C.R. 559 at para. 45, the question for this Court to decide is whether the Federal Court identified the appropriate standard of review and applied it correctly. We are to step into the shoes of the Federal Court and focus on OSIP's decision. The parties also agree, as do we, that the Federal Court identified the appropriate standard of review: reasonableness. The issue therefore is whether the Federal Court correctly applied the reasonableness standard of review.

[4] In respect of the one issue that we must address in this appeal, OSIP noted that subsection 4(4) of the *Regulations* enumerates requirements for a patent list, including paragraph 4(4)(a) concerning identification of the SNDS (or new drug submission) to which the list relates. OSIP noted correctly that the patent list submitted on July 25, 2022 did not identify SNDS 224739, and hence this requirement was not met. OSIP rejected Janssen's arguments that (i) the later September 14, 2022 submission could change the nature of the July 25, 2022 patent list, and (ii) OSIP's preliminary response to the July 25, 2022 patent list acknowledged that it also concerned SNDS 224739. OSIP also noted that the 30-day deadline contemplated in subsection 4(6) of the *Regulations* expired on August 11, 2022. Therefore, the September 14, 2022 submission was too late, even assuming (contrary to OSIP's view) that it met the requirements for a patent list.

[5] We are not convinced that there was anything unreasonable in OSIP's analysis in this regard. We also do not agree with Janssen's argument that subsection 4(7) of the *Regulations* should be read to permit it to update the patent list by adding reference to an additional SNDS. Subsection 4(7) provides that a first person "must keep the information on the list up to date"; this subsection does not permit adding a patent to the list. We see nothing in the patent list in this case that would have engaged this provision. The information on the patent list was up to date. Janssen cannot, under the guide of keeping the information on the patent list up to date, add a different SNDS to an existing patent list.

[6] It follows from the foregoing that we find no reviewable error in the Federal Court's conclusion that OSIP's refusal to add the patent list against SNDS 224739 was reasonable.

[7] We will dismiss this appeal with costs.

APPLICATION UNDER sections 18 and 18.1 of the *Federal Courts Act*, R.S.C. 1985, c. F-7, as amended.

NOTICE OF APPLICATION

TO THE RESPONDENTS:

A PROCEEDING HAS BEEN COMMENCED AGAINST YOU by the Applicant. The relief claimed by the Applicant appears below.

THIS APPLICATION will be heard by the Court at a time and place to be fixed by the Judicial Administrator. Unless the Court orders otherwise, the place of hearing will be as requested by the Applicant. The Applicant requests that this application be heard at Toronto, Ontario.

IF YOU WISH TO OPPOSE THIS APPLICATION, to receive notice of any step in the application or to be served with any documents in the application, you or a solicitor acting for you must file a notice of appearance in Form 305 prescribed by the *Federal Courts Rules* and serve it on the Applicant's solicitor or, if the Applicant is self-represented, on the Applicant, WITHIN 10 DAYS after being served with this notice of application.

Copies of the *Federal Courts Rules*, information concerning the local offices of the Court and other necessary information may be obtained on request to the Administrator of this Court at Ottawa (telephone 613-992-4238) or at any local office.

IF YOU FAIL TO OPPOSE THIS APPLICATION, JUDGMENT MAY BE GIVEN IN YOUR ABSENCE AND WITHOUT FURTHER NOTICE TO YOU.

APPLICATION

This is an Application for judicial review pursuant to sections 18 and 18.1 of the *Federal Courts Act*, R.S.C. 1985, c. F-7, as amended, in respect of a decision of the Office of Submissions and Intellectual Property ("**OSIP**"), on behalf of the Minister of Health (the "**Minister**"). By letter dated March 29, 2023, the Minister advised the Applicant that its patent list for new drug submission 267289 ("**NDS 267289**") for Canadian Patent No. 3,113,837 (the "'**837 Patent**") and the drug FINLIUS (including FINLIUS I.V.) ("**FINLIUS**") is not eligible for listing on the Patent Register because NDS 267289 is not the type of submission that can support the addition of a patent to the Patent Register pursuant to the *Patented Medicines (Notice of Compliance) Regulations*, SOR/93-133, as amended (the "***PM(NOC) Regulations***") (the "**Decision**").

THE APPLICANT MAKES APPLICATION FOR:

1. The Applicant seeks relief as follows:

   (a) An order quashing or setting aside the Minister's Decision refusing to list the '837 Patent on the Patent Register in respect of NDS 267289 FINLIUS;

   (b) A declaration that the '837 Patent is eligible for listing on the Patent Register in respect of FINLIUS as of:

      (i) The date on which the Notice of Compliance issues in respect of NDS 267289, which is the date on which FINLIUS can be

deemed eligible for listing, or the closest date thereto upon which it is eligible for listing;

(ii) In the alternative, the earliest date on which the patent list for FINLIUS can be deemed to meet the requirements for listing; or

(iii) In the further alternative, the date of the decision of this Court on this Application.

(c) A declaration pursuant to subsection 4.1(2) of the *PM(NOC) Regulations* that the patent list be carried forward and the '837 Patent be listed on the Patent Register in respect of any supplementary new drug submissions ("**SNDS**") filed for FINLIUS;

(d) An order directing the Minister to list the '837 Patent on the Patent Register in respect of FINLIUS, as of the date determined in (b);

(e) In the alternative to (b), (c) and (d), an order referring the matter back to the Minister for redetermination on proper principles as to whether the '837 Patent is eligible for listing on the Patent Register in respect of STELARA;

(f) In the further alternative to (b), (c), (d), and (e), a declaration that the '837 Patent be carried forward and the '837 Patent be listed on the Patent Register for FINLIUS in accordance with subsection 4.1(2) of the *PM(NOC) Regulations*, if the '837 Patent is added to the Patent Register in respect of STELARA (I.V.);

(g) Costs of this Application; and

(h) Such further and other relief as counsel may advise and this Honourable Court may permit.

THE GROUNDS FOR THE APPLICATION ARE:

A. Overview

2. This Application addresses whether a new drug submission is a "new drug submission" within the meaning of subsections 3(1) and 4(2) of the *PM(NOC) Regulations*. The Minister's decision that the '837 Patent is ineligible for listing on the Patent Register in respect of FINLIUS was unreasonable.

3. The '837 Patent is listable in respect of NDS 267289. NDS 267289 seeks approval of FINLIUS, which is identical to the approved drug STELARA I.V. ("STELARA") but is a distinct product and will have its own Drug Identification Number(s) ("DIN") from STELARA. NDS 267289 cross-references the regulatory dossier of STELARA and includes the required health and safety data for approval. FINLIUS will have different drug identification numbers than STELARA pursuant to the *Food and Drug Regulations*, CRC, c 870. NDS 267289 is a "new drug submission" within the meaning of subsections 3(1) and 4(2) of the *PM(NOC) Regulations* and therefore allows for the listing of the '837 Patent on the Patent Register.

4. NDS 267289 is a "new drug submission" within the meaning of subsections 3(1) and 4(2) of the *PM(NOC) Regulations* and therefore allows for the listing of the '837 Patent on the Patent Register. Accordingly, the '837 Patent is eligible for listing on the Patent Register in respect of FINLIUS.

5. The Minister erred in determining that NDS 267289 was not a submission that can support the addition of a new patent to the Patent Register within the meaning of subsections 3(1) and 4(2) of the *PM(NOC) Regulations*.

B. FINLIUS and NDS 267289

6. FINLIUS is a Schedule D biologic drug containing the medicinal ingredient ustekinumab.

7. NDS 267289 seeks approval of FINLIUS to treat *inter alia* moderately to severely active ulcerative colitis in adult subjects.

8. FINLIUS will contain the same medicinal ingredient and have the same manufacturer as STELARA. NDS 267289 seeks approval of FINLIUS and cross-references the regulatory dossier of STELARA. STELARA was first approved in Canada in December 2008 for the treatment of psoriasis. Since that time, STELARA has gained approvals for several other important indications including moderately to severely active ulcerative colitis.

9. NDS 267289 was filed through an administrative pathway created by Health Canada for submissions that do not require direct inclusion of new health and safety data. This pathway is described in *Guidance Document: Administrative Processing of Submissions and Applications Involving Human or Disinfectant Drugs* (the "*Guidance*").

10. The '837 Patent is sought to be listed in respect of NDS 267289. There are currently no patents listed on the Patent Register for FINLIUS pursuant to the *PM(NOC) Regulations*.

C. The '837 Patent

11. The '837 Patent is entitled "Safe and effective method of treating ulcerative colitis with anti-IL12/IL23 antibody". The '837 Patent application was filed on September 24, 2019 and issued on July 12, 2022. It will expire on September 24, 2039.

12. The '837 Patent is generally directed to the use of an anti-IL-12/IL-23p40 antibody, including ustekinumab, for the treatment of moderately to severely active ulcerative colitis in a subject in need thereof, where the subject failed to respond to or was intolerant of at least one enumerated therapy or the subject demonstrated corticosteroid dependence and compositions for use in such treatment.

D. The Governing Statute: The *Patent Act*

13. The object and purpose of the *Patent Act* is to promote innovation by granting patentees a time limited monopoly. The monopoly granted pursuant to the *Patent Act* provides a patentee with the exclusive right and liberty to make, use and sell the invention during the term of the patent in exchange for disclosure of new and useful innovations. Patents are granted for new, useful, and inventive subject matter, including incremental inventions. Once issued, patents are presumed to be valid.

14. The ability of patentees to benefit from their inventions is critical to the patent bargain and central to the *Patent Act*. It must therefore be maintained in any subordinate legislation like the *PM(NOC) Regulations*.

E. The Patent Register

15. When a patent is listed on the Patent Register in respect of a drug marketed by a "first person", that first person is entitled to significant protections under the *PM(NOC) Regulations*:

(a) Any subsequent entrant (i.e., second person) seeking approval to market a generic or biosimilar version of the drug against which a patent is listed must either: (i) await the listed patent's expiry; or (ii) allege invalidity and/or non-infringement of the patent by serving a Notice of Allegation ("**NOA**") on the first person; and

(b) Where the first person receives an NOA, it may launch a patent infringement proceeding and avail of an up to 24-month statutory stay that prevents subsequent entrant market authorization while the patent proceeding is determined.

16. Sections 3 and 4 of the *PM(NOC) Regulations* address the Minister's maintenance of the Patent Register, the submission of patent lists filed by a first person, and the eligibility of patents for listing. The Applicant files drug submissions for FINLIUS in Canada and is a first person for the purposes of the *PM(NOC) Regulations*.

17. Pursuant to subsection 3(2) of the *PM(NOC) Regulations*, the Minister is required to maintain a register of patents submitted for addition to the Patent Register:

> 3(2) The Minister shall maintain a register of patents that have been submitted for addition to the register and certificates of supplementary protection in which any of those patents are set out [...]

18. Pursuant to subsections 3(2) to 3(8) of the *PM(NOC) Regulations*, the Minister maintains the Patent Register, including by adding or deleting patents in a broad array of circumstances. Under subsection 3(2) of the *PM(NOC) Regulations,* the Minister is expressly granted authority to: (i) add any patent on a patent list to the Patent Register; (ii) delete patents from the Patent Register in certain circumstances; and (iii) perform discretionary reviews of the Patent Register.

19. Subsection 3(1) of the *PM(NOC) Regulations* sets out the definition of "new drug submission": "new drug submission means a new drug submission or an extraordinary use new drug submission as those terms are used in Division 8 of Part C of the *Food and Drug Regulations* but excludes such a submission that is based solely on the change of name of the manufacturer."

20. Subsection C.008.002 of the *Food and Drug Regulations* states:

> C.08.002 (1) No person shall sell or advertise a new drug unless (a) the manufacturer of the new drug has filed with the Minister a new drug submission, an extraordinary use new drug submission, an abbreviated new drug submission or an abbreviated extraordinary use new drug submission relating to the new drug that is satisfactory to the Minister; [...]
>
> (2) A new drug submission shall contain sufficient information and material to enable the Minister to assess the safety and effectiveness of the new drug, including the following [list of information required for NDS].

21. Subsections 4(1) to 4.1 of the *PM(NOC) Regulations* set out certain criteria for listing, including: (i) when patent lists for existing and newly issued patents can be submitted; (ii) the required content of patent lists; (iii) the eligible drug submissions

for which patent lists may be filed; and (iv) the eligible patent claims for which patent lists may be filed.

22. Subsection 4(2) states:

> (2) A patent on a patent list in relation to a new drug submission is eligible to be added to the register if the patent contains
>
> (a) a claim for the medicinal ingredient and the medicinal ingredient has been approved through the issuance of a notice of compliance in respect of the submission;
>
> (b) a claim for the formulation that contains the medicinal ingredient and the formulation has been approved through the issuance of a notice of compliance in respect of the submission;
>
> (c) a claim for the dosage form and the dosage form has been approved through the issuance of a notice of compliance in respect of the submission; or
>
> (d) a claim for the use of the medicinal ingredient, and the use has been approved through the issuance of a notice of compliance in respect of the submission.

23. First persons add patents to the Patent Register by submitting a patent list to OSIP. A patent list must identify: (i) a drug submission; (ii) a drug; (iii) a patent; (iv) the first person's right to list the patent; and (v) the address in Canada for service on the first person of any NOA by a second person alleging the patent is improperly listed, invalid, or not infringed.

24. Following service of an NOA, the first person and/or patent owner may, within 45 days, bring a court action pursuant to section 6 of the *PM(NOC) Regulations* against the second person seeking a declaration that making, constructing, using, or selling a

drug in accordance with the second person's drug submission would infringe a listed patent.

25. When a first person commences a patent infringement proceeding in respect of a listed patent, the Minister is prohibited from approving the second person's drug submission during the statutory stay period which is triggered by the commencement of the action.

26. The Patent Register is the vehicle by which first persons and patentees access important rights under the *PM(NOC) Regulations*. A listed patent entitles the first person to receive early notice of generic entry in the form of an NOA and thereby elect to commence a patent infringement proceeding prior to generic entry. Further, listing a patent provides a first person with the benefit of a time limited statutory stay.

27. If no patents are listed on the Patent Register in respect of a drug product, then a first person cannot exercise these rights under the *PM(NOC) Regulations*.

F. Requirements for Listing Patents on the Patent Register

28. This Application addresses whether a new drug submission is a "new drug submission" within the meaning of subsections 3(1) and 4(2) of the *PM(NOC) Regulations*.

G. The Decision

29. On December 21, 2022, the Minister communicated a preliminary decision to the Applicant finding the '837 Patent to be ineligible for listing on the Patent Register in respect of the drug FINLIUS (the "**Preliminary Decision**"). The Minister advised

that it was of the preliminary view that the '837 Patent was ineligible for listing on the Patent Register against NDS 267289 because NDS 267289 is not a type of submission that can support the listing of a patent on the Patent Register within the meaning of subsections 3(1) and 4(2) of the *PM(NOC) Regulations*.

30. On January 18, 2023, the Applicant sought reconsideration of the Preliminary Decision by the Minister (the "**Applicant's Response**"). The Applicant submitted written representations, which maintained and provided further support for the Applicant's listing request.

31. By letter dated March 29, 2023, the Minister issued the Decision under review. The Decision rejected the Applicant's arguments and held that the '837 Patent was not eligible for inclusion on the Patent Register in respect of the drug FINLIUS.

H. The Applicant's Response

32. The Applicant asserted that the Minister's Preliminary Decision failed to properly interpret the definition of submission in subsection 3(1) of the *PM(NOC) Regulations* and failed to properly apply the listing requirements under subsection 4(2).

33. The Applicant submitted that:

(a) NDS 267289 satisfied the health and safety data requirements of the *Food and Drug Regulations* by cross-reference to approved STELARA health and safety data;

(b) NDS 267289 meets the definition of a new drug submission within the meaning of the *PM(NOC) Regulations* and the *Food and Drug Regulations*;

(c) It is not in dispute that the '837 Patent meets the requirements in subsections 4(3) and 4(6) (i.e., the product specificity and timing requirements) in the *PM(NOC) Regulations* in respect of NDS 267289; and

(d) The '837 Patent does not need to be "carried forward" to FINLIUS from a listing of the '837 Patent against STELARA under subsection 4.1(2) of the *PM(NOC) Regulations* to be listed.

I. The Decision Under Review

34. The Minister maintained that the '837 Patent was ineligible for listing on the Patent Register in respect of NDS 267289.

35. The Minister concluded that for the purpose of adding a new patent to the Patent Register, new drug submissions submitted under the administrative pathway in the *Guidance* are excluded from the definition of "new drug submission" in subsection 3(1) of the *PM(NOC) Regulations*.

J. The Decision is Unreasonable

36. The Minister's Decision that the '837 Patent is not eligible for listing against NDS 267289 is unreasonable.

37. Having regard to the facts and the law, the Minister made the Decision unreasonably by:

(a) Unreasonably interpreting the meaning of a "new drug submission" in the *PM(NOC) Regulations* including by:

(i) Disregarding the clear wording of the *PM(NOC) Regulations* and *Food and Drug Regulations*;

(ii) Failing to give effect to differences in the definitions of "new drug submission" and "supplement to a new drug submission" in the *PM(NOC) Regulations*;

(iii) Failing to properly consider the context and purpose of the *PM(NOC) Regulations*;

(iv) Failing to consider amendments to the *PM(NOC) Regulations*;

(v) Misapplying case law;

(vi) Adding to the plain meaning of the words "new drug submission" a policy gloss that has no support in the language of the *PM(NOC) Regulations* and is unnecessary to give effect to the text as it is worded;

(vii) Otherwise arriving at an unreasonable interpretation of the meaning of "new drug submission" in the *PM(NOC) Regulations*;

(b) Misapplying the *PM(NOC) Regulations* and the *Food and Drug Regulations* by, *inter alia*, failing to apply the proper meaning of "new drug submission" to the facts to arrive at an unreasonable Decision;

(c) Treating the interpretation of "new drug submission" to be a matter of discretion to be informed by the Minister's policy views;

(d) Refusing to list the '837 Patent on the Patent Register in respect of the drug FINLIUS;

(e) Fettering her discretion by taking the position that no new drug submissions submitted under the administrative pathway created by Health Canada and described in the *Guidance* can be submissions that can support listing of a patent on the Patent Register;

(f) Failing to consider the prejudicial impact caused by the Decision on the Applicant; and

(g) Otherwise failing to interpret and apply the facts and law in a reasonable manner, including by refusing to exercise her discretion to find the '837 Patent eligible for listing on the Patent Register.

38. In the alternative, if the Court finds that the '837 Patent cannot be listed in respect of NDS 267289, then the Minister's Decision is internally inconsistent and unreasonable for failing to determine that the '837 Patent will be eligible to be carried forward within the meaning of subsection 4.1(2) of the *PM(NOC) Regulations* and listed against FINLIUS if it is listed against STELARA. The '837 Patent is currently

the subject of another judicial review in Federal Court File No. T-2627-22, challenging the Minister's decision not to list it against STELARA.

39. The '837 Patent is eligible for listing on the Patent Register in respect of NDS 267289 as of the date that it is approved through issuance of a notice of compliance. In the alternative, the '837 Patent is eligible for listing as of such earliest date that NDS 26789 is eligible for listing. In the further alternative, the '837 Patent is eligible for listing as of the date of the decision of this Court on this Application declaring the '837 Patent eligible for listing.

K. Statutory Provisions

40. The Applicant relies on:

(a) *Patent Act*, R.S.C., 1985, c. P-4;

(b) *Patented Medicines (Notice of Compliance) Regulations*, SOR/93-133 as amended, including sections 3 and 4;

(c) *Food and Drug Regulations*, CRC, c 870;

(d) *Federal Courts Act*, R.S.C., 1985, c. F-7 as amended, including sections 18 and 18.1;

(e) *Federal Courts Rules*, SOR/98-106 as amended;

(f) *Interpretation Act, RSC 1985, c I-21*, as amended, including s. 12; and

(g) Such further and other grounds as counsel may advise and this Honourable Court may permit.

THIS APPLICATION WILL BE SUPPORTED BY THE FOLLOWING MATERIAL:

(a) A certified copy of the '837 Patent;

(b) Affidavit(s) to be sworn;

(c) The record before and the Decision of the Minister dated March 29, 2023; and

(d) Such further and other material as counsel may advise and this Honourable Court permit.

THE APPLICANT REQUESTS THE MINISTER OF HEALTH TO SEND A CERTIFIED COPY OF THE FOLLOWING MATERIAL THAT IS NOT IN THE POSSESSION OF THE APPLICANT BUT IS IN THE POSSESSION OF THE MINISTER OF HEALTH TO THE APPLICANT AND TO THE REGISTRY:

41. All materials considered or created by the Minister of Health, or by any person or entity acting on behalf of the Minister of Health, and including all documentation and communication, pertaining or relevant to the Decision herein.

TABLE OF CONTENTS

Sections or subsections that are not applicable at the time of authorization are not listed.

PART I: HEALTH PROFESSIONAL INFORMATION

Ustekinumab administered subcutaneously will be referred to throughout the Product Monograph as Finlius.
Ustekinumab administered through intravenous infusion will be referred to throughout the Product Monograph as Finlius I.V.

1 INDICATIONS

FINLIUS®/FINLIUS® I.V. (ustekinumab) should be used only by physicians who have sufficient knowledge of plaque psoriasis, psoriatic arthritis, Crohn's disease, and/or ulcerative colitis and who have fully familiarized themselves with the efficacy/safety profile of the drug.

Plaque Psoriasis

Finlius (ustekinumab) is indicated for:

- the treatment of chronic moderate to severe plaque psoriasis in adult patients who are candidates for phototherapy or systemic therapy
- the treatment of chronic moderate to severe plaque psoriasis in pediatric patients (6-17 years of age) who are inadequately controlled by, or are intolerant to, other systemic therapies or phototherapies (see 1.1 Pediatrics).

Psoriatic Arthritis

Finlius (ustekinumab) is indicated for the treatment of adult patients with active psoriatic arthritis. Finlius can be used alone or in combination with methotrexate (MTX).

Crohn's Disease

Finlius/Finlius I.V. (ustekinumab) is indicated for the treatment of adult patients with moderately to severely active Crohn's disease, who have had an inadequate response, loss of response to, or were intolerant to either immunomodulators or one or more tumour necrosis factor-alpha (TNFα) antagonists, or have had an inadequate response, intolerance or demonstrated dependence on corticosteroids.

Ulcerative Colitis

Finlius/Finlius I.V. (ustekinumab) is indicated for the treatment of adult patients with moderately to severely active ulcerative colitis who have had an inadequate response with, lost response to, or were intolerant to either conventional therapy or a biologic or have medical contraindications to such therapies.

1.1 Pediatrics

Pediatrics (6-17 years of age): Finlius (ustekinumab) is indicated for the treatment of chronic moderate to severe plaque psoriasis in pediatric patients (children and adolescents) from 6 to 17 years of age, who are inadequately controlled by, or are intolerant to, other systemic therapies or phototherapies.

The safety and efficacy of Finlius has not been established in pediatric patients with plaque psoriasis <6 years of age. Pediatric studies of Finlius I.V. have not been conducted. The safety and efficacy of Finlius in pediatric patients with psoriatic arthritis, Crohn's disease, and ulcerative colitis have not been established (see 7.1.3 Pediatrics and 14.1 Clinical Trials by Indication, **Pediatric Plaque Psoriasis (6 to 17 years of age)**).

1.2 Geriatrics

Geriatrics (>65 years of age): No major age-related differences in clearance or volume of distribution were observed in clinical studies. Although no overall differences in safety and efficacy were observed between older and younger patients in clinical studies in approved indications, the number of patients aged 65 and over is not sufficient to determine whether they respond differently from younger patients (see 7.1.4 Geriatrics).

2 CONTRAINDICATIONS

- Finlius/Finlius I.V. is contraindicated in patients who are hypersensitive to ustekinumab or to any ingredient in the formulation, including any non-medicinal ingredient, or component of the container (see 7 WARNINGS AND PRECAUTIONS, **Sensitivity/Resistance, Hypersensitivity Reactions** and 6 DOSAGE FORMS, STRENGTHS, COMPOSITION AND PACKAGING).
- Finlius/Finlius I.V. is contraindicated in patients with severe infections such as sepsis, tuberculosis and opportunistic infections (see 7 WARNINGS AND PRECAUTIONS, **General, Infections**).

4 DOSAGE AND ADMINISTRATION

4.1 Dosing Considerations

Finlius/Finlius I.V. (ustekinumab) is intended for use under the guidance and supervision of a physician.

The BioAdvance® Network has been established to facilitate the administration of Finlius/Finlius I.V. BioAdvance® clinics are staffed by qualified healthcare professionals specially trained in the administration of Finlius/Finlius I.V. and care of patients with Crohn's disease and ulcerative colitis. BioAdvance® clinics are available across Canada. Information about the BioAdvance® Network and location of the nearest BioAdvance® Network clinic can be obtained by calling Janssen Inc. Medical Information at: 1-800-567-3331.

4.2 Recommended Dose and Dosage Adjustment

Plaque Psoriasis

For the treatment of plaque psoriasis, Finlius is administered by subcutaneous injection.

Adults

The recommended dose of Finlius is 45 mg administered at Weeks 0 and 4, then every 12 weeks thereafter. Alternatively, 90 mg may be used in patients with a body weight greater than 100 kg. In patients weighing >100 kg, both 45 mg and 90 mg were shown to be efficacious. However, 90 mg was efficacious in a higher percentage of these patients than the 45 mg dose.

For patients who inadequately respond to dosing every 12 weeks, consideration may be given to treating as often as every 8 weeks.

Consideration should be given to discontinuing treatment in patients who have shown no response up to 12 weeks of treatment.

Re-treatment with a dosing regimen of Weeks 0 and 4 followed by 12-week dosing after interruption of therapy has been shown to be safe and effective (see 14.1 Clinical Trials by Indication, **Plaque Psoriasis – Adults, Efficacy of retreatment**).

Pediatrics (6 to 17 years of age)

The recommended dose of Finlius based on body weight is shown below (Table 1). Finlius should be administered at Weeks 0 and 4, then every 12 weeks thereafter.

Consideration should be given to discontinuing treatment in patients who have shown no response up to 12 weeks of treatment.

Table 1: Recommended dose of Finlius for pediatric psoriasis

Weight	Recommended Dose	Dosage Form
< 60 kg [a]	0.75 mg/kg*	vial
≥ 60 to ≤ 100 kg	45 mg	prefilled syringe, vial
> 100 kg [b]	90 mg	prefilled syringe

* To calculate the volume of injection (mL) for patients < 60 kg, use the following formula: *body weight* (kg) x *0.0083* (mL/kg). The calculated volume should be rounded to the nearest 0.01 mL and administered using a 1 mL graduated syringe. A 45 mg vial is available for pediatric patients who need to receive less than the full 45 mg dose.

[a] For patients with body weight < 60 kg, use the vial presentation only

[b] There were only 3 patients aged 12 to 17 years, with a body weight > 100 kg in the study

Table 2: Injection volumes of Finlius for pediatric psoriasis patients < 60 kg

Body weight at time of dosing (kg)	Dose (mg)	Volume of injection (mL)
15	11.3	0.12
16	12.0	0.13
17	12.8	0.14
18	13.5	0.15

54	40.5	0.45
55	41.3	0.46
56	42.0	0.46
57	42.8	0.47
58	43.5	0.48
59	44.3	0.49

Psoriatic Arthritis – Adults

For the treatment of psoriatic arthritis, Finlius is administered by subcutaneous injection. The recommended dose of Finlius is 45 mg administered at Weeks 0 and 4, then every 12 weeks thereafter. Alternatively, 90 mg may be used in patients with a body weight greater than 100 kg.

Crohn's Disease and Ulcerative Colitis – Adults

Intravenous induction dosing

In patients with Crohn's disease and ulcerative colitis, the recommended induction treatment regimen is a single intravenous (IV) tiered dose of Finlius I.V. based on body weight (Table 3) (see 4.4 Administration, **Intravenous Infusion (Crohn's Disease and Ulcerative Colitis)**).

Table 3: Initial dosing of Finlius I.V.

Body Weight of Patient at the time of dosing	Dose[a]	Number of 130 mg Finlius I.V. vials
≤ 55 kg	260 mg	2
> 55 kg to ≤ 85 kg	390 mg	3
> 85 kg	520 mg	4

[a] Recommended dose (approximately 6 mg/kg)

Subcutaneous maintenance dosing

The recommended maintenance dose of Finlius is 90 mg administered subcutaneously. The first subcutaneous dose should be given at week 8 following the intravenous induction dose. Subsequent doses should be given every 8 weeks thereafter.

In some patients, (e.g., those with low inflammatory burden) a single dose of Finlius I.V. followed by 90 mg subcutaneous dosing 8 weeks later, then every 12 weeks thereafter may be considered at the discretion of the treating physician. Patients should have their dose frequency adjusted to every 8 weeks if inadequate response occurs. Consideration should be given to discontinuing treatment in patients who show no evidence of therapeutic benefit 16 weeks after the IV induction dose (see 14 CLINICAL TRIALS).

Immunomodulators and/or corticosteroids may be continued during treatment with Finlius/Finlius I.V. In patients who have responded to treatment with Finlius/Finlius I.V. corticosteroids may be reduced or discontinued in accordance with standard of care.

If therapy is interrupted, resumption of treatment with subcutaneous dosing every 8 weeks is safe and effective.

Special Populations

Renal Insufficiency
Specific studies have not been conducted in patients with hepatic renal insufficiency.

Hepatic Insufficiency
Specific studies have not been conducted in patients with hepatic insufficiency.

4.4 Administration

Subcutaneous Administration

Finlius is supplied as 45 mg and 90 mg pre-filled syringes and 45 mg single-use vials. In pediatric patients, it is recommended that Finlius be administered by a health care provider. A patient may self-inject with Finlius if a physician determines that it is appropriate after proper training in subcutaneous injection technique and disposal (see PATIENT MEDICATION INFORMATION, **How to take Finlius**).

Prior to subcutaneous administration, visually inspect the solution for particulate matter and discoloration. The product is colourless to light yellow and may contain a few small translucent or white particles of protein. This appearance is not unusual for proteinaceous solutions. The product should not be used if solution is discolored or cloudy, or if other particulate matter is present. Finlius does not contain preservatives; therefore, any unused product remaining in the vial or syringe should not be used.

The needle cover on the pre-filled syringe contains dry natural rubber (a derivative of latex), which may cause allergic reactions in individuals sensitive to latex.

Patients should be instructed to inject the prescribed amount of Finlius according to the directions provided in the PATIENT MEDICATION INFORMATION Section.

Intravenous Infusion (Crohn's Disease and Ulcerative Colitis)

Finlius I.V. is supplied in a 130 mg vial. The solution is clear, colorless to light yellow with a pH of approximately 6.0. Intravenous infusion of Finlius I.V. should be administered by qualified health care professionals.

Instructions for dilution of Finlius I.V. (130 mg vial) Crohn's disease and ulcerative colitis
Finlius I.V. must be diluted and prepared for IV infusion by a healthcare professional using aseptic technique.

1. Calculate the dose and the number of Finlius I.V. vials needed based on patient's body weight (see Table 3). Each 26 ml vial of Finlius I.V. contains 130 mg of ustekinumab.
2. Withdraw, and then discard a volume of the 0.9% w/v sodium chloride solution from the 250 ml infusion bag equal to the volume of Finlius I.V. to be added. (26 mL for each vial of Finlius I.V. needed, for 2 vials - discard 52 mL, for 3 vials - discard 78 mL, for 4 vials - discard 104 mL). Alternatively, a 250 mL infusion bag containing 0.45% w/v sodium chloride solution may be used.
3. Withdraw 26 mL of Finlius I.V. from each vial needed and add it to the 250 ml infusion bag. The final volume in the infusion bag should be 250 ml. Gently mix.

4. Visually inspect the diluted solution before administration. Do not use if visibly opaque particles, discoloration or foreign particles are observed.
5. Infuse the diluted solution over a period of at least one hour. Once diluted, the infusion should be completed within eight hours of the dilution in the infusion bag.
6. Use only an infusion set with an in-line, sterile, non-pyrogenic, low protein-binding filter (pore size 0.2 micrometer).
7. Do not infuse Finlius I.V. concomitantly in the same intravenous line with other agents.
8. Finlius I.V. does not contain preservatives. Each vial is for single use only and any unused medicinal product should be disposed of in accordance with local requirements.

If necessary, the diluted infusion solution may be stored at room temperature. The infusion should be completed within 8 hours of the dilution in the infusion bag. Do not freeze. Discard any unused portion of the infusion solution.

4.5 Missed Dose

Patients who miss their scheduled dose of Finlius/Finlius I.V., should be advised to contact their healthcare provider for guidance.

5 OVERDOSAGE

Single doses up to 6 mg/kg intravenously have been administered in clinical studies without dose limiting toxicity. In case of overdosage, it is recommended that the patient be monitored for any signs or symptoms of adverse reactions or effects and appropriate symptomatic treatment be instituted immediately.

For management of a suspected drug overdose, contact your regional poison control centre.

6 DOSAGE FORMS, STRENGTHS, COMPOSITION AND PACKAGING

To help ensure the traceability of biologic products, including biosimilars, health professionals should recognise the importance of recording both the brand name and the non-proprietary (active ingredient) name as well as other product-specific identifiers such as the Drug Identification Number (DIN) and the batch/lot number of the product supplied.

Route of Administration	Dosage Form / Strength / Composition	Non-medicinal Ingredients
Subcutaneous Injection	Sterile solution in single-use pre-filled syringe: 45 mg / 0.5 mL, 90 mg / 1.0 mL or 45 mg / 0.5 mL vial	L-histidine, L-histidine monohydrochloride monohydrate, polysorbate 80, sucrose, and water for injection.
Intravenous Infusion	Sterile solution in single-use vial 130 mg / 26 mL (5 mg/mL)	EDTA disodium salt dihydrate, L-histidine and L-histidine hydrochloride monohydrate, L-methionine, polysorbate 80, and sucrose.

Finlius/Finlius I.V. (ustekinumab) is approved in the following presentations:

Finlius

Pre-filled Syringe:
- 45 mg / 0.5 mL
- 90 mg / 1.0 mL

Single-use Vial:
- 45 mg / 0.5 mL

Finlius I.V.

Single-use Vial:
- 130 mg / 26 mL

Finlius: 45 mg Pre-filled Syringe/Vial or 90 mg Pre-filled Syringe

Finlius is supplied as a single-use, sterile solution for subcutaneous injection in a Type 1 glass syringe with a fixed 27G, half-inch needle and needle cover. The needle cover is manufactured using a dry natural rubber (a derivative of latex) (see 7 WARNINGS AND PRECAUTIONS, **Sensitivity/Resistance, Hypersensitivity Reactions**). The syringe is fitted with a passive safety guard. Finlius is also supplied as a sterile solution for subcutaneous injection in a single-use (Type 1) glass vial with a coated stopper. Only the needle cover on the pre-filled syringe contains latex. All other components of the vial and pre-filled syringe are latex free.

The solution is clear to slightly opalescent, colorless to light yellow with a pH of approximately 6.0. Each mL of Finlius contains 90 mg of ustekinumab. Finlius does not contain preservatives.

There are two strengths of Finlius available: 45 mg of ustekinumab in 0.5 mL and 90 mg of ustekinumab in 1.0 mL.

Finlius is available in single unit packaging presentations.

Finlius I.V.: 130 mg Vial

Finlius I.V., 130 mg vial, is supplied as a sterile solution for intravenous infusion in a single-use (Type 1) glass vial. The vial is stoppered with a latex-free coated stopper. The solution is clear, colorless to light yellow with a pH of approximately 6.0. Each mL of Finlius I.V. contains 5.0 mg of ustekinumab. Finlius I.V. does not contain preservatives. Finlius I.V. is available in one strength, 130 mg in 26 mL, and packaged as 1 single use vial.

7 WARNINGS AND PRECAUTIONS

General

Infections

Ustekinumab is a selective immunomodulator and may have the potential to increase the risk of infections and reactivate latent infections.

Finlius/Finlius I.V. should not be given to patients with any clinically important active infection. If a patient develops a serious infection they should be closely monitored and Finlius/Finlius I.V. should not be administered until the infection resolves or is adequately treated. Caution should be exercised when considering the use of Finlius/Finlius I.V. in patients with a chronic infection or a history of recurrent infection. Patients should be instructed to seek medical advice if signs or symptoms suggestive of an infection occur.

Prior to initiating treatment with Finlius/Finlius I.V., patients should be evaluated for tuberculosis infection. Finlius/Finlius I.V. should not be given to patients with active tuberculosis. Treatment of latent tuberculosis infection should be initiated prior to administering Finlius/Finlius I.V. Anti-tuberculosis therapy should also be considered prior to initiation of Finlius/Finlius I.V. in patients with a past history of latent or active tuberculosis in whom an adequate course of treatment cannot be confirmed. In clinical studies, patients with latent tuberculosis who were concurrently treated with isoniazid did not develop tuberculosis. Patients receiving Finlius/Finlius I.V. should be monitored closely for signs and symptoms of active tuberculosis during and after treatment.

In clinical studies, serious bacterial, fungal, and viral infections were observed in subjects receiving Finlius/Finlius I.V. Serious infections requiring hospitalization occurred in the psoriasis, psoriatic arthritis, Crohn's disease and ulcerative colitis development programs. In the psoriasis and psoriatic arthritis programs serious infections included diverticulitis, cellulitis, pneumonia, appendicitis, cholecystitis and sepsis. In the Crohn's disease program, serious infections included anal abscess, gastroenteritis, pneumonia and sepsis. Other clinically important infections included listeria meningitis and ophthalmic herpes which were reported in one patient each. In the ulcerative colitis program, serious infections included gastroenteritis and pneumonia (see 8 ADVERSE REACTIONS).

Carcinogenesis and Mutagenesis

Malignancies
Ustekinumab is a selective immunomodulator. Immunomodulating agents have the potential to increase the risk of malignancy. Some patients who received ustekinumab in clinical studies developed malignancies (see 8.2 Clinical Trial Adverse Reactions, **Malignancies**).

Finlius/Finlius I.V. has not been studied in patients with a history of malignancy. Caution should be exercised when considering the use of Finlius/Finlius I.V. in patients with a history of malignancy or when considering continuing treatment in patients who develop a malignancy.

All patients, in particular those greater than 60 years of age, those with a medical history of prolonged immunosuppressant therapy or those with a history of PUVA treatment, should be monitored for the appearance of skin cancer (see 8 ADVERSE REACTIONS).

Hepatic/Biliary/Pancreatic

Specific studies have not been conducted in patients with hepatic insufficiency.

Immune

Immunization
It is recommended that live viral or bacterial vaccines not be given concurrently with Finlius/Finlius I.V. (ustekinumab). No data are available on the secondary transmission of infection by live vaccines in patients receiving Finlius/Finlius I.V. Caution is advised when administering some live vaccines to household contacts of patients receiving Finlius/Finlius I.V. because of the potential risk for shedding from the household contact and transmission to the patient. Patients receiving Finlius/Finlius I.V. may receive concurrent inactivated or non-live vaccinations (see 9.4 Drug-Drug Interactions, **Live Vaccines**).

Prior to initiating therapy with Finlius/Finlius I.V., patients should receive all immunizations appropriate for age as recommended by current immunization guidelines. Long term treatment with Finlius does not appear to suppress the immune response to pneumococcal polysaccharide or tetanus vaccines polysaccharide or tetanus vaccines. During the long-term extension of a Phase 3 psoriasis study (PHOENIX 2), patients treated with Finlius for at least 3.5 years mounted similar antibody responses to both pneumococcal polysaccharide and tetanus vaccines as a non-systemically treated psoriasis control group. Similar proportions of patients developed protective levels of anti-pneumococcal and anti-tetanus antibodies and antibody titers were similar among Finlius-treated and control patients. However, non-live vaccinations received during a course of Finlius/Finlius I.V. may not elicit an immune response sufficient to prevent disease.

***Infant exposure* in utero**
For infants exposed *in utero* to ustekinumab, a six month waiting period following birth is recommended before the administration of live vaccines. Administration of a live vaccine prior to 6 months of age may be considered if ustekinumab serum levels are undetectable in the infant,

or the benefit of the vaccination clearly outweighs the risk of administration of live vaccines to the infant (see 7 WARNINGS AND PRECAUTIONS, **Immune, Immunization**).

Concomitant immunosuppressive therapy
In the Phase 3 psoriasis studies, the safety and efficacy of Finlius (ustekinumab) in combination with immunosuppressive agents or phototherapy have not been evaluated. In the Phase 3 psoriatic arthritis studies, concomitant methotrexate did not appear to influence the safety of Finlius. In Crohn's disease and ulcerative colitis studies, concomitant use of immunomodulators (6-mercaptopurine (6-MP), azathioprine (AZA), MTX) or corticosteroids did not appear to influence the overall safety of Finlius/Finlius I.V. Caution should be exercised when considering concomitant use of immunosuppressive agents and Finlius/Finlius I.V. or when transitioning from other biologic agents (see 9 DRUG INTERACTIONS, **Immunosuppressants**).

Immunotherapy
Finlius/Finlius I.V. (ustekinumab) has not been evaluated in patients who have undergone allergy immunotherapy. Finlius/Finlius I.V. may affect allergy immunotherapy. Caution should be exercised in patients receiving or who have received allergy immunotherapy particularly for anaphylaxis.

Neurologic

Reversible Posterior Leukoencephalopathy Syndrome
One case of reversible posterior leukoencephalopathy syndrome (RPLS) was observed during the clinical development programs which included 6709 ustekinumab-treated subjects. The subject, who had received 12 doses of Finlius over approximately two and a half years, presented with headache, seizures and confusion in the setting of alcohol abuse. No additional Finlius injections were administered and the subject fully recovered with appropriate treatment.

RPLS is a neurological disorder, which is not caused by demyelination or a known infectious agent. RPLS can present with headache, seizures, confusion and visual disturbances. Conditions with which it has been associated include preeclampsia, acute hypertension, cytotoxic agents, immunosuppressive therapy and alcohol abuse. Fatal outcomes have been reported.

If RPLS is suspected, administer appropriate treatment and discontinue Finlius/Finlius I.V.

Renal

Specific studies have not been conducted in patients with renal insufficiency.

Reproductive Health: Female and Male Potential

Women of Childbearing Potential: Women of childbearing potential initiating treatment with Finlius/Finlius I.V. should use effective methods of contraception and should receive preconception counselling before planning a pregnancy in accordance with disease specific clinical guidelines. Finlius/Finlius I.V. remains in the circulation for approximately 15 weeks after treatment. In clinical trials, women of childbearing potential were required to use effective

methods of contraception during treatment and for at least 15 weeks after treatment (see 7.1.1 Pregnant Women).

Sensitivity/Resistance

Hypersensitivity Reactions

Systemic
In post-marketing experience, serious allergic reactions, including anaphylaxis and angioedema, have been reported. If an anaphylactic or other serious allergic reaction occurs, institute appropriate therapy and discontinue administration of Finlius/Finlius I.V. (see 8 ADVERSE REACTIONS).

Respiratory
Cases of allergic alveolitis and eosinophilic pneumonia have been reported during post-approval use of ustekinumab. Clinical presentations included cough, dyspnoea, and interstitial infiltrates following one to three doses. Serious outcomes have included respiratory failure and prolonged hospitalisation. Improvement has been reported after discontinuation of ustekinumab and also, in some cases, administration of corticosteroids. If infection has been excluded and diagnosis is confirmed, discontinue ustekinumab and institute appropriate treatment.

Latex sensitivity
The needle cover on the pre-filled syringe contains dry natural rubber (a derivative of latex), which may cause allergic reactions in individuals sensitive to latex.

7.1 Special Populations

7.1.1 Pregnant Women

There is no evidence from animal studies of teratogenicity, birth defects or developmental delays at dose levels up to approximately 45-fold higher than the highest equivalent dose intended to be administered to patients with psoriasis and psoriatic arthritis (see 16 NON-CLINICAL TOXICOLOGY, **Reproductive and Developmental Toxicology**). However, animal reproductive and developmental studies are not always predictive of human response.

It is not known whether ustekinumab can cause fetal harm when administered to a pregnant woman or whether it can affect reproductive capacity. While it is known that human IgG antibodies, like ustekinumab, cross the placenta, no adequate and well-controlled studies have been conducted to evaluate if ustekinumab can cross the human placenta in pregnant women. In developmental toxicity studies in monkeys, ustekinumab was detected in fetal serum following repeated dosing of pregnant monkeys during the period of organogenesis. Although ustekinumab crossed the monkey placenta there was no evidence of teratogenicity in these studies. The decision to continue Finlius during pregnancy should be carefully evaluated taking into consideration clinical practice guidelines to ensure the safety of the pregnant woman and the fetus. Finlius/Finlius I.V. should be given to a pregnant woman only if the benefit clearly outweighs the risk.

7.1.2 Breast-feeding

Limited data from published literature suggests that ustekinumab is excreted in human breast milk in small amounts and it is not known if ustekinumab is absorbed systemically after ingestion. Because of the potential for adverse reactions in nursing infants from ustekinumab, a decision should be made whether to discontinue nursing or to discontinue the drug.

7.1.3 Pediatrics

Pediatrics (< 18 years of age): The efficacy of Finlius (ustekinumab) has been studied in 110 plaque psoriasis patients 12-17 years of age where the majority of patients (77/110) were 15-17 years of age. The efficacy of Finlius was studied in 44 plaque psoriasis patients 6-11 years of age where half of the patients (22/44) were 6-9 years of age. Studies of Finlius in pediatric plaque psoriasis patients below 6 years of age have not been conducted (see 14.1 Clinical Trials by Indication, **Pediatric Plaque Psoriasis (6 to 17 years of age)**).
Pediatric studies of Finlius I.V. have not been conducted. No studies have been conducted in pediatric patients with psoriatic arthritis, Crohn's disease or ulcerative colitis.

7.1.4 Geriatrics

Geriatrics (> 65 years of age): Of the 6709 patients exposed to Finlius/Finlius I.V. in clinical trials, a total of 353 were 65 years or older (183 patients with psoriasis, 69 patients with psoriatic arthritis, 58 patients with Crohn's disease and 43 patients with ulcerative colitis). No major age-related differences in clearance or volume of distribution were observed in clinical studies. Although no overall differences in safety and efficacy were observed between older and younger patients in clinical studies in approved indications, the number of patients aged 65 and over is not sufficient to determine whether they respond differently from younger patients. Patients over 60 years of age should be closely monitored for skin cancer (see 7 WARNINGS AND PRECAUTIONS, **Carcinogenesis and Mutagenesis**).

8 ADVERSE REACTIONS

8.1 Adverse Reaction Overview

The most common adverse reactions (> 5%) in controlled periods of the clinical studies with Finlius/Finlius I.V. (ustekinumab) among all indications were nasopharyngitis, and headache. Most were considered to be mild and did not necessitate drug discontinuation. The overall safety profile of Finlius/Finlius I.V. was similar for patients among all indications. Serious infections and malignancies were also reported in clinical studies (see 8.2 Clinical Trial Adverse Reactions; **Infections** and **Malignancies**).

8.2 Clinical Trial Adverse Reactions

Clinical trials are conducted under very specific conditions. The adverse reaction rates observed in the clinical trials; therefore, may not reflect the rates observed in practice and should not be compared to the rates in the clinical trials of another drug. Adverse reaction information from clinical trials may be useful in identifying and approximating rates of adverse drug reactions in real-world use.

Adults

The safety data described below reflect exposure to Finlius/Finlius I.V. in 14 Phase 2 and Phase 3 studies in 6709 patients (4135 with psoriasis and/or psoriatic arthritis, 1749 with Crohn's disease, and 825 with ulcerative colitis), including 4577 exposed for at least 6 months, 3253 exposed for at least 1 year, 1482 exposed for at least 4 years and 838 for at least 5 years.

Psoriasis and Psoriatic Arthritis

The safety data described below reflect exposure to Finlius in 7 phase 2 and phase 3 studies in 4135 adult patients with psoriasis and/or psoriatic arthritis, including 3256 exposed for at least 6 months, 1482 exposed for at least 4 years and 838 for at least 5 years.

Table 4 summarizes the adverse reactions that occurred at a rate of at least 1% in the Finlius group during the placebo-controlled period of the Phase 3 studies (PHOENIX 1, PHOENIX 2, PSUMMIT 1 and PSUMMIT 2).

Table 4: Adverse reactions reported by > 1% of patients during the placebo controlled period of PHOENIX 1 and 2 and PSUMMIT 1 and 2*

Crohn's Disease

In the three Phase 3 studies and two Phase 2 studies, 1749 subjects with Crohn's disease were exposed to Finlius/Finlius I.V. with 849 exposed for 6 months and 464 exposed for at least 1 year with a total 1106 subject-years of follow-up.

The safety of Finlius/Finlius I.V. was assessed in three Phase 3 randomized, double-blind, placebo-controlled studies. Two 8-week IV induction studies (UNITI-1 and UNITI-2) were followed by a 44-week subcutaneous randomized withdrawal maintenance study (IM-UNITI) representing 52 weeks of therapy. The overall safety profile of Finlius/Finlius I.V. was consistent with the safety profile seen in the psoriasis and psoriatic arthritis clinical studies with the exception of new adverse drug reactions of acne, asthenia, vomiting and vulvovaginal mycotic infections.

The safety profile remained generally consistent throughout the Week 272 safety analysis.

Table 6: Adverse drug reactions reported by ≥ 1%[#] of Finlius I.V. (ustekinumab) treated patients UNITI-1 and UNITI-2 Induction Studies through Week 8

Ulcerative Colitis

The safety of Finlius/Finlius I.V. was evaluated in two randomized, double-blind, placebo-controlled studies (UNIFI-I and UNIFI-M) in 960 adult patients with moderately to severely active ulcerative colitis. The overall safety profile was similar for patients with psoriasis, psoriatic arthritis, Crohn's disease and ulcerative colitis.

The safety profile remained generally consistent throughout the Week 96 safety analysis.

Table 8: Adverse drug reactions reported by ≥ 1%[#] of Finlius I.V. (ustekinumab) treated patients in the ulcerative colitis induction study (UNIFI-I) through Week 8

Infections:

In placebo-controlled studies of patients with psoriasis, psoriatic arthritis, Crohn's disease and ulcerative colitis, the rates of infection or serious infection were similar between Finlius/Finlius I.V.-treated patients and those treated with placebo. In the placebo-controlled period of these clinical studies, the rate of infection was 1.36 per patient-year of follow-up in Finlius/Finlius I.V.-treated patients, and 1.34 per patient-year of follow-up in placebo-treated patients. Serious infections occurred at a rate of 0.03 per patient-year of follow-up in Finlius/Finlius I.V.-treated patients (30 serious infections in 930 patient-years of follow-up) and 0.03 per patient-year of follow-up in placebo-treated patients (15 serious infections in 434 patient-years of follow-up) (see 7 WARNINGS AND PRECAUTIONS).

In the controlled and non-controlled portions of placebo-controlled psoriasis, psoriatic arthritis, Crohn's disease and ulcerative colitis clinical studies representing 11,581 patient-years of exposure in 6,709 patients, the median follow-up was 1.0 years; 1.1 years for psoriatic disease studies, 0.6 year for Crohn's disease studies and 1.0 years for ulcerative colitis studies. The rate of infection was 0.91 per patient-year of follow-up in Finlius/Finlius I.V.-treated patients. The rate of serious infections was 0.02 per patient-year of follow-up in Finlius/Finlius I.V.-treated patients (199 serious infections in 11581 patient-years of follow-up) and included pneumonia, anal abscess, sepsis, cellulitis, diverticulitis, gastroenteritis and viral infections.

Malignancies:

In the placebo-controlled period of the psoriasis, psoriatic arthritis, Crohn's disease and ulcerative colitis clinical studies, the incidence of non-melanoma skin cancer was 0.43 per 100 patient-years of follow-up for Finlius/Finlius I.V.-treated patients (4 patients in 929 patient-years of follow-up) compared with 0.46 per 100 patient-years of follow-up for placebo-treated patients (2 patient in 433 patient-years of follow-up) during the placebo-controlled periods. In a Phase 3 clinical trial (ACCEPT) comparing ustekinumab and etanercept for the treatment of moderate to severe plaque psoriasis, 209 patients received ustekinumab 45 mg, 347 patients received ustekinumab 90 mg, and 347 patients received etanercept. Through Week 12, three (0.5%) subjects in the ustekinumab groups had a non-melanoma skin cancer detected in areas of psoriasis that had cleared with treatment. No skin cancers were observed in the etanercept group but due to the short treatment period, the possible pre-existing malignancies and the differences in efficacy (see 14 CLINICAL TRIALS), the clinical relevance has not been established.

The incidence of malignancies excluding non-melanoma skin cancer was 0.11 per 100 patient-years of follow-up for Finlius/Finlius I.V.-treated patients (1 patient in 929 patient-years of follow-up) compared with 0.23 per 100 patient-years of follow-up for placebo-treated patients (1 patient in 434 patient-years of follow-up) during the placebo-controlled periods. In the ACCEPT trial, through Week 12, one subject (0.2%) with a familial history of breast cancer was diagnosed with breast cancer versus no malignancies in the etanercept group.

In the controlled and non-controlled periods of psoriasis, psoriatic arthritis, Crohn's disease and ulcerative colitis clinical studies representing 11,561 patient-years of exposure in 6709 patients, the median follow-up was 1.0 years; 1.1 years for psoriatic disease studies, 0.6 year for Crohn's

disease studies and 1.0 years for ulcerative colitis studies. Malignancies excluding non-melanoma skin cancers were reported in 62 patients in 11561 patient-years of follow-up. This represents an incidence of 0.54 per 100 patients-years of follow-up for Finlius/Finlius I.V.-treated patients. This rate of malignancies reported in Finlius/Finlius I.V.-treated patients was comparable to the rate expected in the general population (standardized incidence ratio = 0.93 [95% confidence interval: 0.71,1.20]). The most frequently observed malignancies, other than non-melanoma skin cancer, were prostate (16), colorectal (7), melanoma (6), and breast (5). The incidence of non-melanoma skin cancer was 0.49 per 100 patient-years of follow-up for Finlius/Finlius I.V.-treated patients (56 patients in 11545 patient-years of follow-up). The ratio of patients with basal versus squamous cell skin cancers (3:1) is comparable with the ratio expected in the general population.

Among 1569 patients exposed to Finlius for at least 3 years, 0.9% (n= 14) of patients reported NMSC and 1.4% (n=22) of patients reported malignancies excluding NMSC. This represents an incidence of 0.18 and 0.29 per 100 patient-years of follow-up for NMSC and malignancies excluding NMSC, respectively.

Hypersensitivity and Infusion Reactions:

Subcutaneous Administration
During the controlled periods of the psoriasis and psoriatic arthritis clinical studies of ustekinumab, rash and urticaria have each been observed in < 1% of patients.

In the maintenance Crohn's disease study, 1.7% of patients reported a placebo injection-site reaction and 3.0% reported a Finlius injection-site reaction.

Intravenous Administration
In Crohn's disease and ulcerative colitis induction studies, no events of anaphylaxis or other serious infusion reactions were reported. In these studies, 2.2% of 785 placebo treated patients and 1.9% of 790 patients treated with the recommended dose of Finlius I.V. reported adverse events occurring during or within an hour of the infusion.

Immunogenicity:

In psoriasis and psoriatic arthritis clinical studies, up to 12.4% of patients treated with ustekinumab developed antibodies to ustekinumab. In Crohn's disease and ulcerative colitis clinical studies, 2.9% and 4.6% of patients, respectively, developed antibodies to ustekinumab when treated with ustekinumab for approximately 1 year. No apparent association between the development of antibodies to ustekinumab and the development of injection site reactions was observed. 123 of 168 (73%) of psoriasis and psoriatic arthritis patients who were positive for antibodies to ustekinumab had neutralizing antibodies. Patients positive for antibodies to ustekinumab exhibited mean or median serum levels of ustekinumab that were consistently lower than those in patients negative or undetectable for antibodies to ustekinumab and tended to have lower efficacy; however, antibody positivity did not preclude a clinical response.

Immunogenicity tests are generally product-specific. Comparison of antibody rates to those from other products, or comparison of the incidence of antibodies between different tests without cross-validation is not appropriate.

8.2.1 Clinical Trial Adverse Reactions - Pediatrics

Pediatric Patients with Psoriasis

The safety of Finlius has been studied in two phase 3 studies of pediatric patients with moderate to severe plaque psoriasis. The first study was in 110 patients from 12 to 17 years of age treated for up to 60 weeks (CADMUS). The second study was in 44 patients from 6 to 11 years of age treated for up to 56 weeks (CADMUS Jr.). In general, the adverse events reported in these two studies were similar to those seen in previous studies in adults with plaque psoriasis.

Pediatrics (12 to 17 years of age)

Table 10: Adverse reactions reported by > 5% of patients during the placebo-controlled period of CADMUS

	Placebo	Finlius (ustekinumab)	
		Half Standard Dosage	Standard Dosage
Patients treated	37	37	36
Infections and infestations			
Upper respiratory tract infection	2 (5.4%)	1 (2.7%)	3 (8.3%)
Nervous system disorders			
Headache	2 (5.4%)	4 (10.8%)	3 (8.3%)
Gastrointestinal disorders			
Diarrhea	0	0	2 (5.6%)

Pediatrics (6 to 11 years of age)

No new safety issues were identified in pediatric patients 6 to 11 years of age and the observed safety profile in these pediatric patients was similar to the safety profile observed in Finlius-treated adolescent patients 12 to 17 years of age.

8.3 Less Common Clinical Trial Adverse Reactions

The following adverse reactions occurred at rates less than 1% during the controlled period of Finlius/Finlius I.V. clinical trials:

General disorders and administration site conditions: injection site reactions (including swelling, pruritus, induration, hemorrhage, hematoma), asthenia

Infections and infestations: cellulitis, herpes zoster, viral upper respiratory tract infections, vulvovaginal mycotic infections, dental infections

Psychiatric disorders: depression

Respiratory, thoracic and mediastinal disorders: nasal congestion

Skin and Subcutaneous tissue disorders: acne

8.4 Abnormal Laboratory Findings: Hematologic, Clinical Chemistry and Other Quantitative Data

During the placebo-controlled period of the Phase 2 and Phase 3 psoriasis studies (through week 12), an increase in non-fasting blood glucose levels was observed, as shown in Table 11. The clinical significance of these changes in glucose is unknown. No such increase in fasting blood glucose levels was observed in the same subjects.

Table 11: Proportion of patients with elevated non-fasting blood glucose levels in clinical trials

Increase in non-fasting blood glucose levels	Placebo n(%)	Combined ustekinumab group n(%)
Number of Patients	730	1580
Subjects with any abnormal value	49 (6.7%)	83 (5.3%)
Subjects with > 1 abnormal value	9 (1.2%)	35 (2.2 %)

8.5 Post-Market Adverse Reactions

Additional adverse events reported from worldwide post-marketing experience with ustekinumab are included in Table 12. Because these events are reported voluntarily from a population of uncertain size, it is not always possible to reliably estimate their frequency or establish a causal relationship to ustekinumab exposure.

Table 12: Post-marketing Reports

Immune system disorders	Hypersensitivity reactions (including rash, urticaria) Serious allergic reactions (including anaphylaxis and angioedema)
Infections and infestations	Lower respiratory tract infection
Respiratory, thoracic and mediastinal disorders	Allergic alveolitis, eosinophilic pneumonia
Skin and subcutaneous tissue disorders	Pustular psoriasis Exfoliative dermatitis, erythrodermic psoriasis, hypersensitivity vasculitis

9 DRUG INTERACTIONS

9.2 Drug Interactions Overview

Specific drug interaction studies have not been conducted with Finlius/Finlius I.V. (ustekinumab).

In population pharmacokinetic analysis, the effect of the most frequently used concomitant medications in patients with psoriasis (including paracetamol/acetaminophen, ibuprofen, acetylsalicylic acid, metformin, atorvastatin, naproxen, levothyroxine, hydrochlorothiazide, and influenza vaccine) on pharmacokinetics of ustekinumab was explored and none of the concomitant medications exerted significant impact. In psoriatic arthritis studies, concomitant MTX use did not appear to influence the pharmacokinetics of ustekinumab. In Crohn's disease

and ulcerative colitis induction studies, immunomodulators (6-MP, AZA, MTX) were used concomitantly in approximately 30% of patients and corticosteroids were used concomitantly in approximately 40% and 50% of Crohn's disease and ulcerative colitis patients, respectively. Use of these concomitant therapies did not appear to influence the pharmacokinetics of ustekinumab.

9.3 Drug-Behavioural Interactions

The pharmacokinetics of ustekinumab were not impacted by the use of tobacco or alcohol.

9.4 Drug-Drug Interactions

Live Vaccines
Live vaccines should not be given concurrently with Finlius/Finlius I.V. (ustekinumab) (see 7 WARNINGS AND PRECAUTIONS, **Immune, Immunization**). Information regarding the administration of live vaccines in infants exposed to ustekinumab *in utero* is provided earlier in this product monograph (see 7 WARNINGS AND PRECAUTIONS, **Immune, *Infant exposure* in utero**).

Immunosuppressants
The safety and efficacy of Finlius/Finlius I.V. (ustekinumab) in combination with immunosuppressive agents or phototherapy have not been evaluated (see 7 WARNINGS AND PRECAUTIONS, **Immune**, **Concomitant immunosuppressive therapy**).

CYP450 Substrates
The effects of IL-12 or IL-23 on the regulation of CYP450 enzymes were evaluated in an *in vitro* study using human hepatocytes, which showed that IL-12 and/or IL-23 at levels of 10 ng/mL did not alter human CYP450 enzyme activities (CYP1A2, 2B6, 2C9, 2C19, 2D6, or 3A4). The clinical significance of this is not known, although these results do not suggest the need for dose adjustments in patients who are receiving concomitant CYP450 substrates.

9.5 Drug-Food Interactions

Interactions with food have not been established.

9.6 Drug-Herb Interactions

Interactions with herbal products have not been established.

9.7 Drug-Laboratory Test Interactions

Interactions with laboratory tests have not been established.

10 CLINICAL PHARMACOLOGY

10.1 Mechanism of Action

Ustekinumab is a fully human IgG1κ monoclonal antibody, a first-in-class agent that binds with specificity to the shared p40 protein subunit of human cytokines interleukin IL-12 and IL-23.

Ustekinumab inhibits the bioactivity of human IL-12 and IL-23 by preventing p40 from binding to the IL-12Rβ1 receptor protein expressed on the surface of immune cells. Ustekinumab cannot bind to IL-12 or IL-23 that is already bound to IL-12Rβ1 cell surface receptors. Thus, ustekinumab is not likely to contribute to complement or antibody- mediated cytotoxicity of cells expressing IL-12 and/or IL-23 receptors.

IL-12 and IL-23 are heterodimeric cytokines secreted by activated antigen-presenting cells, such as macrophages and dendritic cells. IL-12 stimulates natural killer (NK) cells and drives the differentiation of CD4+ T cells toward the T helper 1(Th1) phenotype and stimulates interferon gamma (IFNγ) production. IL-23 induces the T helper 17 (Th17) pathway and promotes secretion of IL-17A, IL-21, and IL-22. Levels of IL-12 and IL-23 are elevated in the skin and blood of patients with psoriasis, and serum IL12/23p40 distinguishes patients with psoriatic arthritis from healthy individuals, implicating IL-12 and IL-23 in the pathophysiology of psoriatic inflammatory diseases. Genetic polymorphisms in IL23A, IL23R, and IL-12B genes confer susceptibility to these disorders. Additionally, IL-12 and IL-23 are highly expressed in lesional psoriatic skin, and IL-12-mediated induction of IFNγ correlates with psoriasis disease activity. IL-23 responsive T-cells have been found in the entheses in a mouse model of inflammatory arthritis, where IL-23 drives entheseal inflammation. In addition, there is pre-clinical evidence implicating IL-23 and downstream pathways in bone erosion and destruction through up-regulation of receptor activator of nuclear factor-κB ligand (RANKL), which activates osteoclasts.

In patients with Crohn's disease, IL-12 and IL-23 are elevated in the intestines and lymph nodes.

By binding the shared p40 subunit of IL-12 and IL-23, ustekinumab may exert its clinical effects in psoriasis, psoriatic arthritis, Crohn's disease and ulcerative colitis through interruption of the Th1 and Th17 cytokine pathways, which have been implicated as contributors in the pathology of these diseases.

10.2 Pharmacodynamics

Treatment with ustekinumab resulted in significant improvement in histological measures of psoriasis including epidermal hyperplasia and cell proliferation. These results are consistent with the clinical efficacy observed. In patients with psoriasis and/or psoriatic arthritis Finlius (ustekinumab) had no apparent effect on the percentages of circulating immune cell populations including memory and naive T-cell subsets or circulating cytokine levels. Systemic markers of inflammation were measurable in the serum at baseline and 4 markers (MDC, VEGF, MCSF-1 and YKL-40) showed modest differences in concentration post-treatment in Finlius-treated patients as compared to placebo.

Treatment with ustekinumab resulted in a decrease in the gene expression of its molecular targets IL-12 and IL-23 as shown by analyses of mRNA obtained from lesional skin biopsies of psoriatic patients at baseline and up to two weeks post-treatment. In addition, ustekinumab down-regulated the gene expression of inflammatory cytokines and chemokines such as MCP-1, TNF-alpha, IP-10 and IL-8 in lesional skin biopsies. These results are consistent with the significant clinical benefit observed with ustekinumab treatment.

In psoriasis and psoriatic arthritis studies, clinical response (improvement in PASI or ACR measurements, respectively) appeared to be related to serum ustekinumab levels. Patients with psoriasis with higher PASI response had higher median serum concentrations of ustekinumab than those with lower clinical responses. In psoriasis studies, the proportion of patients with psoriasis who achieved PASI 75 response increased with increasing serum levels of ustekinumab. The proportion of patients who achieved PASI 75 response at Week 28 increased with increasing serum ustekinumab trough levels at Week 28. In psoriatic arthritis studies, patients achieving an ACR 20 response had higher median serum concentrations of ustekinumab than ACR 20 non-responders. The proportion of patients who achieved ACR 20 and ACR 50 response increased with increasing serum levels of ustekinumab.

In patients with Crohn's disease and ulcerative colitis, treatment with Finlius/Finlius I.V. resulted in a significant decrease in inflammatory markers including C-Reactive Protein (CRP) and fecal calprotectin. In patients with Crohn's disease, decrease in gene expression for IL-12Rβ1and IL-23 was observed in inflamed colon tissue in responders to Finlius I.V. treatment while no significant changes were observed in placebo treated patients at Week 6.

10.3 Pharmacokinetics

The median pharmacokinetic parameters of ustekinumab following a single SC administration in adult patients with psoriasis are shown in Table 11. The pharmacokinetic parameters of ustekinumab (CL/F, V_z/F, and $t_{1/2}$) were generally comparable between 45 mg and 90 mg subcutaneous doses.

Table 11: Summary of Pharmacokinetic Parameters of Ustekinumab Following a Single 45 or 90 mg Subcutaneous Administration in Adult Patients with Psoriasis

Dose	45 mg			90 mg		
PK parameter	N	Median (Range)	Mean (± SD)	N	Median (Range)	Mean (± SD)
C_{max} (mcg/mL)	22	2.4 (1.0, 5.4)	2.7 (± 1.2)	24	5.3 (1.2, 12.3)	6.1 (± 3.6)
t_{max} (day)	22	13.5 (1.9, 58.2)	15.3 (± 13.5)	24	7.0 (2.9, 27.1)	9.9 (± 7.4)
AUC (mcg·day/mL)	18	84.9 (31.2, 1261.9)	196.7 (± 298.2)	21	226.9 (57.1, 755.5)	274.9 (± 206.5)
$t_{1/2}$ (day)	18	19.8 (5.0, 353.6)	45.6 (± 80.2)	21	21.2 (13.6, 85.8)	26.7 (± 19.3)
CL/F (mL/day/kg)	18	5.3 (0.2, 12.9)	5.8 (± 3.5)	21	4.5 (1.5, 14.9)	5.7 (± 3.6)
V_z/F (mL/kg)	18	154.2 (32.6, 280.5)	160.5 (± 64.5)	21	160.5 (37.3, 354.1)	178.7 (± 85.2)

Source data: C0379T04 CSR

Dose Linearity: The systemic exposure of ustekinumab (C_{max} and AUC) increased in a linear manner following a single subcutaneous administration at doses ranging from approximately 24 mg to 240 mg in patients with psoriasis.

Single Dose vs. Multiple Doses: Serum concentration-time profiles of ustekinumab were generally predictable after single or multiple subcutaneous dose administrations on the basis of a one-compartment model. In patients with psoriasis, steady-state serum concentrations of ustekinumab were achieved by Week 28 after initial subcutaneous doses at Weeks 0 and 4 followed by doses every 12 weeks. The median steady-state trough concentration ranged from 0.21 mcg/mL to 0.26 mcg/mL (45 mg; n = 242 to 390) and from 0.47 mcg/mL to 0.49 mcg/mL (90 mg; n = 236 to 386) in patients with psoriasis. There was no apparent accumulation in serum ustekinumab concentration over time when given subcutaneously every 12 weeks.

Population Pharmacokinetic Analysis
Of the demographic factors (e.g., gender, race, age, body size), baseline patient physical or biochemical characteristics, medical or medication history, or concomitant medications evaluated in a population pharmacokinetic analysis, only body weight, diabetes comorbidity, and positive immune response to ustekinumab were found to be important covariates affecting the systemic exposure to ustekinumab in patients with moderate to severe psoriasis. Body weight and positive immune response to ustekinumab were also found to be important covariates affecting the systemic exposure to ustekinumab in subjects with psoriatic arthritis. Clinical relevance of the effects of these important covariates, however, needs to be evaluated concurrently with clinical efficacy and safety data.

Absorption:
The median time to reach the maximum serum concentration (t_{max}) was 8.5 days after a single 90 mg subcutaneous administration in healthy subjects (n = 30). The median t_{max} values of ustekinumab following a single subcutaneous administration of either 45 mg or 90 mg in patients with psoriasis were comparable to that observed in healthy subjects.

The absolute bioavailability (F) of ustekinumab following a single subcutaneous administration was estimated to be 57.2% in patients with psoriasis (n = 17).

Following the recommended IV induction dose, median peak serum ustekinumab concentration was 126.1 mcg/mL (IQ range 106.1 – 146.2 mcg/mL) in patients with Crohn's disease and 127.0 mcg/mL (IQ range 109.2 – 145.9 mcg/mL) in patient with ulcerative colitis. Starting at Week 8, subcutaneous maintenance dosing of 90 mg ustekinumab was administered every 8 or 12 weeks. Steady state ustekinumab concentration was achieved by the start of the second maintenance dose.

Following subcutaneous maintenance dosing of 90 mg ustekinumab every 8 weeks, median steady-state trough concentrations ranged from 1.97 mcg/mL to 2.24 mcg/mL in patients with Crohn's disease and 2.69 mcg/mL to 3.09 mcg/mL in patients with ulcerative colitis. Following subcutaneous maintenance dosing of 90 mg ustekinumab every 12 weeks, median steady state trough concentrations ranged from 0.61 mcg/mL to 0.76 mcg/mL in patients with Crohn's disease and 0.92 mcg/mL to 1.19 mcg/mL in patients with ulcerative colitis. The steady-state trough ustekinumab levels resulting from 90 mg ustekinumab every 8 weeks were associated

with higher clinical remission rates as compared to the steady-state trough levels following 90 mg every 12 weeks.

Distribution:
The median apparent volume of distribution during the terminal phase (V_z/F) following a single subcutaneous administration to patients with psoriasis ranged from 76 to 161 mL/kg (n = 4 to 21).

In a population pharmacokinetic analysis of ustekinumab in patients with Crohn's disease, the total volume of distribution at steady-state was 4.62 L and 4.44 L in patients with ulcerative colitis.

Metabolism:
The exact metabolic pathway for ustekinumab is unknown.

Elimination:
The median apparent clearance (CL/F) following a single subcutaneous administration to patients with psoriasis ranged from 2.7 to 5.3 mL/day/kg. The median half-life ($t_{1/2}$) of ustekinumab was approximately 3 weeks in patients with psoriasis and/or psoriatic arthritis, Crohn's disease and ulcerative colitis ranging from 15 to 32 days across all psoriasis and psoriatic arthritis studies (n = 4 to 55).

In a population pharmacokinetic analysis , the clearance of ustekinumab was 0.19 L/day (95% CI: 0.185, 0.197) in patients with Crohn's disease and 0.19 L/day (95% CI: 0.179, 0.192) in patients with ulcerative colitis with an estimated median terminal half-life of approximately 19 days in patients with Crohn's disease and ulcerative colitis.

Special Populations and Conditions

- **Pediatrics**
  Pediatrics (< 18 years of age): Studies of Finlius in pediatric patients with plaque psoriasis below 6 years of age have not been conducted. No pharmacokinetic data are available in pediatric patients with Crohn's disease or ulcerative colitis. Pediatric studies of Finlius I.V. have not been conducted.

  Serum ustekinumab concentrations in plaque psoriasis patients 6 to 17 years of age, treated with the recommended weight-based dose were generally comparable to those in the adult psoriasis population treated with the adult dose.

- **Geriatrics**
  Geriatrics (> 65 years of age): No specific studies have been conducted in elderly patients. A population pharmacokinetic analysis indicated there were no apparent changes in CL/F and V/F estimates in patients ≥ 65 years.

- **Sex, Ethnic Origin and Genetic Polymorphism:** The apparent clearance of ustekinumab was not impacted by sex, age, or race.

- **Hepatic Insufficiency:** No pharmacokinetic data are available in patients with impaired hepatic function.

- **Renal Insufficiency:** No pharmacokinetic data are available in patients with renal insufficiency.

- **Obesity:**
  Impact of Weight on Pharmacokinetics:
  Serum ustekinumab concentrations were affected by weight in patients with psoriasis and/or psoriatic arthritis. When given the same dose, patients of higher weight (> 100 kg) had lower median serum ustekinumab concentrations compared with those in patients of lower weight (≤ 100 kg). However, across doses, the median trough serum concentrations of ustekinumab in patients with higher weight (> 100 kg) in the 90 mg group were comparable to those in patients with lower weight (≤ 100 kg) in the 45 mg group.

11 STORAGE, STABILITY AND DISPOSAL

Finlius/Finlius I.V. must be refrigerated at 2 to 8ºC and protected from light. Keep the product in the original carton to protect from light until the time of use. Do not freeze. Do not shake.

If needed, individual Finlius pre-filled syringes may be stored at room temperature up to 30°C for a maximum single period of up to 30 days in the original carton with protection from light. Record the date when the pre-filled syringe is first removed from the refrigerator and the new expiry date on the carton in the spaces provided. The new expiry date must not exceed the original expiry date printed on the carton. Once a syringe has been stored at room temperature, it should not be returned to the refrigerator. Discard the syringe if not used within 30 days at room temperature storage.

If necessary, the diluted Finlius I.V. infusion solution may be stored for up to eight hours at room temperature. Do not freeze. Discard any unused portion of the infusion solution.

12 SPECIAL HANDLING INSTRUCTIONS

Following administration of Finlius/Finlius I.V., discard any unused portion. The syringe should be disposed of in a puncture-resistant container for syringes and needles. Patients or caregivers should be instructed in the technique as well as proper syringe and needle disposal, and not to reuse these items.

PART II: SCIENTIFIC INFORMATION

13 PHARMACEUTICAL INFORMATION

Drug Substance

Proper name: ustekinumab

Chemical name: ustekinumab

Molecular formula and molecular mass: Ustekinumab is a fully human IgG1κ mAb, with an approximate molecular weight of 148,600 daltons.

Physicochemical properties: FINLIUS® (ustekinumab) is clear to slightly opalescent, colourless to light yellow with a pH of approximately 6.0. Finlius I.V. is clear, colorless to light yellow with a pH of approximately 6.0.

Product Characteristics:

Finlius

Finlius (ustekinumab) is supplied as a single-use, sterile solution for subcutaneous injection in a Type 1 glass syringe with a fixed 27G, half-inch needle and needle cover. The needle cover is manufactured using a dry natural rubber (a derivative of latex) (see 7 WARNINGS AND PRECAUTIONS, **Sensitivity/Resistance, Hypersensitivity Reactions**). The syringe is fitted with a passive safety guard. Finlius is also supplied as a sterile solution for subcutaneous injection in a single-use (Type 1) glass vial for SC administration‡.

Finlius is supplied as 2 dosage presentations at 45 mg in 0.5 mL volume as a pre-filled syringe or a single-use vial or at 90 mg in a 1 mL volume as a pre-filled syringe. Each 1 mL of Finlius solution contains 90 mg ustekinumab. No preservatives are present.

Finlius I.V.

Finlius I.V., 130 mg vial, is supplied as a sterile solution for intravenous infusion in a single-use (Type 1) glass vial. The vial is stoppered with a coated stopper.

Viral Inactivation

Ustekinumab is produced by a recombinant cell line cultured by continuous perfusion and is purified by a series of steps that includes measures to inactivate and remove viruses.

14 CLINICAL TRIALS

14.1 Clinical Trials by Indication

Plaque Psoriasis - Adults

The safety and efficacy of Finlius were assessed in two multicentre, randomized, double-blind, placebo-controlled studies (PHOENIX 1 and PHOENIX 2) in patients 18 years of age and older with chronic (> 6 months) plaque psoriasis who had a minimum body surface area (BSA) involvement of 10%, and Psoriasis Area and Severity Index (PASI) score ≥ 12 and who were candidates for phototherapy or systemic therapy. Patients with guttate, erythrodermic, or pustular psoriasis were excluded from the studies. No concomitant anti-psoriatic therapies were allowed during the study with the exception of low-potency topical corticosteroids on the face and groin after Week 12. A total of 1996 patients were enrolled in the two studies. The safety and efficacy of Finlius beyond 5 years have not been established.

In addition, a multicenter, randomized, active-controlled study (ACCEPT) compared the safety and efficacy of Finlius and etanercept in patients 18 years of age and older with chronic (> 6 months) plaque psoriasis who had a minimum BSA involvement of 10%, PASI score ≥ 12, Physician Global Assessment (PGA) score ≥ 3, who were candidates for phototherapy or systemic therapy, and who had had an inadequate response to, intolerance to, or contraindication to cyclosporine, methotrexate, or PUVA therapy. A total of 903 patients were enrolled in the study.

Baseline disease characteristics across PHOENIX 1 and 2 were similar (Table 12 and Table 13). In both studies, patients in all treatment groups had a median baseline PASI score ranging from 17 to 18. Approximately two-thirds of all patients had received prior phototherapy, 69% had received either prior conventional systemic or biologic therapy for the treatment of psoriasis, with 56% receiving prior conventional systemic therapy and 43% receiving prior biologic therapy. A total of 28% of study patients had a history of psoriatic arthritis. Similar disease characteristics were also seen in the ACCEPT trial (Table 12 and Table 13).

Table 12: Summary of patient demographics for PHOENIX 1, PHOENIX 2 and ACCEPT

Study #	Study design	Dosage, route of administration and duration	Study subjects (n)	Mean age (Range)	Sex
C0743T08 (PHOENIX 1)	Double-Blind Placebo-Controlled	Fixed doses: Placebo (N = 255) Placebo → 45 mg SC regimen[a] (N = 123) Placebo → 90 mg SC regimen[a] (N = 120) 45 mg SC Weeks 0, 4 then q12w (N = 255) 90 mg SC Weeks 0, 4 then q12w (N = 256)	N=766	45.3 (19,76)	M=531 F=235

Prior conventional systemic or biologic therapy[a]	189 (74%)	364 (71%)	287 (70%)	536 (65%)	218(63%)	337 (61%)
Failed to respond to, had contraindication for, or intolerant to ≥ 1 conventional therapy[a]	139 (55%)	270 (53%)	254 (62%)	490 (60%)	347 (100%)	555 (100%)
Failed to respond to, had contraindication for, or intolerant to ≥ 3 conventional therapies[a]	30 (12%)	54 (11%)	66 (16%)	134 (16%)	52 (15%)	78 (14%)

[a] In PHOENIX 1 and 2, conventional systemic agents include acitretin, PUVA, methotrexate, and cyclosporine. In ACCEPT, conventional systemic agents included PUVA, methotrexate, and cyclosporine. All patients were required to be etanercept naïve at baseline in ACCEPT, but in PHOENIX 1 and 2 patients may have previously received etanercept.

PHOENIX 1 evaluated the safety and efficacy of Finlius versus placebo in 766 patients with plaque psoriasis. Patients were randomized in equal proportion to placebo, 45 mg or 90 mg of Finlius. Patients randomized to Finlius received 45 mg or 90 mg doses at Weeks 0 and 4 followed by the same dose every 12 weeks. Patients randomized to receive placebo at Weeks 0 and 4 crossed over to receive Finlius (either 45 mg or 90 mg) at Weeks 12 and 16 followed by the same dose every 12 weeks. To evaluate the efficacy of every 12-week dosing, patients who were PASI 75 responders at both Weeks 28 and 40 were re-randomized to either continue dosing of Finlius every 12 weeks or to placebo (i.e., withdrawal of therapy). Patients withdrawn from Finlius at Week 40 reinitiated Finlius at their original dosing regimen when they experienced at least a 50% loss of their PASI improvement obtained at Week 40. Patients were followed for at least 76 weeks.

PHOENIX 2 evaluated the safety and efficacy of Finlius versus placebo in 1230 patients with plaque psoriasis. This study design was identical to PHOENIX 1 through Week 28.

Dose Adjustment (every 8 weeks)
At Week 28, PHOENIX 1 patients who were nonresponders (< PASI 50 response) discontinued treatment and patients who were partial responders (≥ PASI 50 response and < PASI 75 response) were adjusted to every-8-week dosing. PASI 75 responders at Week 28 who became partial responders or nonresponders at Week 40 were adjusted to every-8-week dosing.

In PHOENIX 2, patients who were partial responders at Week 28 were re-randomized to either continue every 12 weeks dosing of Finlius or to switch to every 8 weeks dosing.

All patients were followed for up to 76 weeks in PHOENIX 1 and up to 52 weeks in PHOENIX 2 following first administration of study treatment.

In both studies, the primary endpoint was the proportion of patients who achieved a reduction in score of at least 75% from baseline at Week 12 by the PASI (PASI 75). Patients achieving ≥ 90% improvement in PASI from baseline (PASI 90) were considered PASI 90 responders and patients with ≥ 50% improvement in PASI from baseline (PASI 50) were considered PASI 50 responders. Another key efficacy assessment was the Physician's Global Assessment (PGA), a 6-category scale ranging from 0 (cleared) to 5 (severe) that indicates the physician's overall assessment of psoriasis focusing on plaque thickness/induration, erythema, and scaling.

The Dermatology Life Quality Index (DLQI), a dermatology-specific quality of life instrument designed to assess the impact of the disease on a patient's quality of life, was assessed in both PHOENIX 1 and PHOENIX 2. Other efficacy assessments included the Nail Psoriasis Severity Index (NAPSI), a physician-assessed score that measures the severity of nail involvement (PHOENIX 1); the Itch Visual Analog Scale (VAS), used to assess the severity of itch at the time of the assessment (PHOENIX 1); the Hospital Anxiety and Depression Scale (HADS), a self-rating tool developed to evaluate psychological measures in patients with physical ailments (PHOENIX 2); and the Work Limitations Questionnaire (WLQ), a 25-item, self-administered questionnaire that was used to measure the impact of chronic health conditions on job performance and work productivity among employed populations (PHOENIX 2).

The ACCEPT trial compared the efficacy of Finlius to etanercept and evaluated the safety of Finlius and etanercept in moderate to severe psoriasis patients. The active-controlled portion of the study was from Week 0 to Week 12, during which the efficacy and safety of etanercept and 2 dose levels of Finlius were evaluated. This trial was powered to test the superiority of each dose level to etanercept and the primary endpoint was the proportion of patients who achieved a PASI 75 at week 12.

Study results

The results of PHOENIX 1 and PHOENIX 2 for key psoriasis clinical outcomes are presented in Table 14.

Efficacy at the Primary Endpoint, PHOENIX 1 and PHOENIX 2

The onset of action with Finlius was rapid and improvement was seen within 2 weeks of the first dose. In both the PHOENIX 1 and PHOENIX 2 studies, a significantly greater proportion of patients randomized to treatment with Finlius were PASI 75 responders compared with placebo at Week 12 (Table 14). In the PHOENIX 1 study, 67% and 66% of patients receiving Finlius 45 mg and 90 mg, respectively, achieved a PASI 75 response at Week 12 compared with 3% of patients receiving placebo. In the PHOENIX 2 study, 67% and 76% of patients receiving Finlius 45 mg and 90 mg, respectively, achieved a PASI 75 response at Week 12 compared with 4% of patients receiving placebo.

All 3 components of the PASI (plaque thickness/induration, erythema, and scaling) contributed comparably to the improvement in PASI.

The efficacy of Finlius was significantly superior (p<0.001) to placebo across all subgroups defined by baseline demographics, clinical disease characteristics (including patients with a history of psoriatic arthritis) and prior medication usage. While pharmacokinetic modelling suggested a trend towards higher CL/F in patients with diabetes, a consistent effect on efficacy was not observed.

Other efficacy measures at Week 12

In both PHOENIX 1 and PHOENIX 2, compared with placebo, significantly greater proportions of patients randomized to 45 mg or 90 mg Finlius achieved a cleared or minimal PGA score, and significantly greater proportions of patients randomized to 45 mg or 90 mg Finlius were PASI 50, PASI 90 and PASI 100 responders at Week 12 (Table 14). In the PHOENIX 1 study, 60% and 62% of the patients treated with 45 mg and 90 mg Finlius, respectively, achieved PGA scores of cleared or minimal compared with 4% of placebo-treated patients. In PHOENIX 2, 68% and 73% of patients receiving 45 mg or 90 mg Finlius, respectively, had cleared or minimal PGA scores compared with 5% of the placebo patients. In PHOENIX 1, PASI 90 was achieved by 42% and 37% of the patients treated with 45 mg and 90 mg Finlius, respectively, compared with 2% of placebo-treated patients. In addition, a significantly higher proportion of subjects treated with either 45 mg (13%) or 90 mg (11%) achieved a PASI of 0 (i.e., PASI 100 response) compared with the placebo group (0.0%; $p<0.001$). In PHOENIX 2, the percentage of patients achieving PASI 100 and PASI 90 was 18% and 42%, respectively, in the 45 mg Finlius group, and 18% and 51%, respectively, in the 90 mg Finlius group versus 1% in the placebo group. The percentage of patients achieving PASI 50 in PHOENIX 1 was 84% and 86% in the 45 mg and 90 mg Finlius groups, respectively, compared with 10% in the placebo group. Similarly, 84% of patients treated with 45 mg Finlius, 89% of patients treated with 90 mg Finlius and 10% of patients treated with placebo reached PASI 50 in PHOENIX 2 (Table 14).

Response over time

In PHOENIX 1, significantly greater proportions of Finlius-treated patients had PASI 50 responses (9% and 10% for the 45 mg and 90 mg groups, respectively) compared with placebo (2%) by Week 2 ($p<0.001$). Significantly greater proportions of patients treated with Finlius achieved PASI 75 responses (9% and 12% for the 45 mg and 90 mg Finlius groups, respectively) compared with placebo (0.4%) by Week 4 ($p<0.001$). Maximum response was generally achieved by Week 24 in the 45 mg and 90 mg Finlius treatment groups, and response rates were generally sustained through Week 36 (Figure 1). In PHOENIX 1, PASI 75 rates at Week 24 were 76% for the 45 mg group, and 85% for the 90 mg group. Higher response rates were observed in patients receiving Finlius 90 mg than in those receiving Finlius 45 mg by Week 16 and these higher response rates were sustained through Week 36 (Figure 1). Similar results were observed in the PHOENIX 2 study through Week 28.

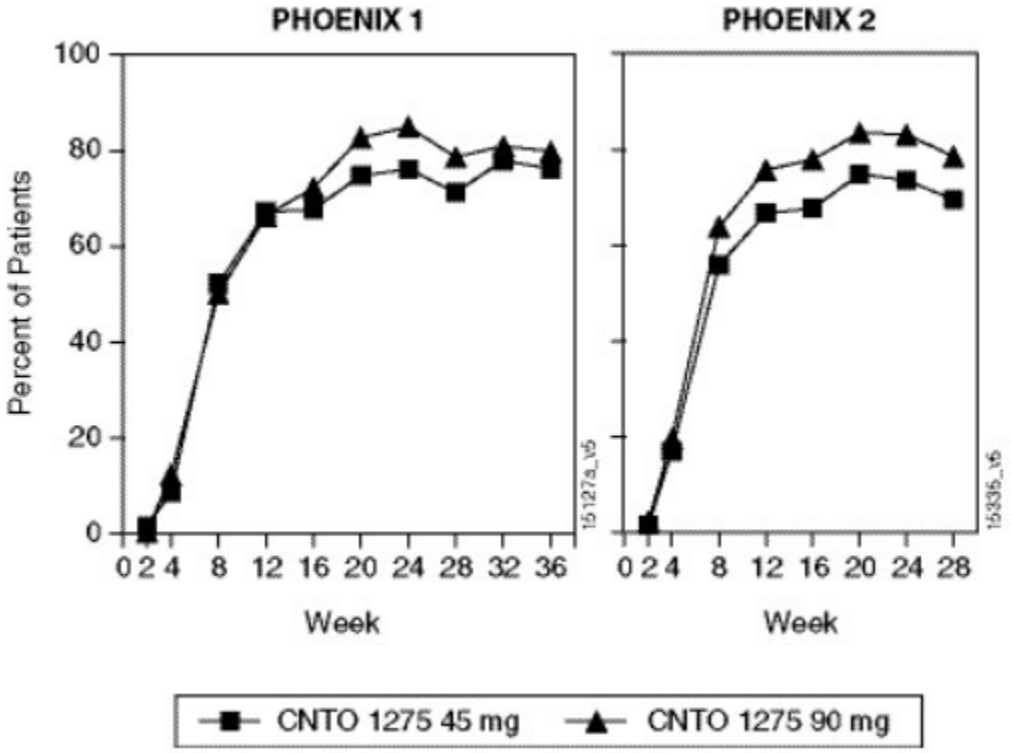

Figure 1: PASI 75 response over time in PHOENIX 1 and 2

In prespecified analyses of efficacy by body weight in PHOENIX 1 and PHOENIX 2, no consistent pattern of dose response was seen in patients ≤ 100 kg. In patients who weighed > 100 kg, higher PASI 75 response rates were seen with 90 mg dosing compared with 45 mg dosing, and a higher proportion of patients receiving 90 mg dosing had PGA scores of cleared or minimal compared with patients receiving 45 mg dosing (Table 15).

Therapeutic benefit of long-term continuous use

At Week 40 in PHOENIX 1, among patients who were PASI 75 responders at both weeks 28 and 40, 162 patients were re-randomized to receive Finlius at 45 mg and 90 mg given every 12 weeks (maintenance treatment) and 160 were re-randomized to receive placebo (treatment withdrawal). Maintenance of PASI 75 was significantly superior with continuous maintenance treatment compared with treatment withdrawal ($p<0.001$) through at least 1.5 years of follow-up. Similar results were seen with each dose of Finlius.

At 1 year (Week 52), 89% of patients re-randomized to maintenance treatment were PASI 75 responders compared with 63% of patients re-randomized to placebo (treatment withdrawal) ($p<0.001$) (Table 16). At Week 76, 84% of patients re-randomized to maintenance treatment were PASI 75 responders compared with 19% of patients re-randomized to placebo (treatment withdrawal) ($p<0.001$). Through 18 months (Week 76), the proportion of subjects in the combined maintenance treatment group who were PASI 50 responders remained consistently at greater than 95%. By contrast, the proportion of PASI 50 responders in the combined withdrawal group progressively decreased over time such that by Weeks 52 and 76, only 50% and 31% remained as PASI 50 responders respectively. Among patients withdrawn from treatment, the rates of loss of the various PASI responses (PASI 50, 75, 90) were generally comparable in all groups regardless of dose. No rebound of psoriasis occurred in patients who were randomized to treatment withdrawal. Among the patients who reached PASI 75 response at weeks 28 and 40 and were re-randomized to maintenance treatment, 82% were PASI 75 responders at 3 years (Week 148). At 5 years (Week 244), 80% of patients (112/140) re-randomized to maintenance treatment were PASI 75 responders.

Efficacy of retreatment

In PHOENIX 1, after randomized withdrawal from therapy at week 40, patients reinitiated their original Finlius treatment regimen after a loss of ≥ 50% of PASI improvement. Retreatment with Finlius resulted in 71% of evaluated patients regaining PASI 75 response within 8 weeks after

reinitiating therapy and 85% of evaluated patients regaining PASI 75 response within 12 weeks after reinitiating therapy.

Dosing interval adjustment
In PHOENIX 1, Week 28 and Week 40 partial responders and Week 40 nonresponders were adjusted from every-12-week to every-8-week dosing. Approximately 40%-50% of Week 28 partial responders to every-12-week dosing achieved PASI 75 response after adjustment to every-8-week dosing and this proportion of PASI 75 responders was maintained through Week 52. A similar proportion of patients who were PASI 75 responders at Week 28 and subsequently became partial responders or nonresponders at Week 40 achieved PASI 75 response following a dosing interval adjustment to every 8 weeks.

In PHOENIX 2, among patients initially randomized to 90 mg dosing who were partial responders at Week 28, dosing adjustment to every 8 weeks resulted in consistently superior efficacy as compared with continued every 12 weeks dosing: Partial responders randomized to 90 mg every 8 weeks achieved PASI 75 response at more visits between Weeks 40 and 52 than partial responders randomized to continue 90 mg every 12 weeks ($p = 0.014$), and a higher proportion of subjects achieved a PASI 75 response at Week 52 (68.8% with every 8 weeks dosing versus 33.3% with every 12 weeks dosing; $p = 0.004$). Among patients initially randomized to 45 mg dosing who were partial responders at Week 28, response rates were not higher among patients in whom dosing was adjusted to every 8 weeks compared with patients who continued every 12 weeks dosing.

Quality of life
In PHOENIX 1 and 2, the mean baseline DLQI scores ranged from 11 to 12. In PHOENIX 1, the mean baseline SF-36 Physical Component ranged from 47-49 and the mean baseline SF-36 Mental Component was approximately 50. Quality of life improved significantly in patients randomized to 45 mg or 90 mg Finlius compared with patients randomized to placebo as evaluated by DLQI in PHOENIX 1 and 2 and SF-36 in PHOENIX 1. Quality of life improvements were significant as early as 2 weeks in patients treated with Finlius ($p<0.001$) and these improvements were maintained over time with continued dosing.

In PHOENIX 1, 65% and 71% of patients treated with 45 mg and 90 mg of Finlius, respectively, showed a clinically meaningful reduction (5 or more points) in DLQI from baseline at week 12 compared to 18% in placebo group ($p<0.001$ for both groups compared with placebo). Furthermore, 33% and 34% of patients treated with 45 mg and 90 mg of Finlius, respectively, showed a DLQI score of 0 compared to 1% in the placebo group ($p<0.001$ for both groups compared with placebo), indicating no impairment in QOL from disease or treatment in these patients. In PHOENIX 2, 72% and 77% of patients treated with 45 mg and 90 mg of Finlius, respectively, showed a clinically meaningful reduction (5 or more points) in DLQI from baseline at Week 12 compared to 21% in placebo group ($p<0.001$ for both groups compared with placebo). In addition, 37% and 39% of patients treated with 45 mg and 90 mg of Finlius, respectively, showed a DLQI score of 0 compared to 1% in the placebo group ($p<0.001$ for both groups compared with placebo).

In PHOENIX 1, the median baseline NAPSI score for nail psoriasis was 4.0 and the median number of fingernails involved with psoriasis was 8.0. Nail psoriasis improved significantly in

patients randomized to 45 mg or 90 mg Finlius compared with patients randomized to placebo when measured by the NAPSI score (p≤0.001). Improvements in physical and mental component summary scores of the SF-36 and in the Itch Visual Analogue Scale (VAS) were also significant in each Finlius treatment group compared with placebo (p<0.001). In PHOENIX 2, the Hospital Anxiety and Depression Scale (HADS) and Work Limitations Questionnaire (WLQ) were also significantly improved in each Finlius treatment group compared with placebo (p<0.001).

ACCEPT

Significantly greater proportions of subjects treated with Finlius 45 mg (67%; p = 0.012) or 90 mg (74%; p < 0.001) were PASI 75 responders at Week 12 compared with the etanercept group (56.8%). PASI 90 response was observed in 36% and 45 % of patients in the Finlius 45 mg and 90 mg groups, respectively, compared with 23% of patients receiving etanercept (p<0.001 for each comparison versus etanercept). PASI 100 response was observed in 12% and 21% of patients in the Finlius 45 mg and 90 mg groups, respectively, compared to 6% of patients receiving etanercept (Table 17). In addition, a greater proportion of patients in the Finlius 45 mg and 90 mg treatment groups achieved a PGA score of “cleared” or “minimal” (65 % and 71 %, respectively) compared with patients in the etanercept treatment group (49 %) (p<0.001 for each comparison versus etanercept).

Greater proportions of subjects in the Finlius 45 mg and 90 mg groups achieved PASI 75 responses when compared with subjects in the etanercept group regardless of a subject's previous psoriasis medication history.

Pediatric Plaque Psoriasis (6 to 17 years of age)

The safety and efficacy of Finlius in pediatric patients with plaque psoriasis was assessed in two multicenter phase 3 studies, CADMUS and CADMUS Jr.

Plaque Psoriasis – Pediatrics (12 to 17 years of age): CADMUS

The efficacy of Finlius was studied in 110 pediatric patients 12 to 17 years of age, in a multicenter, Phase 3, randomized, double blind, placebo-controlled study (CADMUS). Two distinct, subcutaneous weight based dosages of Finlius were studied. Randomization was stratified by investigational site and baseline weight (≤ 60 kg or > 60 kg).

Patients were randomized to one of four treatment groups (Groups 1, 2, 3a and 3b) at week 0 as follows:
Group 1: Finlius half-standard dosage at Weeks 0 and 4 followed by doses every 12 weeks, with the last dose at Week 40.
Group 2: Finlius standard dosage at Weeks 0 and 4 followed doses every 12 weeks, with the last dose at Week 40.
Group 3: Placebo at Weeks 0 and 4. At Weeks 12 and 16, subjects crossed over to receive either Finlius half-standard dosage (Group 3a) or standard dosage (Group 3b) followed by doses every 12 weeks, with the last dose at Week 40. The dosage assignment (Group 3a or 3b) following crossover was randomly assigned at week 0, ensuring that the assignment remained double blinded throughout the duration of the study.
All subjects were followed for efficacy through Week 52 and for safety through Week 60.

Adolescent patients with a diagnosis of plaque-type psoriasis for at least 6 months prior to first study agent administration, who had moderate to severe disease, and with PASI ≥ 12, PGA ≥ 3 and BSA involvement of at least 10%, and who were candidates for systemic or phototherapy, were eligible for the study. 43% and 11% of subjects had prior exposure to conventional systemic or biologic therapies respectively.

The primary endpoint was the proportion of patients who achieve a PGA score of cleared (0) or minimal (1) at Week 12. Secondary endpoints included PASI 75 at Week12. Subjects who discontinued study treatment due to lack of efficacy, an adverse event (AE) of psoriasis, or who

started a protocol-prohibited medication/therapy prior to Week 12 were considered as non-responders. Subject with missing PGA or PASI scores at Week 12 were considered non-responders. For the Week 12 analysis, any subject receiving moderate to high potency topical steroid preparations were considered as non-responders.

The study population were predominantly Caucasian (89%) and 51% were female. Median body weight was 61.6 kg, 56% had a body weight of between 50 and 70 kg and the median body mass index was 22.15 kg/m^2. Median psoriasis duration was 5.29 years with median age at onset of 10 years. The majority of subjects (70.0%) were 15 to 17 years of age, with a median age of 15.5 years. 57% of subjects had ≥ 20% body surface area affected with psoriasis and median PASI score was 18.8 (range 12-51), and 62% and 38% of subjects had PGA scores of moderate and marked/severe respectively.

Table 18: Summary of patient demographics for CADMUS

Study #	Study design	Dosage, route of administration and duration	Study subjects (n)	Mean age (Range)	Sex

Number of evaluable subjects at Week 52	n=34	n=35
Number of patients who achieved a PGA score of cleared (0) or minimal (1)	20 (58.8%)	20 (57.1%)
PASI 75 responders	23 (67.6%)	28 (80%)

Plaque Psoriasis – Pediatrics (6 to 11 years of age): CADMUS Jr

The efficacy of Finlius was studied in 44 pediatric patients 6 to 11 years of age with moderate to severe plaque psoriasis in an open label, single-arm, multicenter, Phase 3 study. Patients were treated with the recommended dose of Finlius (n=44) based on body weight measured at each visit (see 4.2 Recommended Dose and Dosage Adjustment) by subcutaneous injection at Weeks 0 and 4 followed by every 12 week (q12w) dosing.

The primary endpoint was the proportion of patients who achieved a PGA score of cleared (0) or minimal (1) at Week 12. Secondary endpoints included PASI 75 at Week 12.

Patients with moderate to severe plaque-type psoriasis with or without psoriatic arthritis (PsA) for at least 6 months prior to first administration of study drug, with widespread lesions defined by PASI ≥ 12, PGA ≥ 3, and involved BSA ≥ 10% and who were candidates for phototherapy or systemic treatment or had psoriasis poorly controlled with topical therapy after an adequate dose and duration of therapy were eligible for the study. Approximately 18% and 5% of patients had prior exposure to conventional systemic or biologic therapies respectively. The study population was predominantly Caucasian (91%) and 61% were female. The median body weight was 33.3 kg, with 91% of patients having a body weight less than 60 kg. The median body mass index was 18.0 kg/m^2. The median psoriasis duration was 2.9 years and the median age of onset of disease was 6.0 years. The median percent of BSA affected with psoriasis was 18.0%. The median PASI score was 16.1. The median age was 9.5 years, with 50.0% of subjects < 10 years of age. All ages across the age range (≥ 6 to < 12 year of age) were represented in the study population. The majority of subjects (65.9%) had PGA scores of moderate and 34.1% had a PGA score of marked or severe. The median PASI score was 16.1 and the median Children's Dermatology Life Quality Index (CDLQI) score was 7.0 (representing a moderate impact of psoriasis on quality of life).

Study #	Study design	Dosage, route of administration and duration	Study subjects (n)	Mean age (Range)	Sex
CNTO1275 PSO3013 (CADMUS Jr)	Open-label single arm, multicentre	Fixed doses (weight based): Standard dosage (0.75 mg/kg for patients < 60 kg, 45 mg for patients ≥ 60 kg to ≤ 100 kg and 90 mg for patients > 100 kg) Weeks 0, 4 then q12w (N=36)	N=44	8.9 (6,11)	M=17 (39%) F=27 (61%)

Study Results

At Week 12, patients treated with Finlius showed clinically meaningful improvements in their psoriasis. All patients were followed for efficacy for up to 52 weeks following first administration Finlius. The PGA scores and PASI 75 responders at Week 12 and 52 are summarized in Table 22. Efficacy measured by PGA score of 0 or 1 was observed as early as the first post-baseline visit at Week 4 and increased through Week 16 and then remained relatively stable through Week 52. Improvements in PGA and PASI were maintained through Week 52.

Table 22: Summary of Primary and Secondary End-points at Week 12 and 52: CADMUS Jr. (Age 6-11)

PASI 75 responders	37 (84.1%)	36 (87.8%)

Psoriatic Arthritis

The safety and efficacy of Finlius was assessed in two multicenter, randomized, double-blind, placebo-controlled, phase 3 studies, PSUMMIT I and PSUMMIT II, in patients with active psoriatic arthritis. Patients were randomized to receive treatment with either Finlius 45 mg, 90 mg, or placebo subcutaneous injections at Weeks 0 and 4 followed by every 12 week (q12w) dosing. The primary endpoint in these studies was the reduction in the signs and symptoms of psoriatic arthritis (PsA) as measured by the percentage of ACR 20 responders at Week 24. Secondary endpoints included change from baseline in Disability Index of the Health Assessment Questionnaire (HAQ-DI), PASI 75, ACR 50, ACR 70 and change from baseline in total radiographic scores of the hands and feet at Week 24. Efficacy data were collected and analyzed through Week 52.

These studies included 927 adult patients (≥18 years) who had active psoriatic arthritis (≥5 swollen joints and ≥5 tender joints, despite disease modifying antirheumatic (DMARD) and/or nonsteroidal anti-inflammatory (NSAID) therapy. Methotrexate (MTX) use was allowed during the studies but was not mandatory. Approximately 50% of patients continued on stable doses of MTX (≤25 mg/week). In PSUMMIT I and PSUMMIT II, 80% and 86% of the patients, respectively, had been previously treated with DMARDs.

In PSUMMIT I patients, who had been previously treated with anti-TNFα therapy, prior to the first study dose, were excluded. In PSUMMIT II, the majority of patients (58%, n=180) had been previously treated with one or more an anti-TNFα agent(s) for at least 8 weeks (14 weeks with infliximab) or had discontinued anti-TNFα for intolerance at any time. Among the patients who had been previously treated with an anti-TNFα agent, over 70% had discontinued their anti-TNFα treatment for lack of efficacy or intolerance.

Patients with each subtype of psoriatic arthritis were enrolled, including polyarticular arthritis with no evidence of rheumatoid nodules (39%, N=362), spondylitis with peripheral arthritis (28%, N=255), asymmetric peripheral arthritis (21%, N=193), distal interphalangeal (DIP) arthritis (12%, N=112) and arthritis mutilans (0.5%, N=5). Over 70% and 40% of the patients in both studies had enthesitis and dactylitis at baseline, respectively.

Table 23: Summary of patient demographics in PSUMMIT I and PSUMMIT II

Study Results

Reduction in Signs and Symptoms

In both studies, a significantly greater proportion of patients achieved ACR 20 and ACR 50 responses at Week 24 in the Finlius 45 mg and 90 mg groups compared to placebo (Table 24). In PSUMMIT I, a significantly greater proportion of patients and in PSUMMIT II, a numerically

greater proportion of patients (p=NS) achieved ACR 70 responses in the Finlius 45 mg and 90 mg groups compared to placebo (Table 24).

Table 24: Number of patients who achieved ACR 20, ACR 50 and ACR 70 at Week 24

[a] p<0.001, [b] p<0.05, [c] p= NS

An ACR 20 response (Felson et al, 1995) was defined as:

1. ≥ 20% improvement in swollen joint count (66 joints) and tender joint count (68 joints); and
2. ≥ 20 % improvement in ≥3 of the following 5 assessments:

- Patient's assessment of pain [Visual Analog Scale (VAS)]
- Patient's global assessment of disease activity (VAS)
- Physician's global assessment of disease activity (VAS)
- Patient's assessment of physical function as measured by the HAQ-DI
- CRP

ACR 50 or ACR 70 are similarly defined.

The time course for ACR 20 response rates during the first 24 weeks in both studies for patients receiving Finlius or placebo are summarized in Figure 2. During the controlled phase of the studies, ACR 20 responses showed improvement at the first assessment (Week 4) and maximum responses were achieved at Week 20 or 24. ACR 20, 50 and 70 responses continued to improve or were maintained through Week 52.

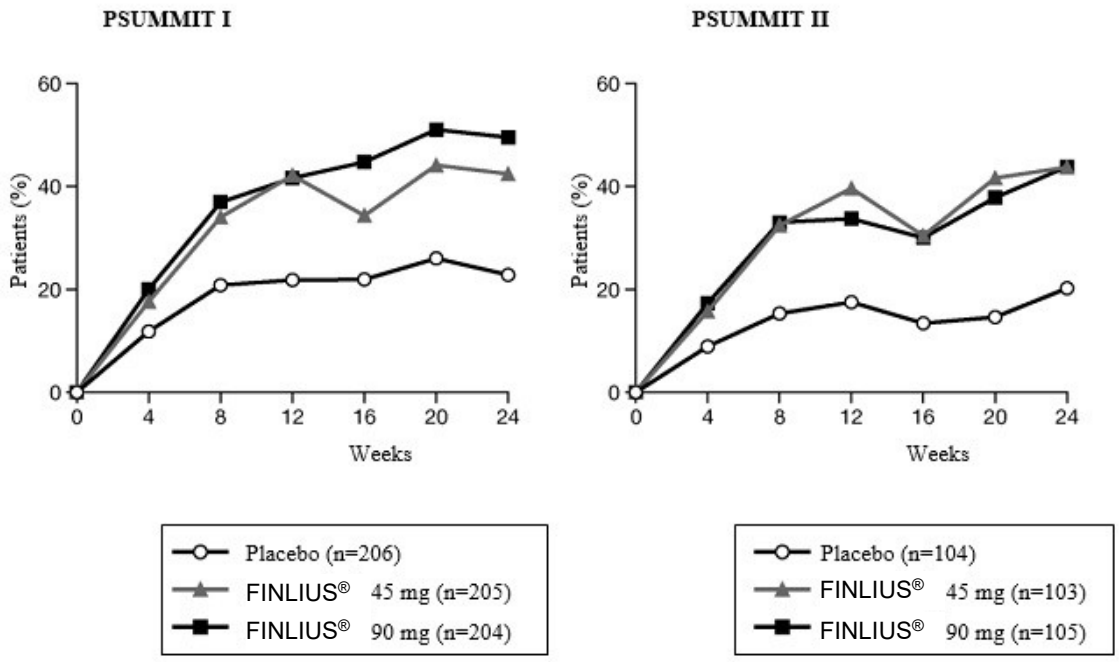

Figure 2: Percent of patients achieving ACR 20 response through Week 24

In PSUMMIT I, of 205 subjects randomized to Finlius 45 mg, 153 continued the same dose and were available for evaluation at Week 52. Among those, ACR 20, 50 and 70 responses were achieved by 99 (64.7%), 57 (37.3%) and 34 (22.2%) subjects respectively. Of 204 subjects randomized to Finlius 90 mg, 185 were available for evaluation at Week 52. Among those, ACR 20, 50 and 70 responses were achieved by 120 (64.9%), 74 (40%) and 41 (22.2%) subjects respectively.

In PSUMMIT II, of 103 subjects randomized to Finlius 45 mg, 68 continued the same dose and were available for evaluation at Week 52. Among those, ACR 20, 50, and 70 responses were achieved by 41 (60.3%), 23 (33.8%) and 11 (16.2%) subjects respectively. Of 105 subjects randomized to Finlius 90 mg, 83 were available for evaluation at Week 52. Among those, ACR 20, 50 and 70 responses were achieved by 49 (59%), 26 (31.3%) and 17 (20.5%) subjects respectively.

Additionally, within each weight group (≤100 kg and >100 kg), ACR 20, ACR 50 and ACR 70 responses were consistently higher in the Finlius 45 mg and 90 mg groups than in the placebo group (Table 25).

[h] CRP: (Normal Range 0.0-1.0 mg/dL)

In PSUMMIT I and PSUMMIT II, the proportion of subjects with good or moderate Disease Activity Index Score 28 using C-reactive protein (DAS28-CRP) responses and the proportion of subjects in DAS28 remission were greater in both Finlius-treated groups compared to placebo at Week 24. DAS28-CRP responses were maintained through Week 52.

Methotrexate Use

The proportion of patients achieving ACR responses were consistently greater in patients treated with Finlius than those treated with placebo regardless of concomitant MTX use. Responses observed in the Finlius groups were similar in patients receiving or not receiving concomitant MTX. ACR responses were maintained through Week 52 (Table 27).

ACR 70	2 (4%)	4 (7%)	3 (6%)	1 (2%)	3 (6%)	6 (11%)

Prior Anti-TNFα therapy

PSUMMIT II evaluated 180 patients who were previously treated with one or more anti-TNFα agents for at least 8 weeks (14 weeks with infliximab), or had documented intolerance of anti-TNFα therapy at any time in the past.

Among patients previously treated with anti-TNFα agents, a greater proportion of Finlius-treated patients in both the 45 mg and 90 mg groups achieved an ACR 20 response at Week 24 compared to placebo (37% and 34% vs 15%). ACR 20 response was generally maintained through Week 52.

Enthesitis and Dactylitis

For patients with enthesitis and/or dactylitis at baseline, in PSUMMIT I, greater improvement in enthesitis and dactylitis score was observed in the Finlius 45 mg and 90 mg groups compared to placebo. For enthesitis, the median improvement was 43% and 50% for each dose group respectively, compared to 0% for placebo. For dactylitis, the median improvement was 75% and

71% for each dose group respectively, compared to 0% for placebo. In PSUMMIT II, a greater improvement was observed in enthesitis score in both doses and in dactylitis score in the 90 mg group compared with the placebo group. In both studies, improvement in enthesitis score and dactylitis score were maintained at Week 52.

Psoriasis Skin Response

In PSUMMIT I and PSUMMIT II, the proportion of patients with psoriasis involvement of ≥3% BSA at baseline who achieved a ≥75% improvement in the PASI assessment at Week 24 was significantly greater in the Finlius 45 mg and 90 mg groups compared with the placebo group (Table 28). In both studies the proportion of patients achieving the PASI 75 response was maintained through Week 52.

Table 28: Number of patients who achieved PASI 75, PASI 90 and PASI 100 responses at Week 24

	PSUMMIT I			PSUMMIT II		
		Finlius [a]			Finlius [a]	
	Placebo (N=206)	45 mg (N=205)	90 mg (N=204)	Placebo (N= 104)	45 mg (N=103)	90 mg (N=105)
Patients with ≥ 3% BSA psoriasis skin involvement at baseline	146	145	149	80	80	81

PASI 100	2 (1%)	29 (20%)	41 (28%)	1 (1%)	13 (16%)	17 (21%)

[a] p<0.001 for 45 mg or 90 mg comparison with placebo.

Additionally, within each weight group (≤ 100 kg and > 100 kg), PASI 75, 90 and 100 responses were consistently higher in the Finlius 45 mg and 90 mg groups than in the placebo group. In both studies, the proportion of patients who achieved a PASI 75 response at Week 24 was consistently higher in Finlius 45 mg and 90 mg groups compared with placebo regardless of concomitant MTX use. PASI 75 responses were maintained through Week 52.

Radiographic Response

Structural damage in both hands and feet was assessed by readers unaware of treatment group and order of visits, and expressed as change in total van der Heijde-Sharp score (vdH-S score), modified for PsA by addition of hand distal interphalangeal (DIP) joints, compared to baseline. A pre-specified major secondary endpoint based on the integrated analysis combining data from 927 subjects in both PSUMMIT I and PSUMMIT II was performed. At Week 24, based on this integrated analysis, patients treated with either Finlius 45 mg (n=308, mean change in total vdH-S score=0.40) or 90 mg (n=309, mean change=0.39) demonstrated significantly less progression of structural damage compared to placebo (n=310, mean change=0.97), p<0.05 and p<0.001 for the 45 mg and 90 mg groups, respectively. This effect was demonstrated irrespective of concomitant MTX use, and was maintained through Week 52.

Similar results were seen in PSUMMIT I for patients treated with either Finlius 45 mg (n=205, mean change=0.28) or 90 mg (n=204, mean change=0.17) compared to placebo (n=206, mean

change=1.20). In PSUMMIT II, the mean change was 0.66 for 45 mg (n=103), 0.81 for 90 mg (n=105) and 0.51 for placebo (n=104).

Physical Function and Health-Related Quality of Life

In PSUMMIT I and PSUMMIT II, physical function and health-related quality of life were assessed using the Disability Index of the Health Assessment Questionnaire (HAQ-DI) and the SF-36 health survey.

Patients treated with Finlius 45 mg and 90 mg showed significant improvement in physical function as assessed by the HAQ-DI at Week 24 as compared to placebo in both PSUMMIT I and PSUMMIT II. The proportion of patients achieving a clinically meaningful ≥ 0.3 improvement in HAQ-DI score from baseline at Week 24 was also significantly greater in the Finlius groups when compared with placebo. Improvement was observed at the first assessment (Week 4), reached maximum at Week 12 and was maintained through Week 24. In both studies the improvement in HAQ-DI at Week 24 was consistently greater in the Finlius 45 mg and 90 mg groups compared with placebo regardless of concomitant MTX use. Improvement in HAQ-DI score from baseline was maintained at Week 52 (Table 29).

Table 29: Improvement in physical function as measured by HAQ-DI at Week 24

[a] p<0.001

[b] p<0.01

[c] Includes all randomized subjects

* achieving a ≥ 0.3 improvement from baseline

In PSUMMIT I, of 205 subjects randomized to Finlius 45 mg, 153 continued the same dose and were available for evaluation at Week 52. Among those, the HAQ-DI response was achieved by 83 (54.2%) subjects. Of 204 subjects randomized to Finlius 90 mg, 185 were available for evaluation at Week 52. Among those, HAQ-DI response was achieved by 102 (55.1%) subjects.

In PSUMMIT II, of 103 subjects randomized to Finlius 45 mg, 68 continued the same dose and were available for evaluation at Week 52. Among those, the HAQ-DI response was achieved by

29 (42.6%) subjects. Of 105 subjects randomized to Finlius 90 mg, 83 were available for evaluation at Week 52. Among those, HAQ-DI response was achieved by 44 (53%) subjects.

In both PSUMMIT I and PSUMMIT II, at Week 24, the change from baseline in the SF-36 physical component summary (PCS) scores was significantly greater in the Finlius 45 mg and 90 mg groups compared with the placebo group. In both studies, the change from baseline in the SF-36 mental component summary (MCS) scores at Week 24 was greater in both Finlius groups compared with the placebo group. In both studies, the change from baseline in the SF-36 PCS and MCS scores was maintained at Week 52.

The DLQI was assessed by comparing the change in DLQI scores from baseline for those patients with ≥3% BSA at baseline. In both studies at Week 24, there was a greater improvement from baseline in DLQI scores in both the Finlius 45 mg and 90 mg groups as compared with placebo and the improvement was maintained at Week 52.

In PSUMMIT II, the improvement from baseline in Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) scores at Week 24 was greater in the Finlius 45 mg and 90 mg groups compared with the placebo group. Similarly, the percentage of patients with clinically meaningful improvement in fatigue from baseline (4 points in FACIT-F) was greater in both dose groups compared with the placebo group. The change from baseline in the FACIT-F scores was maintained at Week 52.

Crohn's Disease

The safety and efficacy of Finlius/Finlius I.V. were evaluated in three randomized, double-blind, placebo-controlled clinical trials in adult patients with moderately to severely active Crohn's disease (Crohn's Disease Activity Index [CDAI] score of 220 to 450). The clinical development program consisted of two 8-week IV induction studies (UNITI-1 and UNITI-2) followed by a 44-week subcutaneous randomized withdrawal maintenance study (IM-UNITI) representing 52 weeks of therapy (Table 30).

Table 30: Summary of controlled clinical trials supporting safety and efficacy in patients with CD

Study #	Study Design	Dosage: Route of Administration and Duration	Study Subjects (n)	Median Age (Range)	Sex
UNITI-1 (Induction)	Multicentre, double-blinded, randomized, placebo-controlled	IV administration at Week 0	741	36 (18, 71)	M: 317, 43 F: 424, 57

Induction Studies: UNITI-1 and UNITI-2

UNITI-1 and UNITI-2 studies included 1409 (UNITI-1, n=769; UNITI-2 n=640) patients. Of these subjects, 1368 (UNITI-1, n=741; UNITI-2, n=627) patients are included in the final efficacy analysis. In both studies, patients were permitted to concomitantly receive oral 5-ASA compounds, immunomodulators, corticosteroids, and/or antibiotics. Patients were randomized to receive a single IV administration of either 130 mg Finlius I.V., or approximately 6 mg/kg Finlius I.V. designed as a tiered dose based on patient body weight (Table 3) or placebo at Week 0.

The primary endpoint for UNITI-1 and UNITI-2 was clinical response defined as a reduction in CDAI score of ≥ 100 points or CDAI score < 150 (for subjects with a baseline CDAI score of ≥ 220 to ≤ 248) at Week 6. Secondary endpoints included clinical remission (CDAI score of < 150 points) at Week 8, clinical response at Week 8, 70-point response at Week 3, and 70-point response at Week 6. Efficacy data were collected and analyzed through Week 8 for both studies.

In UNITI-1, patients had failed or were intolerant to prior anti-TNFα therapy. At baseline, patients had a median (min, max) baseline CDAI score of 317 (198, 515), and approximately 46% (n=340) patients were receiving corticosteroids (including budesonide) and 31.4% of patients were receiving immunomodulators. Approximately 48% had failed 1 prior anti-TNFα therapy and 52% had failed 2 or 3 prior anti-TNFα therapies (40.8% and 10.4%, respectively). In this study, 29.1% patients had an inadequate initial response (primary non-responders), 69.4%

responded but subsequently lost response (secondary non-responders), and 36.4% were intolerant to anti-TNFα therapies.

Patients in UNITI-2 had failed at least one conventional therapy (corticosteroids or immunomodulators) and were either anti-TNFα naïve (68.6%) or had previously received but not failed anti-TNFα therapy (31.4%). At baseline, patients had a median (min, max) baseline CDAI score of 292.5 (198, 608), and approximately 40% patients were receiving corticosteroids (including budesonide) and 35% patients were receiving immunomodulators.

Maintenance: IM-UNITI

The maintenance study (IM-UNITI) evaluated 388 patients who achieved clinical response (≥ 100 point reduction in CDAI score or CDAI score < 150 [patients with a baseline CDAI score of ≥ 220 to ≤ 248]) at Week 8 of induction with Finlius I.V. in UNITI-1 or UNITI-2 out of 397 patients who were randomized into the study. Of those, approximately 60% of the patients entered the maintenance study in remission. Patients were randomized to receive a subcutaneous maintenance regimen of either 90 mg Finlius every 8 weeks, 90 mg Finlius every 12 weeks or placebo for an additional 44 weeks. Patients who completed the maintenance study through Week 44 were eligible to continue treatment through Week 272. An efficacy analysis was performed at Week 92 of the extension study.

Concomitant doses of oral 5-ASA compounds, immunomodulators, corticosteroids and antibiotics were permitted. At baseline, 45.6% of patients were receiving corticosteroids and 35% of patients were receiving immunomodulators. Corticosteroids were tapered at the start of the maintenance trial and during the trial in patients in clinical response. The primary endpoint was clinical remission (CDAI < 150) at Week 44 of maintenance. Secondary endpoints assessed at Week 44 of maintenance included clinical response, clinical remission among Finlius treated patients in clinical remission after induction, corticosteroid-free remission, and clinical remission in the subset of patients who were refractory or intolerant to anti-TNFα treatment. Other endpoints and planned analyses included evaluations for inflammatory markers, such as C-reactive protein and fecal calprotectin, fistula response, and patient reported outcomes.

Study Results

Induction of Response and Remission

In these induction studies, efficacy was higher and better sustained in the tiered dose group compared to the 130 mg dose group, and tiered dosing is therefore the recommended IV induction dose. In both UNITI-1 and UNITI-2, a significantly greater proportion of patients were in clinical response at Week 6 and remission at Week 8 in the group treated with Finlius I.V. compared to placebo (Table 31, Figure 3). Clinical response and remission were observed as early as Week 3 in Finlius I.V. treated patients and continued to improve through Week 8 (Figure 3)

Table 31: Induction of Clinical Response and Remission in UNITI-1* and UNITI 2**

Clinical remission is defined as CDAI score < 150; Clinical response is defined as reduction in CDAI score by at least 100 points or being in clinical remission (for subjects with a baseline CDAI score of ≥ 220 to ≤ 248).

70 point response is defined as reduction in CDAI score by at least 70 points

* Patients who failed or were intolerant to anti-TNF α agents

** Patients who failed or were intolerant to corticosteroids or immunomodulators. Patients may have previously received but not failed an anti- TNF α agent or were never treated with an anti-TNF α agent

[a] Based on a Cochran-Mantel-Haenszel chi-square test, stratified by study region (Asia, Eastern Europe, or Rest of World), CDAI score (≤ 300 or > 300), and initial response to TNF antagonist therapy (yes or no; CRD3001 only)

[b] To control the overall Type I error rate at the 0.05 significance level, the endpoints were tested in the hierarchical order presented in this table

[c] Subjects who had a prohibited Crohn's disease-related surgery, had prohibited concomitant medication changes, or had insufficient data to determine response and remission status were considered to not be in response or remission.

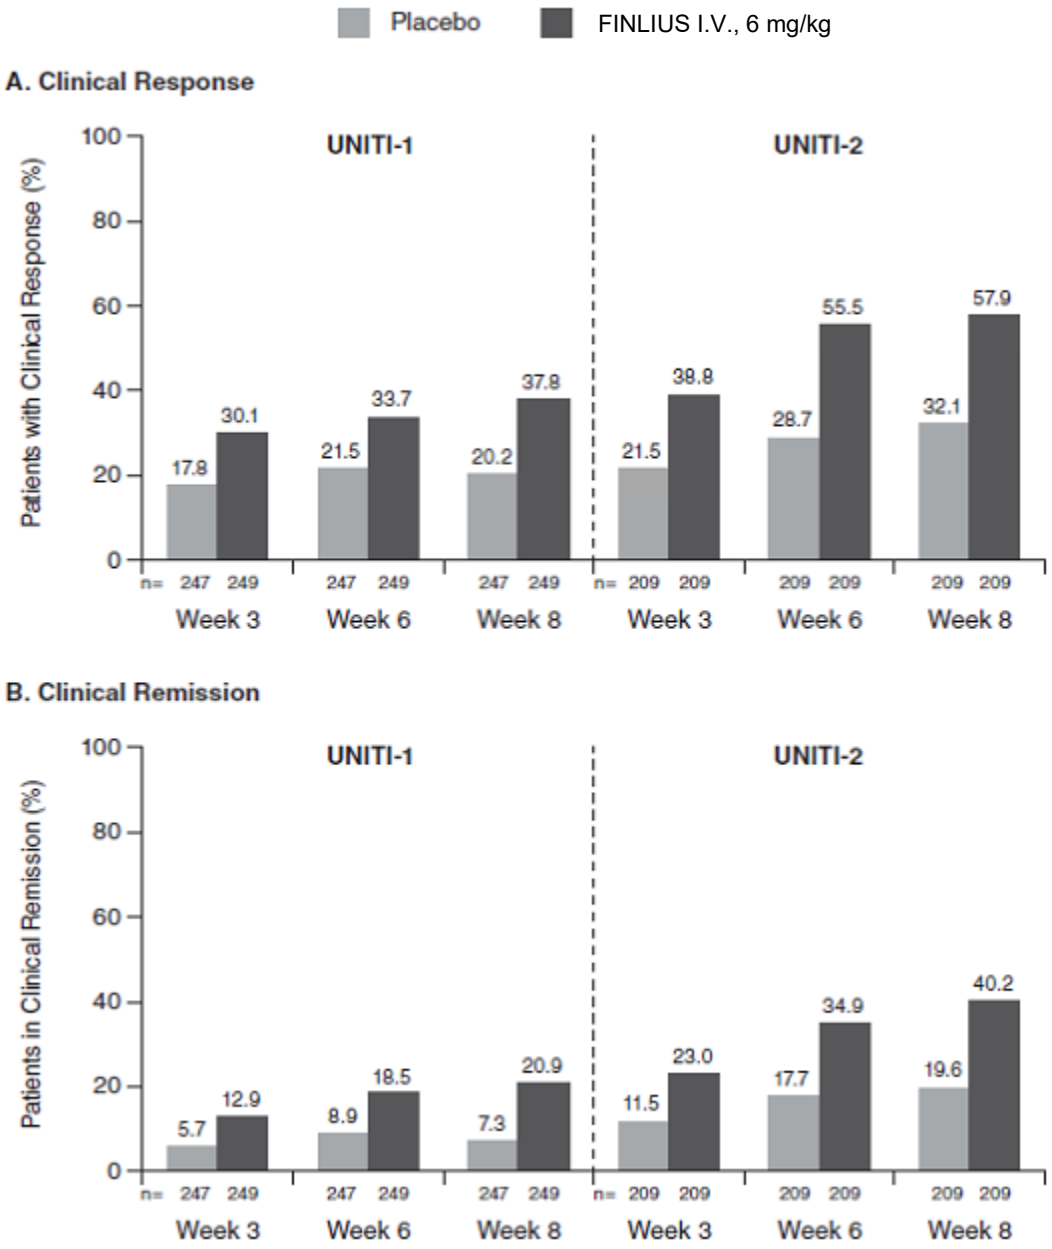

Figure 3: Proportion of Finlius I.V. treated patients in clinical response (A) and remission (B) through Week 8 in UNITI-1 and UNITI-2 studies

Anti-TNFα Naïve group

UNITI-2 evaluated 246 patients (69% of the UNITI-2 population) who have had an inadequate response, loss of response or were intolerant to conventional therapy but have never been exposed to anti-TNF α agents. Among this subgroup of patients, 56.3% of Finlius I.V.-treated patients and 32.6% of patients treated with placebo achieved a clinical response at Week 6.

Maintenance of Response and Remission

In IM-UNITI, significantly higher proportions of patients maintained clinical remission and response in the Finlius treated groups as compared to placebo at Week 44 of maintenance (Table 32).

Table 32: Maintenance of Clinical Response and Remission in IM-UNITI (Week 44; 52 weeks from initiation of the induction dose)

	Placebo* N=131†	90 mg Finlius every 12 weeks N=129†	Treatment difference, 95% CI and p-value	90 mg Finlius every 8 weeks N=128†	Treatment difference, 95% CI and p-value
Clinical Remission [c] n (%)	47 (35.9%)	63 (48.8%)	13% (1%, 25%) p = 0.040 [ab]	68 (53.1%)	17% (5%, 29%) p = 0.005 [ab]
Clinical Response [c] n (%)	58 (44.4%)	75 (58.1%)	14% (2%, 26%) p = 0.033 [ab]	76 (59.4%)	15% (3%, 27%) p = 0.018 [ab]
Clinical Remission in patients in remission at the start of maintenance therapy [c] n/N (%)	36/79 (45.6%)	44/7[illegible] (56.4[illegible]	10.8% (-5%, 26%) p = 0.189 [abd]	52/78 (66.7%)	21% (6%, 36%) p = 0.007 [ab]

Clinical remission is defined as CDAI score < 150; Clinical response is defined as reduction in CDAI of at least 100 points or being in clinical remission (for subjects with a baseline CDAI score of ≥ 220 to ≤ 248)

* The placebo group consisted of patients who were in response to Finlius and were randomized to receive placebo at the start of maintenance therapy.

† Patients who achieved a clinical response to Finlius I.V. at start of maintenance therapy

[a] Based on a Cochran-Mantel-Haenszel chi-square test, stratified by clinical remission status at Week 0 (yes or no), Finlius I.V. induction dose (130 mg or tiered doses approximating ustekinumab 6 mg/kg), and induction study (UNITI-1 or UNITI-2)

[b] To control the overall Type I error rate at the 0.05 significance level, the endpoints were tested in the hierarchical order presented in this table for the q8w dosing regimen and then in the same hierarchical order for the q12w regimen.

[c] Subjects who had a prohibited Crohn's disease-related surgery, had a loss of response, had prohibited concomitant medication changes, discontinued study agent due to lack of efficacy or due to an adverse event indicated to be of worsening Crohn's disease, or had insufficient data to determine the response and remission status were considered to not be in response or remission.

[d] p-value is not significant at the 0.05 level of significance.

Patients who were not in clinical response 8 weeks after Finlius I.V. induction were not included in the primary efficacy analysis for IM-UNITI; however, these patients were eligible to receive a 90 mg subcutaneous injection of Finlius upon entry in IM-UNITI. Of these patients, 236/467 (50.5%) achieved clinical response eight weeks later and were followed for the duration of the study.

In IM-UNITI, patients who did not maintain response to Finlius when treated every 12 weeks were allowed to increase the frequency of dosing and receive Finlius every 8 weeks. In these patients (n=29), 55% and 41% achieved clinical response and clinical remission respectively 16 weeks after dosing frequency adjustment.

Of the randomized patients in clinical remission at Week 44 who entered the long-term extension, 57/69 (83%) and 52/65 (80%) of patients who received Finlius q8w and q12w respectively were in clinical remission at Week 92. Of the randomized patients in clinical response at Week 44 who entered the long-term extension, 64/78 (82%) and 69/82 (84%) of patients who received Finlius q8w and q12w respectively were in clinical response at Week 92.

Corticosteroid Use in Maintenance
At Week 44, 47% and 43% of patients who received Finlius q8w and q12w respectively were corticosteroid-free and in clinical remission compared to 30% of patients in the placebo group. In the subgroup of patients who were on corticosteroids at baseline, 30% of subjects in the Finlius treated groups were corticosteroid free and in clinical remission at Week 44, compared to 15% in the placebo group.

Endoscopic Assessment of Bowel Mucosa
Mucosal disease of the bowel (ileum and colon) was evaluated in 252 patients with baseline endoscopic disease activity in a substudy. At Week 8, after a single IV induction dose, the reduction in Simplified Endoscopic Activity Score for Crohn's Disease (SES-CD) was -3.0 in patients treated with Finlius I.V. (n=83), compared -0.7 in patients treated with placebo (n=97).

Other Health Related Outcomes
Health-related quality of life was assessed by the disease specific instrument, Inflammatory Bowel Disease Questionnaire (IBDQ). In UNITI-1, the median change from baseline in the IBDQ score at Week 8 was 20 in the group treated with Finlius I.V. compared with 7 in the placebo group. The corresponding changes in UNITI-2 are 29 in the group treated with Finlius I.V. compared with 9 in the placebo group. At Week 44, the median change in IBDQ scores from Week 0 of the maintenance study was -2.5 in the Finlius q12w dose group and -2.0 in the Finlius q8w dose group, compared with -14.5 in the placebo group.

Ulcerative Colitis

The safety and efficacy of Finlius/Finlius I.V. was assessed in two randomized, double-blind, placebo-controlled, clinical trials in adult patients with moderately to severely active ulcerative colitis who had an inadequate response to or failed to tolerate a biologic (i.e., anti-TNFα agent and/or vedolizumab) or conventional therapy. An 8-week IV induction study (UNIFI-I) was followed by a 44-week subcutaneous randomized withdrawal maintenance study (UNIFI-M) representing a total 52 weeks of therapy (Table 33).

Disease assessment was based on the Mayo score, which ranged from 0 to 12 and has four subscores that were each scored from 0 (normal) to 3 (most severe): stool frequency, rectal bleeding, findings of endoscopy, and physician global assessment. Moderately to severely active ulcerative colitis was defined at baseline (Week 0) as Mayo score of 6 to 12, including a Mayo endoscopy subscore ≥ 2. The endoscopy subscore was assessed by the investigator (ie,

local endoscopist) during the endoscopy procedure and by a central reader who reviewed a video of the endoscopy. Patients were permitted to receive concomitant aminosalicylates, immunomodulators, and/or corticosteroids and 90% of patients continued to receive at least one of these medications.

Table 33: Summary of controlled clinical trials supporting safety and efficacy in patients with UC

Study #	Study Design	Dosage: Route of Administration and Duration	Study Subjects (n)	Median Age (Range)	Sex
UNIFI-I (Induction)	Multicentre, double-blinded, randomized, placebo-controlled	IV administration at Week 0	961	41 (18-84)	M: 582, 61 F: 379, 39
		Placebo	319		
		Finlius I.V. 130 mg	320		
		Finlius I.V. ~6 mg/kg [a]	322		
UNIFI-M (Maintenance)	Multicentre, double-blinded, placebo-controlled randomized-withdrawal	SC administration at Week 0 [b], and then q8w or q12w for 44 weeks	523	40 (18-84)	M: 297, 57 F: 226, 43
		Placebo	175		
		Finlius 90 mg q8w	176		
		Finlius 90 mg q12w	172		

[a] tiered weight-based dose approximating 6 mg/kg (see 4 DOSAGE AND ADMINISTRATION)
[b] 8 weeks following the intravenous dose of Finlius I.V.

Induction Study: UNIFI-I

In the induction study (UNIFI-I), 961 patients were randomized to receive a single intravenous administration of 130 mg Finlius I.V., or approximately 6 mg/kg Finlius I.V. designed as a tiered dose based on patient body weight (Table 3) or placebo at Week 0. Randomization was stratified by biologic failure status (yes/no) and region (Eastern Europe, Asia, or rest of world).

The primary endpoint was clinical remission (defined as a Mayo score ≤ 2 points, with no individual sub-score > 1) at Week 8. The secondary endpoints included: clinical response (≥ 3 points and 30% decrease in Mayo score with either a decrease from baseline in the rectal bleeding subscore ≥ 1 or a rectal bleeding subscore of 0 or 1), improvement of endoscopic appearance of the mucosa (Mayo endoscopy subscore of 0 or 1), and histo-endoscopic mucosal healing (defined as combined improvement of endoscopic appearance of the mucosa and histologic healing of the colon tissue [neutrophil infiltration in < 5% of crypts, no crypt destruction, and no erosions, ulcerations, or granulation tissue]).

Patients enrolled in UNIFI-I had to have failed conventional therapy (corticosteroids or immunomodulators) or at least one biologic (an anti-TNFα agent and/or integrin antagonist). Of the total population, 49% of patients had failed conventional therapy but not a biologic (of which 94% were biologic-naïve) and 51% of patients had failed or were intolerant to a biologic. Approximately 50% of patients had failed at least 1 prior anti-TNFα agent (of which 48% were primary non-responders) and 17% had failed both an anti-TNFα agent and an integrin antagonist. At induction baseline and throughout the study, approximately 52% of patients were

receiving oral corticosteroid, 28% of patients were receiving immunomodulators (AZA, 6-MP, or MTX) and 69% of patients were receiving aminosalicylates.

In UNIFI-I, a significantly greater proportion of patients were in clinical remission and response and achieved improvement of endoscopic appearance of the mucosa and histo-endoscopic mucosal healing in the Finlius I.V. treated group (at the recommended dose of approximately 6 mg/kg) compared to placebo at Week 8 (Table 34).

Table 34: Results for Efficacy Endpoints at Week 8 in UNIFI-I*

	Placebo N = 319	**Finlius I.V. ~6 mg/kg N = 322**	**Treatment difference, 97.5% CI**

With prior biologic failure	6/161 (3.7%)	22/166 (13.3%)	

* Subjects who had insufficient data or had a prohibited change in concomitant UC medication or an ostomy or colectomy prior to the Week 8 visit were considered not to have achieved the respective endpoints

[ɾ] An additional 7 patients on placebo and 9 patients on Finlius (~6 mg/kg) had been exposed to, but had not failed, biologics.

** Clinical remission is defined as Mayo score ≤2 points, with no individual subscore > 1

‡ Improvement of endoscopic appearance of the mucosa is defined as a Mayo endoscopic sub-score of 0 or 1 determined by central review of the endoscopy

§ Clinical response was defined as a decrease from baseline in the Mayo score by ≥ 30% and ≥ 3 points, with either a decrease from baseline in the rectal bleeding subscore ≥ 1 or a rectal bleeding subscore of 0 or 1

† Histo-endoscopic mucosal healing is defined as combined improvement of endoscopic appearance of the mucosa (Mayo endoscopy sub-score of 0 or 1) and histologic healing of the colon tissue (neutrophil infiltration in < 5% of crypts, no crypt destruction, and no erosions, ulcerations, or granulation tissue)

[a] $p < 0.001$; p-value is based on a Cochran-Mantel-Haenszel (CMH) chi-square test stratified by biologic failure status and region. Type I error rate is controlled at the 0.025 significance level based on a pre-defined hierarchical testing procedure

Maintenance Study: UNIFI-M

The maintenance study (UNIFI-M), evaluated 523 patients who achieved clinical response at Week 8 following the administration of Finlius I.V. in UNIFI-I. These patients were randomized to

receive a subcutaneous maintenance regimen of either 90 mg Finlius every 8 weeks, 90 mg Finlius every 12 weeks or placebo for 44 weeks. Randomization was stratified by clinical remission status at maintenance baseline (yes/no), oral corticosteroid use at maintenance baseline (yes/no), and induction treatment.

The primary endpoint was the proportion of patients in clinical remission at Week 44. Secondary endpoints included the proportion of patients maintaining clinical response through Week 44, the proportion of patients with improvement of endoscopic appearance of the mucosa at Week 44, the proportion of patients with corticosteroid-free clinical remission at Week 44, and the proportion of patients maintaining clinical remission through Week 44 in patients who achieved clinical remission 8 weeks after induction. Patients who completed the maintenance study through Week 44 were eligible to continue treatment through Week 96.

Results of the primary and secondary endpoints at Week 44 in patients treated with Finlius at the recommended dosage (90 mg every 8 weeks) compared to the placebo are shown in Table 35.

Table 35: Results for Efficacy Endpoints at Week 44 in UNIFI-M (52 weeks from initiation of the induction dose)*

	Placebo¥ N = 175	Finlius 90 mg every 8 Weeks N = 176	Treatment difference, 95% CI
Clinical Remission**	42 (24.0%)	77 (43.8%)	19.7 (10.3, 29.0)[ab]

Biologic-naïve[+]	9/25 (36.0%)	12/16 (75.0%)	
With prior biologic failure	8/20 (40.0%)	10/20 (50.0%)	

* Subjects who had insufficient data or had a prohibited change in UC medication, an ostomy or colectomy, or used a rescue medication after clinical flare, or discontinued study agent due to lack of therapeutic effect or due to an AE of worsening of UC prior to the Week 44 visit were considered not to have achieved the respective endpoints

¥ The placebo group consisted of patients who were in response to Finlius I.V. and were randomized to receive placebo at the start of maintenance therapy

[+] An additional 3 patients on placebo and 6 patients on q8w Finlius had been exposed to, but had not failed, biologics

** Clinical remission is defined as Mayo score ≤2 points, with no individual subscore > 1

[§] Clinical response was defined as a decrease from baseline in the Mayo score by ≥ 30% and ≥ 3 points, with either a decrease from baseline in the rectal bleeding subscore ≥ 1 or a rectal bleeding subscore of 0 or 1

[†] Improvement of endoscopic appearance of the mucosa is defined as a Mayo endoscopic sub-score of ≤ 1 point

[a] $p < 0.001$

[b] p value is based on a Cochran-Mantel-Haenszel (CMH) chi-square test stratified by clinical remission status at maintenance baseline (not applicable to the last endpoint) and induction treatment. Type I error rate is controlled based on a pre-defined hierarchical testing procedure

Week 16 Responders to Finlius I.V Induction

Patients who were not in clinical response 8 weeks after Finlius I.V. induction were not included in the primary efficacy analysis for UNIFI-M; however, these patients were eligible to receive a 90 mg subcutaneous injection of Finlius at Week 8. Of the 101 patients who received the

recommended induction dose of 6 mg/kg who were not in clinical response at Week 8, 59/101 (58.4%) achieved clinical response at Week 16 of UNIFI-I and received Finlius every 8 weeks during UNIFI-M. Patients who did not achieve clinical response at Week 16 were discontinued from the study.

Histo-Endoscopic Mucosal Healing
The proportion of patients achieving histo-endoscopic mucosal healing at Week 44 was 79/176 (44.9%) in patients receiving Finlius every 8 weeks compared to 41/175 (23.4%) in patients treated with placebo. The relationship of histo-endoscopic mucosal healing at Week 44 to progression of disease or long-term outcomes was not evaluated.

15 MICROBIOLOGY

No microbiological information is required for this drug product.

16 NON-CLINICAL TOXICOLOGY

The toxicity of ustekinumab was specifically evaluated in a number of nonclinical studies. An overview of these toxicity studies is provided in Table 36.

General Toxicology: In repeated-dose toxicity studies in cynomolgus monkeys, ustekinumab was well tolerated following IV doses up to 45 mg/kg/week for up to 1 month and following twice-weekly SC doses up to 45 mg/kg for 6 months. There were no ustekinumab-related findings in the immunotoxicity and cardiovascular safety pharmacology evaluations. In histopathology evaluations there were no preneoplastic changes observed. No evidence of ustekinumab-related local intolerance was observed in examinations of subcutaneous injection sites in a local tolerance study and in the chronic subcutaneous toxicity study.

The 45 mg/kg dose is approximately 45-fold higher than the highest equivalent dose intended to be administered to patients with psoriasis (based on administration of a 90 mg SC dose to a 90 kg patient) and the average C_{max} value observed following the last SC 45 mg/kg dose in the 6-month chronic toxicity study in cynomolgus monkeys was approximately 118-fold higher than the median C_{max} value of ustekinumab observed following 4 weekly 90 mg SC doses in psoriasis patients.

Carcinogenicity
The carcinogenic potential has not been evaluated.

Genotoxicity
The genotoxic potential has not been evaluated.

Reproductive and Developmental Toxicology: Three developmental toxicity studies were conducted in cynomolgus monkeys. No ustekinumab-related maternal toxicity, abortions, still-births, embryotoxicity, developmental delays, malformations or birth defects were observed at doses up to 45 mg/kg following weekly or twice weekly administration of ustekinumab via the IV

or SC routes, respectively. In neonates born from pregnant monkeys treated with ustekinumab, no adverse effects on growth or functional development were observed and no deficits were observed in immunotoxicity evaluations. In a male fertility study in cynomolgus monkeys, no ustekinumab-related effects on mating behaviour, sperm parameters, or serum concentrations of male hormones were observed following twice weekly subcutaneous administration of ustekinumab at doses up to 45 mg/kg.

A female fertility toxicity study was conducted in mice using an analogous antibody that binds to and inhibits IL-12 and IL-23 activity in mice. Twice weekly subcutaneous administration of the anti-mouse IL-12/23 antibody was well tolerated at doses up to 50 mg/kg and no adverse effects on female fertility parameters were observed.

Table 36: Non-Clinical Toxicology Studies with ustekinumab

Study	Species/ Strain	Route	Duration of Dosing	Doses (mg/kg)	Results
Repeat-Dose Toxicity					
Subchronic toxicity	Monkey/ Cynomolgus	IV	1 month	9, 45 weekly	No treatment-related signs of toxicity.
Subchronic toxicity	Monkey/ Cynomolgus	IV	1 month	9, 45 weekly	No treatment-related signs of toxicity.
Chronic toxicity	Monkey/ Cynomolgus	SC	6 months	22.5, 45 twice weekly	No treatment-related signs of toxicity. No preneoplastic changes observed on histopathology.
Reproductive and Developmental Toxicity					
Embryofetal Development	Monkey/ Cynomolgus	IV	Pregnant females: gestation day 20 to gestation day 50	9, 45 weekly	No maternal or fetal abnormalities were observed.
Embryofetal Development	Monkey/ Cynomolgus	SC	Pregnant females: gestation day 20 – gestation day 51	22.5, 45 twice weekly	A statistically significant increase in maternal 17ß-estradiol levels relative to the control group was observed on days 80 and 100 of gestation in the 22.5 and 45 mg/kg groups. However, foetal 17ß-estradiol levels were not affected, and there were no other treatment-related maternal or foetal

Study	Species/ Strain	Route	Duration of Dosing	Doses (mg/kg)	Results
					abnormalities observed at either dose level.
Male fertility	Monkey/ Cynomolgus	SC	Males: 13 weeks	22.5, 45 twice weekly	No changes in fertility parameters observed.
Female fertility	Mouse/Crl CD-1	SC	Beginning 15 days before cohabitation and continuing through day 7 of presumed gestation	25, 50 twice weekly	No maternal or fetal abnormalities were observed.
Embryofetal and pre- and postnatal development	Monkey/ Cynomolgus	SC	Pregnant females: gestation day 20 – postpartum day 30	22.5, 45 twice weekly	No effects on pregnancy or delivery; or morphological, functional and immunological developmental parameters of offspring. Ustekinumab was detected in the milk of lactating monkeys.
Local Tolerance					
Pharmacokinetics and injection site irritation	Monkey/ Cynomolgus	SC	18 days	45 twice weekly	Minimal signs of local irritation at injection sites were observed, with no associated histopathologic findings.
Other Toxicity Studies					
Tissue cross-reactivity	Human Tissues	In vitro		1.13,11.3, 113, 225 mg/mL	No binding to nontarget normal human tissues.
Tissue cross-reactivity	Human Tissues	In vitro		1.13,11.3, 113, 225 mg/mL	No binding to nontarget normal human tissues
Asthma model	Monkey/ Cynomolgus	IV	Single dose	9, 45	No exacerbation of pulmonary function or cellular responses.

Study	Species/ Strain	Route	Duration of Dosing	Doses (mg/kg)	Results
Asthma model	Monkey/ Cynomolgus	IV	1 week	45	No exacerbation of pulmonary function or cellular responses.

PATIENT MEDICATION INFORMATION

READ THIS FOR SAFE AND EFFECTIVE USE OF YOUR MEDICINE

Pr **FINLIUS®**
fin li' us'
ustekinumab injection
Solution for Subcutaneous Injection

Read this carefully before you start taking **Finlius** and each time you get a refill. This leaflet is a summary and will not tell you everything about this drug. Talk to your healthcare professional about your medical condition and treatment and ask if there is any new information about **Finlius**.

What is Finlius used for?

- **Adults with Plaque Psoriasis**

Finlius is a prescription medicine that is approved for adults with moderate to severe plaque psoriasis that is chronic (doesn't go away).

- **Children 6 to 17 years of age with Plaque Psoriasis**

Finlius is a prescription medicine that is approved for children and adolescent patients 6 to 17 years of age with moderate to severe plaque psoriasis that is chronic (doesn't go away) and who have had an inadequate response to other treatments.

- **Adults with Psoriatic Arthritis**

Finlius is a prescription medicine that is approved for adults with active psoriatic arthritis.

Psoriatic arthritis is an inflammatory disease of the joints, usually accompanied by psoriasis. If you have active psoriatic arthritis, you will be given Finlius by injection under the skin, alone or in combination with methotrexate, to reduce signs and symptoms of your arthritis, help improve your ability to perform daily activities (such as dressing, walking and climbing stairs) and improve your psoriasis.

- **Adults with Crohn's disease or ulcerative colitis**

Finlius/Finlius I.V. is a prescription medicine that is approved for adults with moderately to severely active Crohn's disease and for adults with moderately to severely active ulcerative colitis. For patients with Crohn's disease or ulcerative colitis, the first dose, Finlius I.V., is given by an intravenous infusion, through a needle placed in a vein. Subsequent doses of Finlius are given by injection under the skin.

Crohn's disease (CD) is a chronic inflammatory bowel disorder. Ulcerative colitis is an inflammatory disease of the colon. If you have moderately to severely active Crohn's disease or ulcerative colitis that has not responded to other medications and you are an adult, you may be given Finlius/Finlius I.V. to help relieve your symptoms and keep the disease under control. Finlius/Finlius I.V. may help reduce or stop the use of your corticosteroid medication.

How does Finlius work?

Finlius blocks the action of two proteins in your body called interleukin 12 (IL-12) and interleukin 23 (IL-23). In people with psoriasis, psoriatic arthritis, Crohn's disease or ulcerative colitis, their immune system may attack parts of their body and that attack uses IL-12 and IL-23. Ustekinumab can block the IL-12 and IL-23 from causing the immune system to attack the skin, nails, joints or the digestive tract.

What are the ingredients in Finlius?

Medicinal ingredients: ustekinumab

Non-medicinal ingredients: L-histidine, L-histidine monohydrochloride monohydrate, polysorbate 80, sucrose and water for injection. No preservatives are present.

Finlius comes in the following dosage forms:

Pre-filled Syringe:
- 45 mg / 0.5 mL
- 90 mg / 1.0 mL

Single-use Vial:
- 45 mg / 0.5 mL

Do not use Finlius if:

- you have a serious infection such as tuberculosis, infections caused by bacteria or fungi, and bacterial infections that have spread throughout the body (sepsis).
- you have had an allergic reaction to Finlius, Finlius I.V., or any of the other ingredients in Finlius. See below for a complete list of ingredients in Finlius.
- after the expiration date on the label.
- the seal is broken.
- the liquid is discoloured, cloudy or you can see other particulate matter floating in it.
- you know or think that it may have been exposed to extreme temperatures (such as accidentally frozen or heated).

You should not receive a live vaccine while taking Finlius.

If you used Finlius while pregnant, tell your baby's healthcare professional about your Finlius use before the baby receives any vaccine, including live vaccines, such as the BCG vaccine (used to prevent tuberculosis), rotavirus vaccine, or any other live vaccines.

Always keep medicine out of the reach of children.

To help avoid side effects and ensure proper use, talk to your healthcare professional before you take Finlius. Talk about any health conditions or problems you may have, including if you:

- ever had an allergic reaction to Finlius or Finlius I.V. Ask your healthcare professional if you are not sure.
- have any kind of infection even if it is very minor.
- have an infection that won't go away or a history of infection that keeps coming back.
- have burning when you urinate.
- have diarrhea or abdominal pain.
- have had TB (tuberculosis), notice blood in your phlegm or if you have recently been near anyone who might have TB.
- have or have had any type of cancer.
- have any new or changing skin lesions.
- have recently received or are scheduled to receive a vaccine. Tell your healthcare professional if anyone in your house needs a vaccine. The viruses in some vaccines can spread to people with a weakened immune system and can cause serious problems.
- are receiving or have received “allergy shots”, especially for serious allergic reactions.
- are pregnant, think you might be pregnant, planning to become pregnant, or breastfeeding. Finlius may pass into your breast milk in small amounts.

Contact your healthcare professional immediately:

- if you develop signs of a serious allergic reaction such as skin rash, swollen face, lips, mouth, throat, wheezing, dizziness, trouble swallowing or breathing.
- if you develop headache, vision problems, seizures or change in mental status (for example, confusion).

The needle cover on the pre-filled syringe contains dry natural rubber (a form of latex). This may cause allergic reactions in people who are sensitive to latex. Tell your healthcare professional if you have ever had an allergic reaction to latex and developed any allergic reaction to Finlius injection.

There is limited experience with Finlius in pregnant and breastfeeding women. If you are a woman of childbearing potential, you should use effective contraception when starting Finlius and talk to your healthcare professional before planning to conceive a child. If you are pregnant or breastfeeding, your healthcare professional will help you decide whether or not to use Finlius.

Tell your healthcare professional about all the medicines you take, including any drugs, vitamins, minerals, natural supplements or alternative medicines.

Know the medicines you take. Keep a list of your medicines and show them to your healthcare professionals when you get a new medicine.

The following may interact with Finlius:

- Finlius may change the way the body responds to live vaccines.
- Finlius may interact with other medications that decrease the activity of the immune system.

Your healthcare professional will assess your health before each treatment.

If you have questions, ask your health care provider.

How to take Finlius:

<u>Instructions for injecting Finlius under the skin yourself</u>:

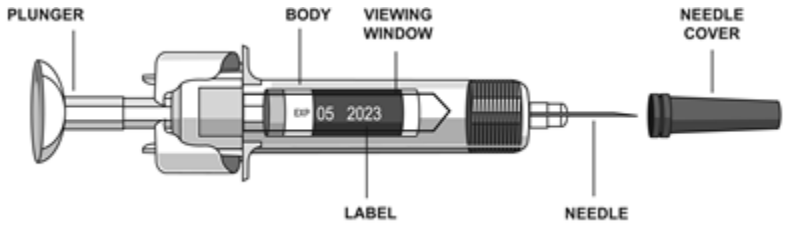
Finlius may be injected by your healthcare provider. In children 6 to 17 years of age, it is recommended that all doses of Finlius be administered by a health care provider. However, your healthcare professional may decide that it is right for you or your caregiver to learn how to inject Finlius under the skin (subcutaneously) yourself. Before you self-inject Finlius, you must be trained by a healthcare professional. If you or your caregiver have not been trained, please contact your healthcare provider to schedule a training session. Call your healthcare provider if you have any questions about giving yourself an injection. Finlius is not to be mixed with other liquids for injection.

INSTRUCTIONS FOR INJECTING FINLIUS USING A PRE-FILLED SYRINGE

To reduce the risk of accidental needle sticks to users, each pre-filled syringe is equipped with a needle guard that is automatically activated to cover the needle after complete delivery of the syringe content.

Do not shake Finlius at any time. Prolonged vigorous shaking may damage the product. If the product has been shaken vigorously, don't use it.

1: PREPARING FOR PRE-FILLED SYRINGE USE



Take the Syringe out of the Refrigerator
If your dose amount is 90 mg and you receive two 45 mg packages, you need to give a second injection right after the first. Choose a different site for the second injection. Children who weigh 60 kg or more may use the prefilled syringe.

Check Expiration Date
Open the box and remove the pre-filled syringe. Check the expiration date on the pre-filled syringe and the label of the box. If the expiration date has passed, or if the pre-filled syringe has been kept at room temperature up to 30°C for longer than 30 days or if the pre-filled syringe has been stored above 30°C, DO NOT use the pre-filled syringe.

Assemble Additional Supplies
Assemble the additional supplies you will need for your injection. These include an antiseptic wipe, a cotton ball or gauze, and a sharps container for syringe disposal.

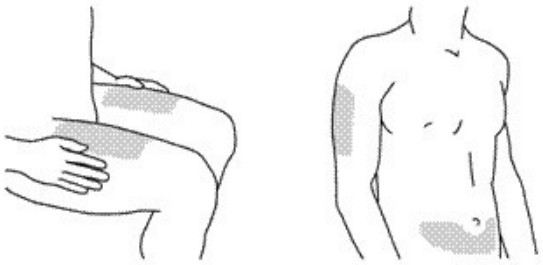
Check Solution in Syringe
Hold the pre-filled syringe with the covered needle pointing upward. Make sure the syringe is not damaged. Look at the solution or liquid in the syringe to make sure that it is clear to slightly opalescent and colorless to slightly yellow. DO NOT use if it is frozen, discolored, cloudy or contains particles and contact your healthcare provider for assistance.

DO NOT remove the needle cover from the pre-filled syringe.

DO NOT pull back on the plunger head at any time.

2: CHOOSING AND PREPARING THE INJECTION SITE

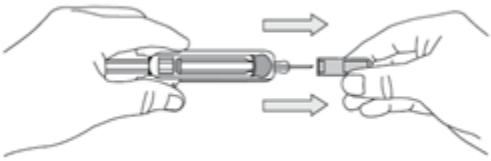
Choose the Injection Site*
Good sites are the top of the thigh and around the tummy (abdomen) but about 2 inches away from the belly button (navel). Avoid, if possible, skin involved with psoriasis. If your caregiver is giving you the injection, they may use the upper arms or buttocks as well.



*Areas in gray are recommended injection sites.

Prepare the Injection Site
Thoroughly wash your hands with soap and warm water. Wipe the injection site with an antiseptic wipe. DO NOT touch this area again before giving the injection.

3: INJECTING THE MEDICATION



Remove the Needle Cover
When you are ready to inject, pick up the pre-filled syringe, hold the body of the syringe with one hand and pull the needle cover straight off. Throw the needle cover into the trash. You may notice a small air bubble in the pre-filled syringe. You do not need to remove the air bubble. You may also see a drop of liquid at the end of the needle – this is normal. Do not touch the needle or allow it to touch any surface.

Note: The needle cover should NOT be removed until you are ready to inject the dose. Do not use syringe if it is dropped without the needle cover in place. If you drop the syringe without the needle cover in place, please contact your healthcare provider for assistance.

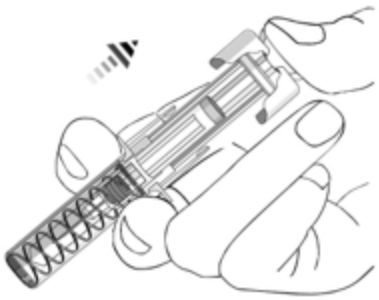
Inject the Medication
Gently pinch the cleaned skin between your thumb and index finger. Don’t squeeze it.

Push the syringe needle into the pinched skin.

Push the plunger with your thumb as far as it will go to inject all of the liquid.

Push it slowly and evenly, keeping the skin pinched.

When the plunger meets the end of the syringe barrel, and all of the medication has been injected, release the pinched skin and gently remove the needle. Following complete injection, the needle guard will automatically extend over the needle and lock as you take your hand off the plunger.



4: AFTER THE INJECTION

Dispose of the Empty Syringe
Immediately dispose of the empty syringe into the sharps container. For your safety and health and for the safety of others, needles and syringes **must NEVER** be re-used. Dispose of sharps container according to your local regulations.
Use a Cotton Ball or Gauze
There may be a small amount of blood or liquid at the injection site, which is normal. You can press a cotton ball or gauze over the injection site and hold for 10 seconds. Do not rub the injection site. You may cover the injection site with a small adhesive bandage, if necessary.

INSTRUCTIONS FOR INJECTING FINLIUS FROM A 45 mg/0.5 mL VIAL

Do not shake Finlius Solution for Subcutaneous Injection at any time. Prolonged vigorous shaking may damage the product. If the product has been shaken vigorously, don't use it. Finlius is not to be mixed with other liquids for injection.

1: CHECK VIAL(S) AND ASSEMBLE MATERIALS

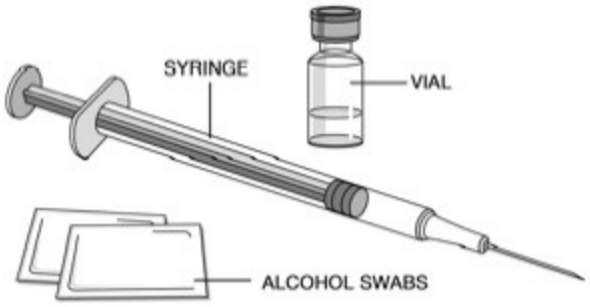
Take the Vial(s) out of the Refrigerator
If your dose is 45 mg you will receive one 45 mg vial. If your dose is 90 mg, you will receive two 45 mg vials. If you receive two 45 mg vials for a 90 mg dose, you will need to give yourself two injections one right after the other. Use a new needle and syringe. Choose a different site for the second injection.

Children weighing less than 60 kg require a dose lower than 45 mg. Make sure you know the proper amount (volume) and type of syringe needed for dosing. If you don't know the amount or type of syringe needed, contact your healthcare provider for further instructions.

Check Expiration Date
Open the box and remove the vial. Check the expiration date on the vial and the label of the box. If the expiration date has passed, don't use it.

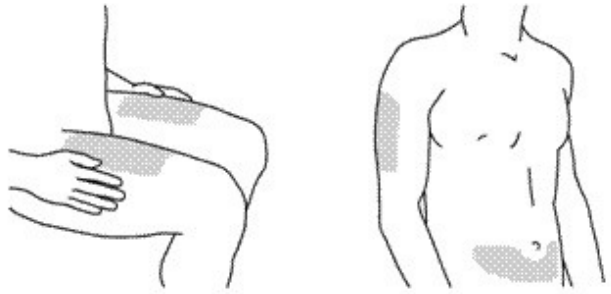
Check Solution in Vial
Make sure the vial is not damaged. Look at the solution or liquid in the vial to make sure that it is clear to slightly opalescent and colorless to slightly yellow. **DO NOT** use if it is frozen, discolored, cloudy or contains particles and contact your healthcare provider for assistance.

Assemble Additional Supplies
Assemble the additional supplies you will need for your injection. These include an antiseptic wipe, a cotton ball or gauze, and a sharps container for syringe disposal.



2: CHOOSING AND PREPARING THE INJECTION SITE

Choose the Injection Site*
Good sites are the top of the thigh and around the tummy (abdomen) but about 2 inches away from the belly button (navel). Avoid, if possible, skin involved with psoriasis. If your caregiver is giving you the injection, they may use the upper arms or buttocks as well.

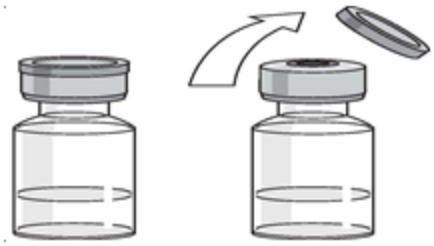


*Areas in gray are recommended injection sites.

Prepare the Injection site
Thoroughly wash your hands with soap and warm water. Wipe the injection site with an antiseptic wipe. DO NOT touch this area again before giving the injection.

3: PREPARING THE DOSE

Remove the cap from the top of the vial but do not remove the stopper. Clean the stopper with an antiseptic wipe.



Remove the needle cover from the syringe. Do not touch the needle or allow the needle to touch anything.

Put the vial on a flat surface and push the syringe needle through the rubber stopper.

Turn the vial and the syringe upside down.
For adults and children 6 to 17 years of age, who weigh 60 kg or more, pull on the syringe plunger to fill the syringe with the entire amount (volume) of liquid prescribed by your healthcare provider. It is important that the needle is always in the liquid in order to prevent air bubbles from forming in the syringe.

For children 6 years of age or older who weigh less than 60 kg, the amount of liquid prescribed by your health care provider may be less than 0.5 mL. Your health care provider will recommend how much liquid is needed.

Remove the needle from the vial
Hold the syringe with the needle pointing up to see if it has any air bubbles inside. If there are air bubbles tap the side gently until the air bubbles go to the top of the syringe and press the plunger until all of the air (but none of the liquid) has been removed. Do not lay the syringe down or allow the needle to touch anything.

4: INJECTING THE MEDICATION

Gently pinch the cleaned skin between your thumb and index finger. Don't squeeze it.

Push the syringe needle into the pinched skin.

Push the plunger with your thumb as far as it will go to inject all of the liquid. Push it slowly and evenly, keeping the skin gently pinched.

When the plunger is pushed as far as it will go, take out the needle and let go of the skin.

Press an antiseptic wipe over the injection site for a few seconds after the injection.

Dispose the Empty Syringe and Vial(s)
Discard any unused portion of Finlius in accordance with local requirements. Immediately dispose of the empty syringe into the sharps container. For your safety and health and for the safety of others, vials, needles and syringes must NEVER be re-used. Dispose of sharps container according to your local regulations. Empty vials, antiseptic wipes, and other supplies can be placed in your regular trash.

Use a Cotton Ball or Gauze
There may be a small amount of blood or liquid at the injection site, which is normal. You can press a cotton ball or gauze over the injection site and hold for 10 seconds. Do not rub the injection site. You may cover the injection site with a small adhesive bandage, if necessary.

Usual dose:

Psoriasis
For treatment of psoriasis, Finlius is given by injection under the skin.

Adults:
The recommended dose of Finlius is 45 mg at Weeks 0 and 4 then every 12 weeks thereafter. Your healthcare professional may consider treating you as often as every 8 weeks.

90 mg may be used in patients with a body weight greater than 100 kg.

Pediatric Psoriasis (6 years of age or older):
The recommended dose of Finlius based on body weight (as shown below) is given at Week 0 and 4, and then every 12 weeks thereafter.

Weight	Recommended dose of Finlius	Dosage Form
< 60kg	0.75 mg/kg*	Vial
≥ 60 to ≤ 100 kg	45 mg	Pre-filled syringe, vial
> 100 kg	90 mg	Pre-filled syringe

* For patients with body weight < 60 kg, use the vial presentation only. To calculate the volume of injection (mL) for patients < 60 kg, use the following formula: body weight (kg) x 0.0083 (mL/kg). The calculated volume should be rounded to the nearest 0.01 mL and administered using a 1 mL graduated syringe. The calculated volume of injection per kg body weight at time of dosing are also provided in table below. A 45 mg vial is available for pediatric patients who need to receive less than the full 45 mg dose.

Injection volumes of Finlius for pediatric psoriasis patients < 60 kg		
Body weight at time of dosing (kg)	**Dose (mg)**	**Volume of injection (mL)**

55	41.3	0.46
56	42.0	0.46
57	42.8	0.47
58	43.5	0.48
59	44.3	0.49

In children 6 to 17 of age with psoriasis, it is recommended that Finlius be administered by a health care provider. If your healthcare professional determines that it is appropriate, your caregiver or you may be able to administer Finlius to yourself, after proper training in injection technique using the right type of syringe and the amount (volume) to be injected (see the "**Instructions for injecting Finlius under the skin yourself**".)

Psoriatic Arthritis
For treatment of psoriatic arthritis, Finlius is given by injection under the skin. The recommended dose of Finlius is 45 mg at Weeks 0 and 4 then every 12 weeks thereafter. Alternatively, 90 mg may be used in patients with a body weight greater than 100 kg.

Crohn's disease and ulcerative colitis
For treatment of Crohn's disease or ulcerative colitis, the recommended dose is a single intravenous dose of Finlius I.V. based on body weight (as shown below) followed by 90 mg Finlius given by injection under the skin (subcutaneous).

Weight	Recommended Dose of Finlius I.V.
≤ 55 kg	260 mg
> 55 kg to ≤ 85 kg	390 mg
> 85 kg	520 mg

The recommended dosing schedule for Crohn's disease and ulcerative colitis is as follows:

Treatment number	Time of treatment Route of administration
Treatment 1	Week 0 Intravenous infusion (Finlius I.V.)
Treatment 2	8 weeks after Treatment 1 Subcutaneous injection (Finlius)
Further treatment	Every 8 weeks* Subcutaneous injection (Finlius)

* your healthcare professional will decide whether the treatment interval between injections should be maintained at every 8 weeks or may be extended to every 12 weeks

The BioAdvance® Network has been established to facilitate the administration of Finlius. This network consists of clinics located across Canada that are staffed by qualified healthcare professionals specially trained in the administration of Finlius. Contact your healthcare professional if you have any questions.

Overdose:

Call your healthcare professional if you accidentally inject Finlius more frequently than instructed.

If you think you, or a person you are caring for, have taken too much Finlius, contact a healthcare professional, hospital emergency department, or regional poison control centre immediately, even if there are no symptoms.

Missed dose:

If you miss a dose, contact your healthcare provider for guidance.

What are possible side effects from using Finlius?

These are not all the possible side effects you may have when taking Finlius. If you have any side effects not listed here, tell your healthcare professional.

The most common side effects of Finlius are:

- Upper respiratory tract infections such as the common cold
- Infection of the nose and throat
- Dizziness
- Headache
- Sore throat
- Diarrhea
- Nausea
- Vomiting
- Itching
- Back pain
- Muscle aches
- Joint pain
- Feeling very tired
- Redness of the skin where the injection is given
- Pain where the injection is given
- Sinus infection

Finlius is a medicine that affects your immune system. It can increase your risk of getting serious side effects including:

Serious Infections

- Finlius may lower your ability to fight infections. Some infections could become serious and lead to hospitalization. If you have an infection or have any open cuts, tell your healthcare provider before you start using Finlius. If you get an infection, have any sign of an infection such as fever, feel very tired, cough, flu-like symptoms, or warm, red, or painful skin or sores on your body, tell your healthcare provider right away. These may be signs of infections such as chest infections, or skin infections or shingles that could have serious complications.
- Your healthcare professional will examine you for tuberculosis (TB) and perform a test to see if you have TB. If your healthcare professional feels that you are at risk for TB, you may be treated with medicine for TB before you begin treatment with Finlius and during treatment with Finlius.

Cancers

- Finlius may decrease the activity of your immune system, and increase the risk for certain types of cancer. Tell your healthcare professional if you notice any unusual changes to your skin or health status while receiving Finlius treatment.

Serious Skin Conditions

Shedding of skin – increase in redness and shedding of skin over a larger area of the body may be symptoms of erythrodermic psoriasis or exfoliative dermatitis, which are serious skin conditions. You should contact your healthcare professional immediately if you notice any of these signs.

Serious side effects and what to do about them			
Symptom / effect	**Talk to your healthcare professional**		**Stop taking drug and get immediate medical help**
	Only if severe	**In all cases**	
VERY COMMON (>10%)			
Infected nose, sinuses or throat (cold)	✓		
COMMON (≥1% and <10%)			
Sore throat, nasal congestion	✓		
Allergic reaction (skin rash)		✓	
UNCOMMON (≥0.1% and <1%)			
Cellulitis (skin infection)		✓	
Vaginal yeast infections	✓		
Tooth abscess/tooth infection		✓	
RARE (≥0.01% and <0.1%)			
Serious allergic reactions (e.g.: swollen face or trouble breathing; symptoms such as cough, shortness of breath, and fever may also be a sign of an allergic lung reaction)			✓
Increase in redness and shedding of skin		✓	

In general, the side effects of Finlius seen in children 6 to 17 years of age are similar to those in adults.

If you have a troublesome symptom or side effect that is not listed here or becomes bad enough to interfere with your daily activities, tell your healthcare professional.

Reporting Side Effects

You can report any suspected side effects associated with the use of health products to Health Canada by:

- Visiting the Web page on Adverse Reaction Reporting (https://www.canada.ca/en/health-canada/services/drugs-health-products/medeffect-canada.html) for information on how to report online, by mail or by fax; or
- Calling toll-free at 1-866-234-2345.

NOTE: Contact your health professional if you need information about how to manage your side effects. The Canada Vigilance Program does not provide medical advice.

Storage:

If you are using Finlius at home, it is important to store the product in your refrigerator at 2-8°C although not in the freezer compartment. Finlius should not be frozen. Keep the product in the original carton to protect from light until the time of use. Do not shake.

If needed, individual Finlius pre-filled syringes may also be stored at room temperature up to 30°C for a maximum single period of up to 30 days in the original carton with protection from light. Record the date when the pre-filled syringe is first removed from the refrigerator and the new expiry date on the carton in the spaces provided. The new expiry date must not exceed the original expiry date printed on the carton. Once a syringe has been stored at room temperature, it should not be returned to the refrigerator. Discard the syringe if not used within 30 days at room temperature storage.

Always keep medicine out of the reach and sight of children.

If you want more information about Finlius:

- Talk to your healthcare professional
- Find the full product monograph that is prepared for healthcare professionals and includes this Patient Medication Information by visiting the Health Canada website; https://www.canada.ca/en/health-canada/services/drugs-health-products/drugproducts/drug-product-database.html, the manufacturer's website www.janssen.com/canada or contact the manufacturer, Janssen Inc., at 1-800-567-3331, or 1-800-387-8781.

PATIENT MEDICATION INFORMATION

READ THIS FOR SAFE AND EFFECTIVE USE OF YOUR MEDICINE

Pr FINLIUS® I.V.
fin li' us'
ustekinumab for injection
Solution for Intravenous Infusion

Read this carefully before you start taking **Finlius I.V.** This leaflet is a summary and will not tell you everything about this drug. Talk to your healthcare professional about your medical condition and treatment and ask if there is any new information about **Finlius I.V.**

What is Finlius I.V. used for?

- **Adults with Crohn's disease or ulcerative colitis**

Finlius I.V./Finlius is a prescription medicine that is approved for adults with moderately to severely active Crohn's disease or adults with moderately to severely active ulcerative colitis. For patients with Crohn's disease or ulcerative colitis, the first dose, Finlius I.V., is given by an intravenous infusion, through a needle placed in a vein. Subsequent doses of Finlius are given by injection under the skin.

Crohn's disease (CD) is a chronic inflammatory bowel disorder. Ulcerative colitis is an inflammatory disease of the colon. If you have moderately to severely active Crohn's disease or ulcerative colitis that has not responded to other medications and you are an adult, you may be given Finlius I.V./Finlius to help relieve your symptoms and keep the disease under control. Finlius I.V./ Finlius may help reduce or stop the use of your corticosteroid medication.

How does Finlius I.V. work?

Finlius I.V. blocks the action of two proteins in your body called interleukin 12 (IL-12) and interleukin 23 (IL-23). In people with Crohn's disease and ulcerative colitis, their immune system may attack parts of their body and that attack uses IL-12 and IL-23. Ustekinumab can block the IL-12 and IL-23 from causing the immune system to attack the digestive tract.

What are the ingredients in Finlius I.V.?

Medicinal ingredients: ustekinumab

Non-medicinal ingredients: EDTA disodium salt dihydrate, L-histidine and L-histidine hydrochloride monohydrate, L-methionine, polysorbate 80 and sucrose. No preservatives are present.

Finlius I.V. comes in the following dosage forms:

Finlius I.V. is available as a sterile solution in single-use vials. Each vial contains 130 mg ustekinumab in 26 mL.

Do not use Finlius I.V. if:

- you have a serious infection such as tuberculosis, infections caused by bacteria or fungi, and bacterial infections that have spread throughout the body (sepsis).
- you have had an allergic reaction to Finlius I.V. or Finlius or any of the other ingredients in Finlius I.V. See below for a complete list of ingredients in Finlius I.V.
- after the expiration date on the label.
- the seal is broken.
- the liquid is discoloured, cloudy or you can see other particulate matter floating in it.
- you know or think that it may have been exposed to extreme temperatures (such as accidentally frozen or heated).

You should not receive a live vaccine when taking Finlius I.V.

If you used Finlius I.V. while pregnant, tell your baby's healthcare professional about your Finlius I.V. use before the baby receives any vaccine, including live vaccines, such as the BCG vaccine (used to prevent tuberculosis), rotavirus vaccine, or any other live vaccines.

To help avoid side effects and ensure proper use, talk to your healthcare professional before you take Finlius I.V. Talk about any health conditions or problems you may have, including if you:

- ever had an allergic reaction to Finlius I.V. or Finlius. Ask your healthcare professional if you are not sure.
- have any kind of infection even if it is very minor.
- have an infection that won't go away or a history of infection that keeps coming back.
- have burning when you urinate.
- have diarrhea or abdominal pain.
- have had TB (tuberculosis), notice blood in your phlegm or if you have recently been near anyone who might have TB.
- have or have had any type of cancer.
- have any new or changing skin lesions.
- have recently received or are scheduled to receive a vaccine. Tell your healthcare professional if anyone in your house needs a vaccine. The viruses in some vaccines can spread to people with a weakened immune system and can cause serious problems.
- are receiving or have received "allergy shots", especially for serious allergic reactions.
- are pregnant, think you might be pregnant, planning to become pregnant, or breastfeeding. Finlius I.V. may pass into your breast milk in small amounts.

Contact your healthcare professional immediately:

- if you develop signs of a serious allergic reaction such as skin rash, swollen face, lips, mouth, throat, wheezing, dizziness, trouble swallowing or breathing.
- if you develop headache, vision problems, seizures or change in mental status (for example, confusion).

There is limited experience with Finlius I.V./Finlius in pregnant and breastfeeding women. If you are a woman of childbearing potential, you should use effective contraception when starting Finlius I.V. and talk to your healthcare professional before planning to conceive a child. If you are pregnant or breastfeeding, your healthcare professional will help you decide whether or not to use Finlius I.V./Finlius.

Tell your healthcare professional about all the medicines you take, including any drugs, vitamins, minerals, natural supplements or alternative medicines.

Know the medicines you take. Keep a list of your medicines and show them to your healthcare professionals when you get a new medicine.

The following may interact with Finlius I.V.:

- Finlius I.V. may change the way the body responds to live vaccines.
- Finlius I.V. may interact with other medications that decrease the activity of the immune system.

Your healthcare professional will assess your health before each treatment.

If you have questions, ask your health care provider.

How to take Finlius I.V.:

Usual dose:

Crohn's disease and ulcerative colitis
For treatment of Crohn's disease or ulcerative colitis, the recommended dose is a single intravenous dose of Finlius I.V. based on body weight (as shown below) followed by 90 mg Finlius given by injection under the skin (subcutaneous).

Weight	Recommended Dose of Finlius I.V.
≤ 55 kg	260 mg
> 55 kg to ≤ 85 kg	390 mg
> 85 kg	520 mg

The recommended dosing schedule for Crohn's disease and ulcerative colitis is as follows:

Treatment number	Time of treatment Route of administration
Treatment 1	Week 0 Intravenous infusion (Finlius I.V.)
Treatment 2	8 weeks after Treatment 1 Subcutaneous injection (Finlius)
Further treatment	Every 8 weeks* Subcutaneous injection (Finlius)

* your healthcare professional will decide whether the treatment interval between injections should be maintained at every 8 weeks or may be extended to every 12 weeks

The initial dose of Finlius I.V. for intravenous infusion for Crohn's disease or ulcerative colitis will be given over a period of at least one hour.

The BioAdvance® Network has been established to facilitate the administration of Finlius I.V. This network consists of clinics located across Canada that are staffed by qualified healthcare professionals specially trained in the administration of Finlius I.V. infusions. Contact your healthcare professional if you have any questions.

Overdose:

In case of overdosage, it is recommended that the patient be monitored for any signs or symptoms of adverse effects and appropriate symptomatic treatment be instituted immediately.

If you think you, or a person you are caring for, have taken too much Finlius I.V., contact a healthcare professional, hospital emergency department, or regional poison control centre immediately, even if there are no symptoms.

What are possible side effects from using Finlius I.V.?

These are not all the possible side effects you may have when taking Finlius. If you have any side effects not listed here, tell your healthcare professional.

The most common side effects of Finlius I.V. are:

- Upper respiratory tract infections such as the common cold
- Infection of the nose and throat
- Dizziness
- Headache
- Sore throat
- Diarrhea
- Nausea
- Vomiting
- Itching
- Back pain
- Muscle aches
- Joint pain
- Feeling very tired
- Redness of the skin where the injection is given
- Pain where the injection is given
- Sinus infection

Finlius I.V. is a medicine that affects your immune system. It can increase your risk of getting serious side effects including:
Serious Infections

- Finlius I.V. may lower your ability to fight infections. Some infections could become serious and lead to hospitalization. If you have an infection or have any open cuts, tell your healthcare provider before you start using Finlius I.V. If you get an infection, have any sign of an infection such as fever, feel very tired, cough, flu-like symptoms, or warm, red, or painful skin or sores on your body, tell your healthcare provider right away. These may be signs of infections such as chest infections, or skin infections or shingles that could have serious complications.
- Your healthcare professional will examine you for tuberculosis (TB) and perform a test to see if you have TB. If your healthcare professional feels that you are at risk for TB, you may be treated with medicine for TB before you begin treatment with Finlius I.V.

Cancers

- Finlius I.V. may decrease the activity of your immune system, and increase the risk for certain types of cancer. Tell your healthcare professional if you notice any unusual changes to your skin or health status while receiving Finlius I.V. treatment.

Serious Skin Conditions

Shedding of skin – increase in redness and shedding of skin over a larger area of the body may be symptoms of erythrodermic psoriasis or exfoliative dermatitis, which are serious skin conditions. You should contact your healthcare professional immediately if you notice any of these signs.

If you have a troublesome symptom or side effect that is not listed here or becomes bad enough to interfere with your daily activities, tell your healthcare professional.

Reporting Side Effects

You can report any suspected side effects associated with the use of health products to Health Canada by:

- Visiting the Web page on Adverse Reaction Reporting (https://www.canada.ca/en/health-canada/services/drugs-health-products/medeffect-canada.html) for information on how to report online, by mail or by fax; or
- Calling toll-free at 1-866-234-2345.

NOTE: Contact your health professional if you need information about how to manage your side effects. The Canada Vigilance Program does not provide medical advice.

Storage:

Finlius I.V. must be stored in the original package in the refrigerator at 2-8°C (36-46°F) before use. Finlius I.V. should not be frozen. Keep the product in its original carton to protect from light until the time of use. Do not shake. It must be kept out of the reach and sight of children.

JAMP Pharma Group signs a landmark partnership agreement for the commercialization of five biosimilar medicines in Canada Français

NEWS PROVIDED BY
JAMP Pharma Corporation →
Jan 14, 2020, 06:00 ET

BOUCHERVILLE, QC, Jan. 14, 2020 /CNW Telbec/ - Canadian pharmaceutical company JAMP Pharma Group has signed an exclusive agreement with global speciality biopharmaceutical company Alvotech for the Canadian commercial rights to five biosimilars. The current market value of the branded sales for these five biosimilars is estimated to be exceeding $2 billion annually in Canada.

"We are thrilled with this partnership, as it will allow the JAMP Pharma Group to become a major player and partner in this market while continuing to expand our traditional generic portfolio, which should surpass 500 products by 2022. We now have six biosimilars in our short-term new product pipeline, and this will have a positive impact on both the company's future and patient access to these important medicines. The JAMP Pharma Group continues to be driven by our mission to offer more affordable options to Canadian patients."

- Louis Pilon, CEO of JAMP Pharma Group

Important news for the health sector in Canada

This partnership agreement will accelerate JAMP's unprecedented growth, reinforce its leadership position in the Canadian pharmaceutical industry and reaffirm its commitment to improving access to affordable medicines both for patients and the company's Canadian partners.

In concrete terms, the partnership allows for the creation of several new jobs and the expansion of the company's head office and laboratories in Boucherville.

"We are very excited to become a major biosimilar company in the Canadian market and look forward to collaborating with all stakeholders to make these new options available to Canadian patients as soon as possible. While the penetration rate of biosimilars remains very low, we are encouraged by the decision by officials in British Columbia and Alberta to transition all existing patients to one of the 18 biosimilars available in Canada."

- Bruno Mäder, Managing Director of Orimed Pharma and Head of Biosimilars for JAMP Pharma Group

A strategic partner of choice

Alvotech is a fully integrated specialty biopharmaceutical company focused exclusively on developing and manufacturing high-quality biosimilar medicines in their new state-of-the-art facility in Reykjavik, Iceland. Alvotech's pipeline includes biosimilar product candidates aimed at treating autoimmune, oncological and inflammatory conditions. The strategic partnership with JAMP Pharma Group extends Alvotech's fully integrated value chain from cell line development to commercial manufacturing. JAMP Pharma Group's existing commercial infrastructure and expertise will allow Canadian patients to benefit from safe and effective biosimilars as well as the JAMP Care™ patient support program, while providing significant cost savings to the healthcare system.

"Alvotech is proud to join forces with JAMP Pharma Group, a leading pharmaceutical company in Canada. We believe that our portfolio breadth and fully integrated development model will allow us to become a worldwide leader in this market."

- Anil Okay, Executive VP, Business Development for Alvotech

About JAMP Pharma Group

JAMP Pharma Group is a privately owned Canadian company headquartered in the Montréal area. Having sustained its phenomenal growth for more than 10 years, JAMP Pharma Group has a portfolio of more than 250 molecules and is the leader in product launches in the generic pharmaceutical industry in Canada based on Health Canada approvals from January to December 2019. The Group also has in excess of 160 products in its over-the-counter division with a diverse range of vitamin, supplement and natural product brands, as well as Orimed Pharma's prescription products.

Biosimilar medicines in Canada

A biosimilar is a biologic drug that is highly similar to a reference biologic drug already authorized for sale and no longer protected by a patent. Health Canada regulates biosimilars as new drugs under the Food and Drugs Act and Food and Drug Regulations. Biosimilars are approved for sale based on the same rigorous regulatory standards for quality, efficacy and safety as all other biologic drugs.

Biosimilars are not the same as generic drugs. Generic drugs are small, chemically synthesized molecules containing medicinal ingredients identical to their reference products. A biosimilar and its reference biologic drug can be shown to be highly similar, but not identical. This is because biologic drugs are often large and complex molecules and made from living cells rather than

chemicals. As a result, they are naturally variable.

Press release February 1, 2022

BIOJAMP: A Range of Biosimilars for a Seamless Approach

- BIOJAMP™, a division within the JAMP Pharma Group, is dedicated to improving and simplifying the complex world of biosimilars for patients and healthcare professionals.
- BIOJAMP™ and its JAMP CareTM patient support program offer a seamless experience for patients and healthcare professionals.
- BIOJAMP™ also aims to promote a range of products that will offer significant savings to provinces and insurers.
- BIOJAMP™ has acquired the commercial rights to a portfolio of biosimilar products which, in combination with the Group's other launches, will position it at the forefront of Canada's pharmaceutical industry.

BOUCHERVILLE, February 1, 2022 — The JAMP Pharma Group, a Montreal-based Canadian pharmaceutical company founded over 30 years ago, announced today the creation of its all-new division, BIOJAMP™. Its mission is to offer biosimilar products aimed at improving the experience of patients and healthcare professionals, at a considerably lower cost than the reference product. By creating this division, the JAMP Pharma Group is displaying its desire and potential to establish itself as a Canadian leader in the biosimilars market.

To achieve this ambitious objective in the biologics market, already a multi-billion-dollar industry in Canada, BIOJAMP™ intends to set itself apart from the competition by simplifying the complex process of transitioning to biosimilars. BIOJAMP™ and its JAMP Care™ support program will also make access to treatment more affordable, while providing a range of additional services without compromising the program's simplicity.

This new division within the JAMP Pharma Group will play an important role in the objectives of provinces and insurers looking to increase recurring annual savings through the use of biosimilars. The JAMP Pharma Group is focusing all its efforts on becoming a key actor and consolidating its mission: help build a future where everyone can live full and healthy lives.
A Vital Partnership

It is worth noting that the creation of BIOJAMP™ is primarily made possible through an exclusive agreement with Alvotech, a world-class biopharmaceutical company entirely specialized in developing and manufacturing high-quality biosimilar medicines. Aligning Alvotech's fully integrated model with BIOJAMP™'s commercial infrastructure and expertise will give Canadian patients access to a wide range of biosimilar products while significantly reducing healthcare system costs. This agreement and JAMP Pharma Group's consistent rapidly paced launches are strategic imperatives that support the Group's ambitions to become Canada's largest pharmaceutical company.

Quotes

« At JAMP Pharma Group, we're always listening to the needs of Canadians and healthcare professionals, as Canadians ourselves. The launch of Simlandi™, the first product to be commercialized by BIOJAMP™, is a novel formulation of adalimumab, never launched by a Canadian company despite the fact that this formulation is established as a standard of care in the United States and Europe. We'd be hard pressed to find a better example to clearly illustrate our commitment to meeting the specific needs of patients and healthcare professionals.

– **Bruno Mäder**, President and COO, JAMP Pharma Group

« BIOJAMPTM aims to simplify the experience of patients by reducing barriers and facilitating the transition process. As an example, we are proud to have developed an auto-injector designed for patients with dexterity challenges, who will now be able to operate the Simlandi™ auto-injector more confidently. We will also commercialize a new and unique-to-Canada 80 mg/0.8 mL, format which will reduce the number of injections for certain types of patients.

– **Thierry Lavoie**, Director of Marketing & Business Development, BIOJAMP™

About JAMP Pharma Group

The Jamp Pharma Group is a Canadian-owned company headquartered in the Montreal area. Having experienced remarkable growth over the past 10 years, the JAMP Pharma Group is active in all segments of the pharmaceutical market thanks to a portfolio of close to 300 molecules. The Group is among the industry leaders in terms of annual prescription volume(1). With nearly 40 new products approved by Health Canada in the past year, the JAMP Pharma Group is the Canadian leader in product launches(2), broadening the new treatment options available in Canada, including many specialty drugs. The Group also has a Wampole—Laboratoire Suisse Division with more than 180 over-the-counter products including a wide range of vitamins, supplements, and natural products, as well as prescription and branded products from its subsidiary Orimed Pharma.

Press Release

JAMP Pharma Launches SIMLANDI, a NEW High-Concentration, Low Volume, Citrate-Free formulation, Biosimilar to Humira, in Canada

PUBLISHED: APRIL 14, 2022

Ref: CNW

SIMLANDI™ provides patients access to high-concentration, low volume, citrate-free formulations of adalimumab, in 40 mg/0.4 mL and 80 mg/0.8 mL presentations, not available in Canada before this week

SIMLANDI™ is the first adalimumab biosimilar product launched by a Canadian-based company, JAMP Pharma Group

The creation of BIOJAMP™ Pharma along with the introduction of the JAMPCare™ patient support program are designed to simplify the transition of patients to SIMLANDI™

BOUCHERVILLE, QC, April 13, 2022 /CNW/ - JAMP Pharma Group ("JAMP Pharma"), a Canadian-owned pharmaceutical company headquartered in the Montreal area, announced today the launch of SIMLANDI™, a high-concentration, low-volume, citrate-free, biosimilar to Humira® (adalimumab) developed and manufactured by Alvotech. The biosimilar, with its 100 mg/mL adalimumab in 40 mg/0.4 mL and 80 mg/0.8 mL presentations, is the first biosimilar candidate to be commercialized by BIOJAMP™, a biosimilar division of JAMP Pharma Group.

"We are pleased to be the first Canadian company to offer adult patients in Canada access to a high-concentration, citrate-free form of adalimumab. SIMLANDI will also offer a unique 80 mg/0.8 mL dose that can reduce the number of starting injections by 50% for certain patients. This will be of particular interest to adult patients with conditions such as moderately to severely active ulcerative colitis and Crohn's disease," said Louis Pilon, CEO of JAMP Pharma Group.

"It is with great pride that we announce our first BIOJAMP commercial launch. This is a great milestone for the JAMP Pharma Group, it will help lower cost to the Canadian health care system and most importantly it brings added value to patients who will now have access to this high-concentration biosimilar of Humira®", said Bruno Mader, COO of JAMP Pharma Group.

In January 2022, JAMP Pharma and Alvotech announced Canadian approval of SIMLANDI, a high-concentration biosimilar candidate to Humira® (adalimumab), which was developed under the name AVT02 by Alvotech.

SIMLANDI is a recombinant fully human immunoglobulin G1 (IgG1) kappa monoclonal antibody (mAb) that specifically binds to tumor necrosis factor-α (TNF) and blocks its interaction with the p55 (TNFR1) and p75 (TNFR2) cell surface TNF receptors, thereby neutralizing the effect of TNF in inflammatory conditions.

In February 2022, JAMP Pharma announced the creation of BIOJAMP™ as part of its goal to establish itself as a leader in the Canadian biosimilars market. Both BIOJAMP™ and its JAMPCare™ patient support program are

SIMLANDI.

In Canada, SIMLANDI has been authorized for sale for the following indications: rheumatoid arthritis, polyarticular juvenile idiopathic arthritis, psoriatic arthritis, ankylosing spondylitis, adult Crohn's disease, adult ulcerative colitis, adult and adolescent (12 to 17 years of age weighing ≥ 30 kg) hidradenitis suppurativa, plaque psoriasis and adult and pediatric uveitis.

About JAMP Pharma Group

JAMP Pharma Group announces the commercial launch and product availability for PrJamteki™, the first biosimilar of Stelara® (ustekinumab) in Canada

Français

NEWS PROVIDED BY
JAMP Pharma ➞
Mar 01, 2024, 14:26 ET

- *PrJamteki™ was the first ustekinumab biosimilar to receive marketing authorization in Canada[1].*
- *PrJamteki™ is the second biosimilar developed under the exclusive partnership in Canada between JAMP Pharma Group and Alvotech.*
- *This second biosimilar launch in 2 years is a very important step, enabling BioJAMP™ to reinforce its leadership role in the Canadian biopharmaceutical industry.*

BOUCHERVILLE, QC, March 1, 2024 /CNW/ - JAMP Pharma Group ("**JAMP Pharma**"), a Canadian-owned pharmaceutical organization headquartered in the Greater Montreal area, announced today the commercial launch and product availablity for Jamteki™, a biosimilar of Stelara® (ustekinumab).

The currently approved presentations of Jamteki ™ are the 45mg/0.5mL pre-filled syringe with passive safety device for subcutaneous injection (PFS-SD) and the 90mg/mL PFS-SD. This is the second JAMP Pharma biosimilar to receive marketing authorization. In 2022, JAMP launched Simlandi®, a biosimilar of Humira® (adalimumab).

"*JAMP Pharma Group entered the biosimilars market by creating BioJAMP™ and introducing its very first biosimilar, Simlandi®. This important step in our portfolio advancement showcases our commitment to evolve in this market,*" said Louis Pilon, President and CEO at JAMP Pharma Group. "*It represents an opportunity for significant savings for provinces and insurers. BioJAMP™ aims to simplify the patient journey by reducing barriers and facilitating the transition process, notably with JAMP Care™, our patient support program, which offers a seamless experience for patients and healthcare professionals.*"

In February 2022, JAMP Pharma announced the creation of BioJAMP™ as part of its goal to establish itself as a leader in the Canadian biosimilars industry. BioJAMP™ and the JAMP Care™ patient support program are both designed to simplify the transition process to biosimilar medicines for patients and caregivers.»

Humira® is a registered trademark of AbbVie Biotechnology Ltd. Stelara® is a registered trademark of Johnson & Johnson.

About JAMP Pharma Group

JAMP Pharma Group is a Canadian organization headquartered in Boucherville, in the greater Montreal area. Having experienced exceptional growth over the past 10 years, JAMP Pharma Group is present in all segments of the pharmaceutical market with a portfolio of over 325 molecules and is one of the industry leaders in terms of annual prescription volume[2]. With over 130 new products authorized for sale by Health Canada in the past three years, JAMP Pharma Group is the Canadian leader in product launches[3], thereby constantly providing new and improved treatment options for Canadians, including many specialty drugs. The addition of a new local manufacturing site supports JAMP Pharma Group's vision of becoming the largest Canadian-owned pharmaceutical company.

In addition to its generic division, JAMP Pharma Group has several divisions such as Orimed Pharma®, BioJAMP™, Wampole®, Laboratoire Suisse, and Cosmetic Import, also offering prescription and branded products, biosimilars, and 180 over-the-counter products, as well as a varied range of vitamins, supplements, and natural health products. The JAMP Care™ patient support program is designed to assist both patients, and healthcare professionals in the use of specialty drugs and biosimilars offered by JAMP Pharma Group.

Remicade® (infliximab): 20 years of contributions to science and medicine

This article was published in the following Dove Press journal:
Biologics: Targets and Therapy

Richard Melsheimer[1]
Anja Geldhof[1]
Isabel Apaolaza[1]
Thomas Schaible[2]

[1]Medical Affairs, Janssen Biologics BV, Leiden, the Netherlands; [2]Medical Affairs, Janssen Pharmaceuticals, Horsham, PA, USA

Abstract: On August 24, 1998, Remicade® (infliximab), the first tumor necrosis factor-α (TNF) inhibitor, received its initial marketing approval from the US Food and Drug Administration for the treatment of Crohn's disease. Subsequently, Remicade was approved in another five adult and two pediatric indications both in the USA and across the globe. In the 20 years since this first approval, Remicade has made several important contributions to the advancement of science and medicine: 1) clinical trials with Remicade established the proof of concept that targeted therapy can be effective in immune-mediated inflammatory diseases; 2) as the first monoclonal antibody approved for use in a chronic condition, Remicade helped in identifying methods of administering large, foreign proteins repeatedly while limiting the body's immune response to them; 3) the need to establish Remicade's safety profile required developing new methods and setting new standards for postmarketing safety studies, specifically in the real-world setting, in terms of approach, size, and duration of follow-up; 4) the study of Remicade has improved our understanding of TNF's role in the immune system, as well as our understanding of the pathophysiology of a range of diseases characterized by chronic inflammation; and 5) Remicade and other TNF inhibitors have transformed treatment practices in these chronic inflammatory diseases: remission has become a realistic goal of therapy and long-term disability resulting from structural damage can be prevented. This paper reviews how, over the course of its development and 20 years of use in clinical practice, Remicade was able to make these contributions.

Keywords: Remicade, infliximab, monoclonal antibody, immune-mediated inflammatory disease, TNF inhibition, Crohn's disease, rheumatoid arthritis

Plain language summary

Prompted by the recent twentieth anniversary of the first approval of Remicade® (infliximab; Janssen Biotech, Inc., Horsham, PA, USA), a first-in-class monoclonal antibody tumor necrosis factor α (TNF) inhibitor, the authors have written this review in order to recognize the drug's contributions to science and medicine. Remicade's first therapeutic indication, Crohn's disease, was followed by another five indications, all of which are immune-mediated inflammatory diseases (IMIDs). A common factor in these diseases is increased expression of the cytokine TNF, which drives the underlying inflammation causing them. Through inhibition of TNF, this chronic inflammation can be suppressed and the disease successfully treated. In the course of Remicade's development and its use in clinical practice, several important firsts were achieved. Remicade established the proof of concept that targeted therapy (ie, blockade of a single inflammatory mediator) can be a successful treatment approach for IMIDs. It demonstrated

that there is a role for monoclonal antibodies in the treatment of chronic diseases. The need to establish its safety profile led to the development of new methods and standards for post-marketing commitment studies. Studies in current indications, in indications where it was not efficacious, and of its safety profile have taught us much about the immune system and greatly improved our understanding of the pathophysiology of several IMIDs. Lastly, the availability of Remicade and other TNF inhibitors has transformed the practice of medicine in these diseases, where more ambitious goals of therapy are now possible. Each of these advancements has helped to bring about a revolution in medicine that is still ongoing today.

Introduction

On August 24, 1998, the monoclonal antibody (mAb) Remicade® (infliximab; Janssen Biotech, Horsham, PA, USA) received approval from the US Food and Drug Administration (FDA) for the treatment of Crohn's disease (CD), thereby becoming the first tumor necrosis factor-α (TNF) inhibitor available for use in clinical practice. In the ensuing years, this initial indication was followed by approval in another five adult and two pediatric chronic inflammatory conditions both in the USA[1] and around the globe (Figure 1). Beyond

offering a welcome new treatment option for patients, it has contributed to several important advances in science and medicine, which will be the focus of this review.

Remicade's approval represented the culmination of two independent sets of research that began in 1975 when both TNF and hybridoma technology, the method for producing monoclonal antibodies, were first described in the literature.[2,3] Subsequent research on TNF identified its role not only in host response, but also in the pathophysiology of a number of immune-mediated inflammatory diseases (IMIDs), such as CD and rheumatoid arthritis (RA). This observation led to the question of whether blockade of TNF could serve as a treatment for these diseases. At the time, conventional treatments for IMIDs, such as immunosuppressants and corticosteroids, treated symptoms of disease, but not the underlying pathophysiology, and were associated with both limited efficacy and side effects.

However, the feasibility of targeted therapy in this setting was unknown. In a complex network of inflammatory mediators with pleiotropic, sometimes overlapping functions, could inhibiting a single cytokine such as TNF suppress inflammation in a clinically meaningful way? How could such a cytokine be inhibited? Because of their high ligand specificity and affinity, mAbs were obvious candidates, but had not met expectations as therapeutics. Could they achieve their potential? These questions were first answered in 1992 when Remicade, then known simply as cA2, was used to confirm the hypothesis that the inflammation driving RA is mediated by TNF and can be suppressed by its blockade.[11]

The development of Remicade up to that point and since then has been a classic example of how an improvement in understanding of pathophysiology can lead to a therapeutic breakthrough, which in turn leads to a deeper understanding of pathophysiology. Each new learning led to another question to be answered, which has resulted in the development of a significant body of scientific and medical research: a literature search for the word "infliximab" today reveals more than 13,000 publications, a number that approaches 50,000 when including other TNF inhibitors such as etanercept (Enbrel®; Immunex Corporation, Thousand Oaks, CA, USA) and adalimumab (Humira®; AbbVie, North Chicago, IL, USA). Many of the learnings are now common knowledge, but in 1992 were hypotheses. It is only with hindsight that we can put them into perspective (Figure 1).

This article reviews these learnings as they developed over time: the discovery of TNF; Remicade's clinical development, primarily in RA and CD, which are its earliest and most prominent indications; its evaluation in other diseases; the establishment of its safety profile; and its role in changing clinical practice. It is important to note that the participants in this scientific journey were not only Janssen and its commercial partners and local distributors (Merck, Sharp and Dohme [MSD] in Europe, Turkey, and Russia, and Mitsubishi Tanabe Pharmaceutical Corporation in Japan, Taiwan, and Indonesia), butalso a large number of independent researchers. Their collective work demonstrates that the learnings from a drug do not stop at the end of its formal development, but can continue for years afterward.

With the recent 20-year anniversary of Remicade's first approval in 1998, it is fitting to reflect on its contributions to science and medicine.

TNF is a key driver of inflammation

In 1975, Carswell et al described an experiment in which tumor regression was observed in mice injected with endotoxin from the pathogenic bacterium *Serratia marcescens*. They isolated a substance in the serum of these mice that led to this regression and named it "tumor necrosis factor" (TNF).[2] In 1985, Beutler et al studied a factor which caused cachexia, a wasting syndrome, by acting on lipoprotein lipase and other metabolic pathways.[62] This factor, which they called "cachectin", was later found to be TNF. Simultaneously, Dayer et al, while searching for a factor that mediated shock, isolated a substance from cells of monocytic lineage which was also found to be TNF.[63]

These three independent discoveries of TNF in separate fields of research display vividly the central and complex role that it plays in the immune system. It is a key driver and regulator of the body's inflammatory response[64] and is involved in immune surveillance and homeostasis.[65,66]

TNF is not usually detectable in healthy populations, but is increased in both serum and tissue under inflammatory and infectious conditions, and after tissue injury.[67] It is one of the first cytokines to appear in the blood after injury or stress and does so within minutes,[65] secreted primarily by macrophages and monocytes, but also by other immune cells, eg, neutrophils, T cells, and natural killer (NK) cells, as well as non-immune cells.[67] The concentration of TNF in serum correlates with the severity of infection. Other pro-inflammatory cytokines, such as interleukin (IL)-6 and IL-1, appear later and are at least in part dependent on prior release of TNF.[65] The 24-kDa membrane-bound form of TNF (tmTNF) is cleaved by a metalloproteinase enzyme, TNF-α-converting enzyme (TACE), to release a 17-kDa soluble form (sTNF). Both forms are biologically active.[67] They mediate their effects

through binding to either of two receptors, TNFR1 (p55) or TNFR2 (p75). TNFR1 is expressed on most cell types and is generally activated by sTNF, while TNFR2 is expressed primarily on immune, specifically T-regulatory, and endothelial cells and is preferentially activated by tmTNF.[65,68,69] TNFR1 seems to be primarily involved in the inflammatory response and mediating apoptosis while TNFR2 appears to be important for tissue repair, immune modulation, and homeostasis.[65,69]

TNF exerts its pleiotropic effects via a number of mechanisms, such as macrophage activation, differentiation and phagosome formation,[64] activation of neutrophils and NK cells, and promotion of cell adhesion, apoptosis, and cellular proliferation.[70] These mechanisms contribute to the body's common manifestations of inflammation, eg, fever, vasodilation/edema, sleep disruption, regulation of coagulation and tissue degeneration, as well as to the manifestations of downregulation of the inflammatory response, eg, promotion of immune modulation, tissue regeneration, formation and maintenance of granulomas, immune surveillance, and homeostasis.[66,67] TNF's functions are seemingly contradictory: it plays a role in both tissue degeneration and tissue repair, cellular proliferation and apoptosis, and has anti-tumor and tumor pro-growth properties.[65] These functions are, in fact, complementary. Succinctly stated, in a time- and context-dependent manner, TNF drives a rapid and vigorous inflammatory response triggered by infection or injury (primarily via sTNF/TNFR1), and also functions to limit the extent and duration of this inflammatory response when the trigger has been resolved (primarily via tmTNF/TNFR2).[69] These dual roles will, in part, explain later observations in patients treated with TNF inhibitors.

Studies in the 1980s and 1990s showed that levels of TNF were increased in a number of pathophysiological conditions. In patients with sepsis, elevated levels of TNF appeared to correlate with mortality. Moreover, peak elevation in monocyte TNF expression correlated with septic episodes.[71] Overexpression was also observed across seemingly unrelated conditions, often in the absence of infection. Elevated levels were present in the mucosa and stools of patients with inflammatory bowel disease (IBD), and mucosal cells expressing TNF had been detected in patients with CD.[72] Pro-inflammatory cytokines such as TNF and IL-1 were detected in the synovial fluid of patients with RA, and TNF surface receptors were found to be upregulated in active RA tissues.[73]

These findings led to the question: if TNF is a driver of inflammation and these conditions are primarily diseases of chronic inflammation, could blockade of TNF be a successful treatment strategy in these conditions?

Two key proofs of concept are established with Remicade

Would blocking a single cytokine be effective in these complex immune-mediated diseases? How could such a cytokine be blocked?

The advent of monoclonal antibodies

Traditional development of pharmaceuticals in the past had been empirical, where potential agents were not targeted to a specific mediator of disease and their mechanism of action was not precisely understood.[65] In IMIDs, while conventional drugs such as steroids and immunosuppressants are beneficial, they have broad unspecific effects and are characterized by limited efficacy in itself or efficacy constrained by unacceptable toxicity. A deeper understanding of the pathophysiology of disease would have offered the possibility of testing a new approach to pharmaceutical development, where targeting specific mediators of disease provides benefit with fewer toxicities.

In the 1980s and 1990s, the most readily available approach to targeted therapy was through the use of mAbs, the largest class of therapeutic proteins derived from recombinant DNA techniques, known as biologics. However, 10–20 years after the publication of Köhler and Milstein first describing them,[3] they had not met expectations as therapeutics.[74] The mAbs available at that time were fully murine and were associated with a number of limitations. As foreign proteins, they were immunogenic and associated with high anti-drug antibody (ADA) rates, which resulted in both safety implications and a negative effect on pharmacokinetics (PK). In addition, murine mAbs were poor at inducing antibody effector function in humans. As late as 1993, only one mAb had received regulatory approval for clinical use, Janssen's muromonab, also known as OKT3, for short-term use in transplant rejection with concomitant immunosuppression, a setting in which ADA risk was limited.[6]

Yet, advances in mAb technology were coming to fruition at that time. Under the assumption that replacing the murine content of mAbs with human equivalents would both reduce the risk of ADA and improve effector function, researchers used new molecular biology

techniques to develop chimeric mAbs, which are produced from genes whose DNA sequences are approximately 75% human, where only the DNA sequence for the variable domain within the antigen-binding fragment (Fab) remains murine.[4–6] The assumption proved correct and in 1994, Janssen's abciximab (ReoPro®; Janssen Biotech, Horsham, PA, USA), a Fab fragment, became the first chimeric mAb to receive regulatory approval, for the prevention of platelet-mediated thrombosis during angioplasty.[6] The first whole chimeric mAb to receive regulatory approval was rituximab (Rituxan®; Genentech, South San Francisco, CA, USA; MabThera®; Roche Registration GmbH, Grenzach-Wyhlen Germany) in 1997 for use in lymphoma. Both were approved for single or short-term use, leaving questions about long-term use of mAbs unanswered.[6]

In the early 1990s, Janssen's Immunology unit (then known as Centocor) developed the chimeric anti-TNF mAb, cA2.[8] Based on data showing that TNF blockade prevented septic shock in animals given a lethal dose of endotoxin,[71,75] Janssen selected sepsis as the initial focus for the clinical development of cA2. Sepsis was an obvious candidate for targeted therapy with mAbs because of its high rate of mortality, which increased the acceptability of possible adverse drug reactions (ADRs), and the need for short-term therapy, limiting the possibility of immunogenicity as a concern. However, in the preliminary clinical study, there were no differences in patterns of cytokine activation or mortality with cA2 relative to placebo,[9,10] and the program was discontinued. Most researchers in the field concluded that TNF inhibition failed in sepsis because blocking a single cytokine could not work in diseases characterized by a complex mixture of redundant inflammatory mediators.[76] Based on these results, the expectations for targeted therapy in other inflammatory conditions were low.

Proof of concept in RA and CD

However, in parallel to the research in sepsis, Ravinder (Tiny) Maini and Marc Feldmann at the Kennedy Institute in London had completed research suggesting that blockade of a single cytokine could reap therapeutic benefit in an IMID. When evaluating a batch of synovium samples from patients with active RA, they observed elevated levels of pro-inflammatory cytokines in all of them.[65] This was striking, since such cytokines are usually produced for short periods only (hours to 2 days), and suggested that in RA their production was continuous. The key breakthrough came in 1989, when Brennan et al suggested for the first time that TNF may be a pivotal cytokine in the pathophysiology of RA.[7] Their study, in which several pro-inflammatory cytokines (TNF, IL-1, IL-6, granulocyte-macrophage colony-stimulating factor) were neutralized one by one, revealed that blocking TNF in synovial culture led to the inhibition of the others. This was consistent with the observation that TNF is one of the first cytokines to appear after injury or stress and led to the concept of a pro-inflammatory cascade at work in RA, with TNF at its beginning.

Based on these observations, in 1993, Elliott et al of the same group in London conducted a proof-of-concept study in humans, where 20 patients with severe RA were treated with either two 10 mg/kg or four 5 mg/kg infusions of cA2, given 2 weeks and 4 days apart, respectively.[11] Positive clinical improvements, as measured by swollen and tender joint counts and pain, and biochemical responses, as measured by reduced levels of inflammatory mediators, were observed in all patients, providing the first evidence that TNF blockade reduced inflammation and improved symptoms in RA. The effect faded after a few weeks.

Elliott et al proceeded to conduct a 73-patient randomized, placebo-controlled trial of a single infusion of two doses (1 mg/kg and 10 mg/kg) of cA2 in RA.[13] Both doses proved highly effective (combined dose groups with a 61% clinical response [Paulus 20%] vs 8% for placebo at week 4, $P<0.001$), but the maximal improvement and its duration were dose dependent. The rate of adverse events was similar across the cA2 arms and the placebo group. As found in the first study, the benefits disappeared within a few weeks. In a first exploration of retreatment, several initial responders from the first study were given cA2 for up to three additional cycles administered upon relapse.[77] The patients regained their responses, but they were again temporary, and the time to relapse generally shortened with each successive cycle, raising concerns about ADAs developing over time (four of seven patients were ADA positive).

Gastroenterologists, who had observed increased levels of TNF in patients with CD, also explored its blockade as a possible treatment. In 1993, the group of Sander van Deventer at the Academic Medical Centre in Amsterdam reported on a female patient, age 12 years, with CD who was non-responsive to conventional therapies and received cA2 as a compassionate-use treatment.[12] She received two infusions of cA2 10 mg/kg 2 weeks apart and responded immediately after the first dose. Clinical and endoscopic remission was observed, but, as with RA, this was

temporary, with symptoms returning after 3 months. Van Dullemen et al from the same group in Amsterdam then conducted an open-label proof-of-concept study of a single dose of cA2 (10 mg/kg or 20 mg/kg) in 10 patients with steroid-non-responsive CD.[14] Within 4 weeks, eight patients showed normalization of their Crohn's Disease Activity Index (CDAI) scores and near-complete healing of mucosal ulcerations, images of which merited display on the cover of the journal in which the data were published (Figure 2). The average duration of response after a single infusion was 4 months, and cA2 was well tolerated among all patients.

This small, uncontrolled study supported the hypothesis that TNF was a major contributor to the pathophysiology of CD and paved the way for Targan et al to conduct a 12-week multicenter, double-blind, placebo-controlled trial in 108 patients with treatment-resistant CD.[15] In 1997, they reported that 65% of patients receiving a single dose of cA2 (5, 10, or 20 mg/kg) had a clinical response by week 4 compared with 17% of placebo-treated patients ($P<0.001$). The rates of adverse events were similar among treatment groups. Rutgeerts et al explored retreatment in this trial, where patients with an initial response to cA2 were given an additional four open-label infusions of 10 mg/kg every 8 weeks (q8w) beginning 12 weeks after the initial infusion.[78] Similarly to the previous experience in RA, they found that the initial benefit of cA2 could be regained and, owing to the regular q8w retreatment schedule rather than waiting for relapse, it was also sustained for the duration of the study. cA2 was well tolerated and the rate of immunogenicity was low (10%).

These studies showed that blocking one cytokine, TNF, could have profound, if temporary, clinical benefits in both RA and CD. The benefit observed in both conditions was profound and rapid. Moreover, the lack of significant safety issues despite these benefits was encouraging. While the cause of the TNF-driven inflammation was still unknown, and its blockade was not a cure, a possible method to suppress it had been found, suggesting potential for clinical use. However, for this therapeutic strategy to work, it was clear that sustained TNF blockade would be necessary. Initial experience with retreatment was positive, but would it work in the long term?

How can dose and concomitant medications influence the rate of efficacy and immunogenicity? Phase II trial in RA

The possibility of long-term TNF blockade with cA2 as a treatment strategy for chronic inflammatory diseases raised three fundamental questions: 1) Could mAbs be administered repeatedly as long-term therapy? Immunogenicity was the primary concern as it could be associated with ADRs (eg, allergic or hypersensitivity reactions) or limits on efficacy (neutralization and clearance of the mAb); 2) Would long-term TNF blockade succeed, or would the disease circumvent this blockade and restore the chronic inflammation via another pathway? 3) Would long-term TNF blockade be associated with an unacceptable safety risk? Given the function of TNF, infections and malignancies were of particular concern. Clinical development in RA and CD proceeded, starting with the first of these questions, immunogenicity.

The relationship between dose, PK, efficacy, safety, and immunogenicity of cA2 was first studied in a phase II, double-blind, placebo-controlled RA trial, conducted in 1995–1996, evaluating cA2 alone or in combination with methotrexate (MTX), an immunomodulator and the gold-standard conventional synthetic disease-modifying antirheumatic drug (csDMARD) in RA.[79] In the trial, 101 patients with clinically active disease despite receiving MTX were randomized to receive cA2 at 1, 3, or 10 mg/kg, with or without MTX, or placebo plus MTX, at weeks 0, 2, 6, 10, and 14, and were followed through week 26. The rationale for an induction regimen at weeks 0 and 2 followed by 4-week intervals thereafter was two-fold: 1) that high-dose induction would suppress inflammation rapidly and profoundly, and 2) that early, high systemic exposure of the immune system to an antigen, in this case cA2, could result in increased tolerance, thereby reducing immunogenicity.

Approximately 60% of patients in all dose groups had responded by week 2, but the degree and duration of response varied by dose and MTX use. Patients receiving cA2 1 mg/kg without MTX experienced a rapid decline in response, while patients receiving 3 or 10 mg/kg without MTX showed sustained responses. In all three dose groups, the response was longer in duration when combined with MTX. Serum cA2 concentrations were stable in patients receiving 3 or 10 mg/kg alone or in combination, though consistently higher in those receiving MTX. In contrast, patients receiving 1 mg/kg without MTX showed an elimination of cA2 in the serum by the end of the 4 weeks, whereas stable, albeit low, levels were maintained in patients receiving MTX. On the important question of immunogenicity, there were two key observations: rates of ADA were lower for all doses when combined with MTX and were inversely related to cA2 dose administered (Figure 3).

These findings demonstrated not only that retreatment with TNF blockade could be effective in sustaining the initial treatment benefit, but also how immunogenicity of mAbs could be reduced: a high-dose induction regimen was associated with tolerance to cA2, levels of immunogenicity were inversely proportional to dose, and co-administration with MTX both reduced immunogenicity and improved the PK of cA2.

First approval of Remicade: CD

Despite the initial proof-of-concept study of targeted TNF blockade with cA2 being conducted in RA, CD was selected as the first indication for commercial development because it was believed to have a more expedited path to regulatory approval owing to its severity in patients not responding to conventional therapies.

Having completed the Targan study in luminal CD,[15] the next trial was conducted in fistulizing CD, a debilitating complication observed in as many as 20% of CD patients where no therapy had been shown to be effective. Present et al evaluated the efficacy of cA2 to close draining fistulas in 94 patients randomized to receive an induction dose at 0, 2, and 6 weeks of placebo, or 5 or 10 mg/kg of cA2, and then followed through week 18.[20] The primary endpoint was closure of ≥50% of fistulas for at least two consecutive visits 4 weeks apart. The response rate was 26% in placebo patients compared with 68% (P=0.002) and 56% (P=0.02) in the 5 and 10 mg/kg groups, respectively. The safety results were consistent with those observed in the initial studies.

The Targan and Present studies thus demonstrated the safe and effective use of cA2 in treatment-resistant, moderate-to-severe CD, and were the basis for its first regulatory application. The FDA granted accelerated review and approved cA2, renamed Remicade (infliximab), on August 24, 1998.[16] Approval by the European Medicines Agency (EMA) in Europe was granted a year later, followed by approvals in Brazil (2000), Canada (2001), Japan (2002), and over 100 other countries (Janssen, data on file).

Importantly, the FDA and other health authorities granted approval for single treatment with Remicade, but recognized the need for maintenance treatment in CD and required that Janssen study it in the phase III setting as a condition of approval.

Can long-term blockade of TNF lead to sustained suppression of inflammation? Phase III trials in RA and CD

Maintenance treatment was first studied in the phase III ATTRACT trial, which evaluated Remicade over a 2-year period in moderate-to-severe RA despite treatment with MTX.[19] Patients, all of whom remained on stable doses of MTX, were treated with an induction regimen (infusions at weeks 0, 2, and 6) of either placebo or Remicade 3 or 10 mg/kg, followed by infusions of the same dose administered every 4 weeks (q4w) or q8w thereafter (with placebo infusions as needed to maintain the blind). The clinical effects of all four Remicade groups were superior to placebo and similar to each other at the primary endpoint, the proportion of patients who achieved ≥20% improvement in the

American College of Rheumatology response criteria (ACR20) at 6 months (50.0% in the 3 mg/kg q8w group [standard approved dose] vs 20.0% in the placebo group, $P<0.001$), and were sustained through the 2-year duration of the trial with a mild dose response.[80] This dose response, combined with another trial evaluating dose escalation for Remicade in RA, START,[81] led to the approval of dose increase above 3 mg/kg in RA for lack of initial response or later loss of response.

In CD, maintenance treatment with Remicade was studied in the phase III ACCENT I and II trials for luminal and fistulizing disease, respectively.[26,31] Both trials had a randomized withdrawal design, where all patients were initially treated with Remicade, after which responders were randomized either to Remicade maintenance therapy (5 or 10 mg/kg in ACCENT I or 5 mg/kg in ACCENT II) or placebo maintenance q8w for 1 year. Patients who lost response to treatment crossed over to a dose of Remicade 5 mg/kg higher than their randomized dose. In ACCENT I, at crossover, the dose was administered upon symptom return, allowing the evaluation of episodic use of Remicade. In ACCENT II, the regular q8w maintenance schedule was continued after crossover. Both studies met their primary endpoints, which were clinical remission and time to loss of response at week 30 in ACCENT I and median time to loss of response (≥50 reduction in number of draining fistulas) in ACCENT II. In both studies, the initial Remicade induction response waned in patients randomized to placebo maintenance, while the benefits were largely sustained in patients randomized to continue Remicade (with a dose response in ACCENT I). Moreover, dose escalation resulted in regaining response in patients who lost their initial response.[82] Episodic retreatment with Remicade in ACCENT I revealed important lessons. While response was regained, outcomes were generally worse and led to higher levels of ADA than in patients who maintained a regular q8w maintenance schedule.[83] In both ACCENT studies (as in ATTRACT), ADA development was associated with an increased risk of infusion reactions and subsequent loss of response.[26] These observations, confirmed independently,[84] provided support to the then novel, now accepted, hypothesis of an important dynamic of immunogenicity and serum drug levels: not only do ADAs lead to low serum levels of drug, but low serum levels lead to increased ADAs.[85] It is now well understood that maintaining target levels of the drug is important to minimize the development of ADAs.

Thus, the phase II/III program had answered all three initial questions about long-term TNF blockade with Remicade: 1) mAbs could be administered repeatedly as maintenance therapy, and several strategies were identified to reduce the risk of ADA; 2) sustained TNF blockade could result in long-term suppression of disease; 3) to the degree that the safety profile of a drug could be assessed with fewer than 2,000 patients treated for ≤2 years, and considering the efficacy observed, the overall benefit–risk profile was considered acceptable (see "Establishing the safety profile of Remicade", later in this review). On the basis of the results of the ATTRACT and ACCENT I/II trials, Remicade was approved as induction and maintenance therapy for RA in 1999 and as maintenance therapy for CD in 2003.

Is TNF blockade disease-modifying?

At the time of the initial approvals in CD and RA, it was not known whether TNF blockade would be disease-modifying and thereby inhibit the progressive, irreversible structural damage caused by these diseases. This question was first answered in RA, where joint destruction is a hallmark of the disease and a predictor of poor functional outcome and disability. The ATTRACT study was the first to show that progression of joint damage could be inhibited with TNF blockade. The mean increase in radiographic progression score at 1 year (using the Sharp/van der Heijde score [SHS]), the co-primary endpoint of the trial, was 0.6 for Remicade across all doses versus 7.0 for the MTX group ($P=0.001$), indicating inhibition of joint damage progression in the majority of Remicade-treated patients, which was unprecedented for any therapy at that time (Figure 4).[21] This effect was sustained through to the end of the 2-year trial.[80] Importantly, the inhibition of progression was observed regardless of whether patients had a clinical response to Remicade or not. Further subgroup analysis showed that inhibition of joint progression occurred in patients with early disease as well as those with established disease, another important finding.

Analogous work was done in the CD clinical trials, where the endpoints studied included the effect of Remicade on mucosal healing and the need for surgery. The original observation by Derkx et al[12] and van Dullemen et al,[14] that Remicade healed the mucosa in CD patients, was confirmed in ACCENT I, where the healing (defined as the absence of mucosal ulcerations in all segments where they had been observed on endoscopy at baseline) was observed as early as the end of induction and was sustained through to the end of the trial: 50% of initial responders receiving q8w maintenance

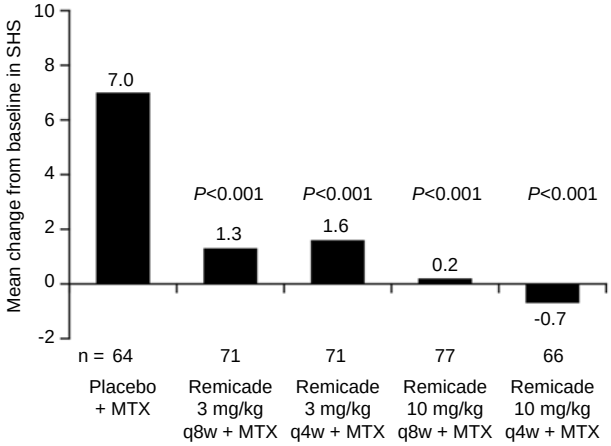

Figure 4 Progression of structural damage in RA at week 54 in the ATTRACT trial.
Notes: Data from Lipsky.[21] *P*-values vs placebo + MTX arm.
Abbreviations: MTX, methotrexate; q4w, every 4 weeks; q8w, every 8 weeks; SHS, Sharp/van der Hejde score.

therapy had complete mucosal healing at 1 year compared with only 7% of initial responders receiving episodic maintenance therapy (*P*=0.007).[82] In addition, in both ACCENT I and ACCENT II, Remicade maintenance therapy was associated with a reduced rate of hospitalizations and surgeries.[89,90]

The inhibition of joint destruction and the mucosal healing effects with Remicade in patients with RA and CD demonstrated that TNF blockade was not just an effective agent on clinical symptoms, but was also disease-modifying, implying an impact on the course of the disease. Research into the exact mechanism of Remicade's effect followed.

What is Remicade's mechanism of action? Analyses from RA and CD clinical trials

It was of interest to determine whether the TNF-dependent inflammatory cascade observed in the initial synovial cell culture experiments77 occurred in vivo. In RA patients receiving Remicade, rapid decline in serum IL-6 levels on the day of treatment confirmed that a TNF-dependent cytokine cascade was indeed occurring.[91] Reductions in other pro-inflammatory mediators and chemokines were also observed.[10] Similarly, C-reactive protein (CRP, a serum marker of systemic inflammation) was observed to decline rapidly after administration of Remicade.[19] Detailed mechanistic studies were performed, and multiple aspects of the disease were found to improve, including immune function, joint function and hematological parameters.[65] Immunohistological studies were conducted to investigate changes in the synovium, where reductions in the expression of adhesion molecules and in cell infiltration were observed, as were reductions in angiogenic factors and angiogenesis.[10] Taylor et al demonstrated in a neutrophil radiolabeling study that the influx of granulocytes was reduced by approximately 50% in the joints within 2 weeks of a single dose of Remicade, indicating that reduced recruitment of these and other leukocytes to the joints is an important aspect of the mechanism of anti-TNF therapy.[92]

Similar mechanistic studies were performed in CD. As with RA, Remicade treatment of CD patients was associated with a rapid reduction of CRP.[15] Histological evaluation of colonic biopsies revealed a reduction in detectable TNF after treatment and provided evidence of reduced infiltration of inflammatory cells and other inflammatory markers at these sites. Analysis of lamina propria mononuclear cells of the intestinal mucosa showed that Remicade treatment caused a reduction in the number of cells capable of expressing TNF and interferon-γ.[93,94]

As an antibody, Remicade functions in two ways: it binds directly to s/tmTNF via its Fab (antigen-binding) region and has a functional Fc (constant) region. Through both, its possible mechanisms of action of TNF inhibitors generally fall into two categories: 1) blockade of TNF-receptor-mediated signaling through neutralization of sTNF and tmTNF; and 2) removal of TNF-expressing cells by induction of Fc- or tmTNF-mediated effector mechanisms, such as antibody-dependent cellular cytotoxicity (ADCC) and apoptosis (Table 1). The relative contribution of these mechanisms to Remicade's efficacy remains uncertain and possibly differs by disease. For example, the role of anti-TNF-induced apoptosis of immune cells in reducing inflammation in RA synovial tissue is unclear,

while evidence exists for such a process in the bowel mucosa in IBD.

Early clinical evidence that the mechanism of action of anti-TNF therapy in CD differs from RA was the observation that etanercept, a p75(TNFR2)-IgG Fc receptor fusion protein, did not show efficacy in CD.[95] Certolizumab (Cimzia®; UCB, Smyrna, GA, USA), a PEGylated IgG Fab fragment, demonstrated efficacy in CD, but seemingly less so than Remicade and adalimumab (both of which are full antibodies), especially in induction of clinical response.[96] A comparison of the differing characteristics of the TNF inhibitors tested in CD provides insight into possible explanations for these differences. All TNF inhibitors bind to both sTNF and tmTNF, but the nature of this binding differs between them. Remicade and adalimumab, as full antibodies, are bivalent; ie, capable of binding two molecules of TNF simultaneously, enabling them to form complexes.[97] Certolizumab and etanercept are both monovalent. Remicade, adalimumab, and certolizumab have high affinity for tmTNF, while etanercept has lower affinity for tmTNF than the antibodies.[94] Remicade and adalimumab have fully functional Fc fragments, while etanercept has lower Fc activity than the full mAbs and certolizumab has no Fc fragment at all.[94] Together, this evidence suggests that in CD, in addition to the neutralization of TNF, one or more effector mechanisms are involved in the resolution of inflammation and mucosal healing (Table 1). Research continues today to determine exactly which mechanisms contribute to the efficacy of these agents.

The results of mechanistic studies of TNF inhibitors combined with their demonstrated efficacy confirmed the role of TNF in the pathogenesis of both RA and CD. The next question was whether TNF inhibition would be an effective therapeutic strategy in other conditions characterized by TNF elevation.

TNF elevation does not always mean TNF mediation

Is TNF blockade effective in diseases beyond CD and RA?

Remicade approval in additional IMIDs

The first evidence of efficacy of TNF blockade beyond RA and CD came from anecdotal reports in clinical practice, in which patients treated with Remicade for CD experienced improvements in extraintestinal manifestations of their disease, specifically ankylosing spondylitis (AS)[98] and psoriasis (PsO).[99] These findings led to clinical development in these indications. Psoriatic arthritis (PsA) and ulcerative colitis (UC) were also studied owing to their related pathogenesis to RA and CD. Health authority approvals for AS, PsA, PsO, and UC were received between 2003 and 2006, followed by pediatric CD (2006) and pediatric UC (2011).[18]

The efficacy of Remicade in each of these conditions was comparable with that seen in RA and CD (Figure 5), and these results brought new insights to the understanding of the pathogenesis of each. For instance, effective treatment of UC,

Table 1 Possible mechanisms of clinical efficacy of TNF blockade with Remicade

Mechanism of action	RA, AS, PsA, and PsO	IBD (CD and UC)
Mechanisms involving the Fab (antigen binding) region		
Blocking TNFR1 and TNFR2 activity via binding and neutralization of s/tm TNF	√	√
Reverse (outside-to-inside) signaling via binding to tmTNF		√
Apoptosis of lamina propria activated T cells		√
Suppression of cytokine secretion		√
Mechanisms involving the Fc (constant) region		
Induction of CDC on tmTNF-expressing target cells (via C1q binding)		√
Induction of ADCC on tmTNF-expressing target cells (via FcγRIIIa binding expressed on effector cells)		√
Induction of regulatory macrophages in mucosal healing		√

EXPRESS[b,38]	PBO vs Remicade 5 mg/kg	PsO	75% improvement in PASI score at Week 10
EXPRESS II[b,40]	PBO vs Remicade 5 mg/kg	PsO	75% improvement in PASI score at Week 10

Figure 5 Efficacy of Remicade in pivotal phase II/III clinical trials in adult indications: odds ratio of primary endpoint.

Notes: [a]Most trials evaluated multiple doses of Remicade. In the treatment arms shown (the generally approved doses), the Remicade dosing regimen tested was induction (infusions at weeks 0, 2, and 6) followed by q8w maintenance, with the exceptions of the Targan and Present studies, where single infusion and induction only, respectively, were tested, and of the AS trials (Braun and ASSERT), where induction followed by q6w maintenance was tested. [b]Janssen, data on file. [c]PBO of AZA. [d]Major secondary endpoint. The primary endpoint was a continuous variable for which an odds ratio was not calculated.

Abbreviations: ACR20, American College of Rheumatology 20% response; AS, ankylosing spondylitis; ASAS20, Ankylosing Spondylitis Activity Score 20% response; AZA, azathioprine; BASDAI, Bath Ankylosing Spondylitis Disease Activity Index; CD, Crohn's disease; MTX, methotrexate; MTX-IR, methotrexate inadequate responders; PASI 75, Psoriasis Area and Severity Index 75% reduction; PBO, placebo; PsA, psoriatic arthritis; PsO, psoriasis; q6w, every 6 weeks; q8w, every 8 weeks; RA, rheumatoid arthritis; UC, ulcerative colitis.

previously viewed to be a Th2-mediated disease, with the blockade of TNF, a cytokine associated with Th1-mediated diseases such as RA, CD, and psoriasis, contributed to a reassessment of the Th1/Th2 paradigm in the pathogenesis of IBD.[100] Treatment of PsA with Remicade demonstrated that TNF drives the inflammation not just in joint-related signs and symptoms and structural damage,[101] but also in its other major clinical manifestations, such as PsO, enthesitis, and dactylitis.[32] In AS, TNF inhibition demonstrated efficacy on signs and symptoms of disease, but, in contrast to RA and PsA, it had no apparent effect on structural damage in clinical trials, despite a reduction in bone/spinal inflammation as measured by magnetic resonance imaging (MRI). Later non-randomized studies suggested that TNF blockade reduces progression of structural damage in the long term (≥2 years).[102,103] In psoriasis, two targeted therapies (alefacept, an anti-CD2 agent, and efalizumab, an anti-CD11 agent) were approved by the FDA and the latter by the EMA, but had modest efficacy, and in the case of efalizumab, emerging safety issues in the postmarketing setting. They were later removed from the market.[104–106] In contrast, TNF inhibitors provided evidence that targeted systemic therapy could have both proven efficacy and acceptable safety in the setting of psoriasis.

Unsuccessful clinical indications of TNF blockade

In addition to the approved indications, both Janssen and independent investigators have evaluated Remicade in other disorders associated with elevated TNF, including both other IMIDs, such as asthma and multiple sclerosis (MS), and diseases not generally characterized as IMIDs, such as infectious diseases, cancer, and cardiovascular conditions (Table 2). In each of these disorders, there were mechanistic, in vitro and/or animal data supporting the hypothesis that TNF blockade could be beneficial. In a few, such as systemic lupus erythematosus (SLE) and cancer, there was reason to believe that TNF blockade could either exacerbate the disease or treat it, reflective of the multiple functions of TNF. However, even in these

Notes: [a]Janssen-sponsored study. [b]A randomized, placebo-controlled trial was conducted to evaluate Remicade plus MTX for the treatment of polyarticular-course juvenile rheumatoid arthritis (JRA). While Remicade produced an important, rapid, and durable clinical effect in children with JRA at 1 year, the difference between Remicade and placebo was not statistically significantly different at the primary endpoint, ACR Pediatric 30 criteria at week 14, and thus regulatory approval was not obtained. Of note, the sample size was reduced, as one site of this trial was excluded owing to potential patient unblinding.[37]
Abbreviation: IMID, immune-mediated inflammatory disorder.

conditions, the unmet medical need and the potential benefit justified testing TNF blockade as a treatment.

In several of the IMIDs, efficacy was observed in initial clinical studies, but for various reasons full development did not follow. Based on small studies, Remicade received regulatory approval in Japan for two rare diseases prevalent in the Japanese population, Behçet's and Kawasaki disease.[110,111,117,118] In hidradenitis suppurativa and uveitis, initial studies suggesting efficacy with Remicade led to the development and approval of other TNF inhibitors in these indications.[116,131,148] In autoimmune hepatitis and SLE, efficacy was observed in proof-of-concept studies, but was outweighed by the negative safety profile,[109,127–129] and in sarcoidosis and asthma, only marginal benefit was observed in formal phase II trials and development was discontinued.[123] In the remaining IMIDs evaluated (Table 2), Remicade showed no or only short-term clinical benefit. In all non-IMIDs studied, TNF blockade with Remicade proved ineffective or insufficiently effective to justify further clinical development.

In two instances, unexpected safety signals arose in clinical studies with Remicade. Despite preclinical evidence that TNF blockade improved an animal model of MS,[119] two patients with rapidly progressive MS treated with Remicade in a phase I safety trial experienced a transient increase in the number of gadolinium-enhancing lesions and other signs suggestive of immune activation and increased disease activity.[119] A similar worsening of symptoms was found in a double-blind placebo-controlled study in MS with another TNF inhibitor, lenercept,[149] and in clinical practice TNF inhibitors have been associated with cases of new onset and exacerbation of central and peripheral nervous system demyelinating disorders, such as optic neuritis and Guillain–Barré syndrome.[150]

In the second situation, preclinical and early clinical data suggested that TNF played an important role in the pathogenesis and progression of congestive heart failure (CHF). Yet in the phase II ATTACH study of 150 patients with stable class III or IV CHF, short-term TNF blockade with Remicade showed no clinical benefit, and high doses (10 mg/kg) were associated with an elevated risk of death or hospitalization.[29] Poor outcomes were also observed with etanercept in clinical trials of patients with CHF, confirming that TNF blockade is not an effective strategy in the treatment of moderate-to-severe CHF.[151]

What are the possible reasons for failure of TNF blockade?

Two possible explanations for the lack of demonstrated benefit of Remicade in these indications, both related to trial design, are that the dose or duration of treatment was not sufficient or that, as proof-of-concept studies, the trials were underpowered and unable to detect a benefit. However, given the general understanding of Remicade dosing, and the consistency of results across multiple trials with other TNF inhibitors, it seems more likely that TNF blockade is simply not the right treatment strategy in these diseases. But why not?

In the non-IMID indications, investigators identified two main possible explanations for lack of effect of TNF blockade. First, the inflammation in these diseases is possibly not driven by TNF, but rather the high production of TNF could be a downstream effect. Alternatively, the inflammation, even if TNF driven, is just one of several ongoing pathologies such that suppressing it does not have an impact on the disease as a whole.

It is less clear why TNF blockade works so effectively in some IMIDs with elevated TNF, but is ineffective or leads to worsening in others. It is possible that the timing of treatment with respect to disease course or the selected patient population was not optimal. Sarcoidosis, similar to CD, is both granulomatous in nature and mediated by Th1. Theoretically, TNF blockade should have been effective, yet the phase II trial showed only marginal benefit with Remicade. The investigators noted that one possible explanation for the trial's results is that it included patients with stable disease, which may have diminished a possible response to Remicade, owing to a lack of inflammation and/or high levels of fibrosis, which TNF blockade would not treat. An exploratory subgroup analysis revealed that patients with severe disease were more likely to benefit. Janssen subsequently conducted another phase II trial with a follow-up TNF inhibitor, golimumab (Simponi®; Janssen Biotech, Horsham, PA, USA), enrolling specifically this severe population, and yet again only marginal benefit was observed.[152] The sarcoidosis experience emphasizes the challenge of identifying a suitable population for a targeted treatment (eg, patients with TNF-driven disease) even when a sound understanding of the disease pathophysiology is present.

Another possible explanation for the lack of benefit in IMIDs treated with TNF blockade is that the ongoing inflammation is not TNF-driven, not solely TNF-driven, or not TNF-driven at each stage of disease, ie, where drivers of inflammation change over time or in different circumstances. It is known that the inflammation in IMIDs has different etiologies, mediated by Th1, Th2, and/or the more recently discovered Th17 responses. Elevated levels of TNF are associated with diseases thought to be driven by Th1 and/or Th17 responses, such as RA and CD. A number of the diseases where Remicade failed to work are thought to be Th2-mediated, including asthma (Janssen, data on file) and scleroderma,[125] where TNF, although elevated, is possibly not central to the underlying inflammation. In others, multiple pathways could be active. For instance, in view of the negative results with Remicade in Sjögren's syndrome[126] and atopic dermatitis,[108] investigators speculated that TNF blockade could have shifted the balance of Th1/Th2-mediated inflammation in favor of Th2. Whereas recent research has shown that some diseases, such as PsO and CD, can be effectively treated by blockade of cytokines elevated in either the Th1 or Th17 pathway,[35,40,153,154] others perhaps require blockade of both. One analysis, for instance, suggested that the inflammation in giant cell arteritis (GCA) is driven by cytokines from both the Th1 and Th17 pathways and successful treatment will require blockade of both.[155]

Several hypotheses have been proposed for worsening disease with TNF blockade. In the MS trials, investigators identified possible mechanisms by which TNF blockade could lead to further immune activation contributing to the disease's pathogenesis or to interruption of TNF-mediated tissue repair via TNFR2.[150,156] In CHF, disease worsening occurred despite decreases in both CRP and IL-6 with Remicade treatment. This led the investigators to propose that cytokine activation, including TNF, was beneficial, serving as part of the body's adaptive response to CHF, and that blocking it disrupted this response.[29]

It is clear that despite an improved understanding of the immune system, there are still many unknowns. The learnings from these trials have demonstrated that TNF's effect and, by extension, those of TNF blockade, are context driven and are difficult to predict. Remicade is effective in a number of IMIDs with a TNF-driven inflammatory component. In the other diseases where Remicade was studied, the results have provided useful insights into their pathophysiology and helped researchers in the search for new therapeutic targets.

Establishing the safety profile of Remicade

As Remicade was both the first TNF inhibitor and the first mAb to be used in chronic diseases, there was little precedent to draw upon, leaving researchers to hypothesize on its safety profile. Given the physiological role of TNF in host defense and immune surveillance, Remicade was expected to be associated with an increase in infections and, over the long term, malignancy, specifically lymphoma. As a foreign protein, Remicade also brought concerns of immunogenicity and consequent allergic and hypersensitivity reactions. Finally, as with any new drug, but in particular with this new form of targeted therapy, there were concerns about unforeseen risks.

The process of fully defining Remicade's safety profile took years and is still ongoing (Table 3). It has required Janssen to use a combination of data sources: phase II/III clinical trials, routine pharmacovigilance, postmarketing studies, large clinical databases, and independent research. Depending on the frequency of a given ADR, eg, common, uncommon, rare, and unexpected, different data sources and methods of analysis have been utilized. Several examples are described in this section to demonstrate how this was done.

What could the phase II/III program tell us?

The number of patients exposed to Remicade across the trials completed at the time of initial approval was not large (<200 patients in CD, approximately 500 across all clinical trials), yet based on this limited experience, the observed profile was aligned with expectations of TNF blockade. In Remicade-treated patients across all trials, ADAs were observed in 28.3% of patients. One or more infusion reactions occurred in 15.9% of patients (in 7.6% of infusions) (Janssen, data on file), most of which were mild to moderate in severity. Other than infusion reactions, allergic/hypersensitivity reactions were infrequent. Infections, including serious infections, occurred at a higher rate in patients treated with Remicade than with placebo (21.0% vs 11.0% for infections and 2.4% vs 1.8% for serious infections, respectively) (Janssen, data on file). Malignancies, including lymphomas, were observed, but were too infrequent to assess any possible association with Remicade (seven malignancies, of which five were lymphoid). One unexpected phenomenon, an increase in the risk of autoimmunity, was identified. In Remicade-treated patients, there was a net increase in new anti-nuclear

Table 3 Overview of Remicade's safety profile

Adverse event	Role of TNF/immune pathways
Acute and delayed hypersensitivity reactions	• Infused proteins generate acute infusion reactions via unclear mechanisms. Most are mild to moderate[45,157,158] • Allergic and (delayed) hypersensitivity reactions are also possible[45,157,158]
Serious infections, including opportunistic infections, TB, and hepatitis B reactivation	• Serious infections, including tuberculosis, bacterial infections, including sepsis and pneumonia, invasive fungal, viral, and other opportunistic infections have been observed in patients treated with TNF inhibitors[70,159,160] • TNF is critical for the clearance of intracellular pathogens[93] • Immune responses against viral pathogens can be also mediated by TNF[93] • Neutropenia may occur after TNF inhibitor administration, increasing risk of opportunistic infections[64] • TNF helps form and maintain granulomas in TB and induces apoptosis of TB-infected cells[161]
Malignancy, including lymphoma, leukemia, Merkel cell carcinoma, melanoma, cervical cancer, HSTCL, and pediatric malignancy	• Malignancy, especially lymphoma, is a known risk of immunosuppression[162] • Mechanistic studies have also shown that TNF has tumor-promoting potential under certain conditions[163] • Postmarketing surveillance suggests that there is relatively low risk of malignancy with TNF inhibitor treatment[55,164]
SLE and lupus-like syndrome	• Lupus-like syndrome has been observed in patients treated with TNF inhibitors[70] • TNF inhibition has been associated with the formation of anti-nuclear antibodies (ANA), anti-DNA antibodies, anticardiolipin antibodies, and antihistones[70] • Increased cell lysis in patients treated with TNF inhibitors may lead to exposure to self-antigens[165]
Hematologic reactions	• Pancytopenia, leucopenia, neutropenia, and thrombocytopenia have been reported in patients receiving TNF inhibitors[166]
Demyelinating disorders	• TNF inhibitors have been associated with cases of new onset or exacerbation of CNS demyelinating disorders, including multiple sclerosis, and peripheral demyelinating disorders, including Guillain-Barré syndrome[150] • The role of TNF in demyelinating disorders are still under investigation[150] • TNF has pleiotropic functions at different stages of autoimmune demyelination that may promote neuronal damage or potentially provide protective functions during CNS pathogenesis[150]
Congestive heart failure	• Clinical trial data evaluating TNF blockade as a treatment for heart failure have shown a worsening of disease in patients with NYHA class III-IV CHF[167] • There have been postmarketing reports of worsening and new-onset CHF in patients receiving TNF inhibitors[167] • Compromised myocytes express TNF on their membranes and TNF inhibitors might kill those cells through apoptosis or CDC[165]
Hepatobiliary events and hepatotoxicity	• In clinical trials, sporadic two- to three-fold liver function test elevations have been observed in patients treated with TNF inhibitors[166] • Isolated cases of hepatic failure have been reported in patients treated with TNF inhibitors[168] • Genetically susceptible individuals may generate an idiosyncratic (rare and unpredictable) immune response after inhibition of the TNF pathway[169]

Abbreviations: CDC, complement-dependent cytotoxicity; CHF, congestive heart failure; CNS, central nervous system; HSTCL, hepatosplenic T-cell lymphoma; NYHA, New York Heart Association; SLE, systemic lupus erythematosus; TB, tuberculosis; TNF, tumor necrosis factor.

antibodies (ANA) of 12% (from 24% to 36% of Remicade-treated patients), and anti-dsDNA antibodies developed in 9% of patients (from 0% to 9%). Isolated cases of (reversible) lupus-like syndrome were observed (Janssen, data on file). Viewed in the context of moderate-to-severe CD unresponsive to conventional therapies, this benefit–risk profile was viewed as positive, and Remicade received approval for CD.

As clinical development in additional indications proceeded, the phase II/III/IIIb trial database increased in size and had, by the end of development in 2016, grown to over 10,000 patients in more than 50 trials conducted across the globe in the six approved adult indications, and included pediatric populations in RA, CD, and UC (Janssen, data on file). While this was a much larger data set than was available at the time of initial approval, it was still not sufficient to fully establish Remicade's safety profile, a situation typical of clinical development programs. Clinical trials enroll a highly selected patient population and are not designed to detect rare safety events or events with long latency periods. To remedy this, manufacturers employ routine pharmacovigilance activities to monitor a drug's safety profile in clinical practice, the key part of which includes analysis of safety events reported to the company and in the medical literature.

What was the scale of the challenge of defining Remicade's safety profile? Common, uncommon, rare, and unexpected adverse events

Considering that a number of foreseeable risks needed further quantification and qualification, routine pharmacovigilance activities were not sufficient to define Remicade's emerging safety profile. For this purpose, postmarketing commitment (PMC) safety studies were agreed with or required by the health authorities for each new indication as it was granted. (In this manuscript, the term PMCs will be used collectively to refer to all studies agreed with or required by health authorities as a follow-up measure to provide additional data on safety or efficacy in the post-approval setting, known as postmarketing requirements [PMRs] and postmarketing commitments [PMCs] for the FDA, and postapproval measures [PAMs] for the EMA.)

The primary goals of the PMCprogram were to evaluate Remicade's long-term safety, specifically infections and malignancies, and its safety in vulnerable populations where it was expected to be used, specifically, pediatric patients and women exposed during pregnancy. The program was also to serve as a data source and hypothesis-generating tool for other possible adverse events.

A major consideration for the health authorities when determining the scope of the PMC program was the estimation of how broadly Remicade was to be used. It was indicated for six different diseases, which were serious but not generally regarded as life-threatening in nature. Moreover, their collective prevalence consisted of millions of patients. Given that the indicated diseases themselves differed in demographics, background safety risks, comorbidities, and conventional therapies, key safety questions would sometimes need to be evaluated separately by therapeutic area, ie, rheumatology, gastroenterology, and dermatology, and occasionally for each individual indication, ie, CD and UC. With the need to study Remicade in multiple diseases, as well as in demographically and geographically diverse populations, the PMC program needed to include tens of thousands of patients and would take years to execute.

The majority of the Remicade PMCs have sourced data from prospective, observational registries of specific diseases. Registries, while neither randomized nor containing the level of detail collected in controlled clinical trials, have the advantages of large size, long duration of patient treatment and follow-up, and inclusion of a broad population reflecting real-world use. Where registries already existed, Janssen initiated collaborations to meet its PMC requirements. When such independent initiatives were not sufficiently available, de novo disease registries were set up by Janssen and its commercial partners.

In total, the Remicade PMC program in approved indications consisted of seven company registries, 12 registries studies (ie, those based on analyses from independent registries), and three additional studies addressing specific safety topics (Table 4). Of the registries/registry studies, one included patients across all indications, seven included patients with rheumatic diseases, five were in IBD, including two pediatric registries, four were in PsO, and two evaluated Remicade in pregnancy across multiple indications. All seven company registries were designed and recruited by Janssen or its partners specifically to address Remicade PMCs. In general, the registry-based PMCs had two key design features: 1) they followed Remicade patients as well as comparator cohorts, including those receiving conventional therapies, and later, when

they became available, those exposed to other biologics; and 2) Janssen committed to long-term patient follow-up, ranging from 5 to 20 years. The three additional studies were designed specifically to evaluate the risk of hepatosplenic T-cell lymphoma (HSTCL) with Remicade.

To date, approximately 44,000 patients exposed to Remicade and 117,000 patients in the comparator cohorts have been included in the PMC program, a figure which does not include patients followed in local post-approval safety monitoring programs, such as those required in Japan. From the beginning of each PMC through study closure, health authorities worldwide receive comprehensive reports on a regular basis providing updated analyses of key safety risks to support the prescribing information. Several of these PMCs are still ongoing today.

How can registries inform us about common adverse events?

The major common adverse event to be studied in the PMC program was infection, including the subgroup of serious infections. TREAT, a US-based Janssen registry in CD started in 1999, is a good example of the scale and design needed for this purpose. Over 5 years it enrolled two cohorts, those receiving treatment with Remicade and those receiving conventional therapies, and followed them until it was closed in 2012. It was the largest registry in IBD at the time, enrolling more than 6,000 patients with a median follow-up time of 6.36 years.[43]

Importantly, TREAT served as a data source also for studying the risks in conventional treatments. At the time of initiation of the program, thorough understanding of the risk of serious infection with conventional medications (specifically corticosteroids, analgesics, and the immunosuppressants thiopurines and MTX) was lacking. It was necessary in the Remicade PMC registries to gain an understanding of the background risks of these conventional agents as Remicade itself, used mostly after or in combination with these therapies, could not be judged in the absence of such knowledge. Similar understanding on the interactions between certain disease characteristics, such as severity and the risk of infection, was also required to understand the risks of Remicade and was also obtained from TREAT.

Analyses in TREAT confirmed the increased risk of serious infections with Remicade observed in the phase II/III program (unadjusted rates: 2.04 and 1.00 per 100 patient-years for Remicade and conventional therapies, respectively; adjusted HR=1.43, 95% CI 1.11 to 1.84, P=0.006).[171] Further analysis revealed that other significant predictors of serious infection were older age, use of prednisone, narcotic analgesics, moderate/severe disease, colonic disease, and disease duration at enrollment. The ENCORE and OPUS PMC registries in Europe for CD and UC, respectively, yielded confirmatory results to these findings and showed that results were generalizable for patients treated in clinical practice across geographic borders.[47,48]

In rheumatology, data from several biologics registries in the USA and Europe were published indicating a similar association between TNF inhibitors and serious infection risk to that found in CD,[172,173] with similar additional risk factors for serious infection such as disease severity. It was also established that there is a time-dependent increase in serious infection risk, where the maximum risk is reached within the first 6 months of therapy, with a gradual decline thereafter.[159,174,175]

Can registries inform us about uncommon events?

TREAT also demonstrated how registries can be used to better characterize the risk of uncommon events, for example lymphoma, for which they are often not adequately powered despite their size and duration. During the 13 active years of TREAT, just 15 cases of lymphoma were reported, evenly distributed between the Remicade and conventional therapy cohorts.[43] Owing to this limited number of cases, predictors associated with the risk of lymphoma could not be further estimated in regression models. This low rate of lymphoma was also an occurrence in registries across the other indications.[48,55,175–178] Although an increased risk in patients treated with Remicade could not be excluded with these limited numbers, they suggested that there was a relatively low rate of lymphoma with TNF blockade, and that this rate did not differ from that observed with conventional therapies or from the background rate in these diseases. Additional studies, especially meta-analyses including population-wide data, suggested that an increased risk is associated with profound persistent immunosuppression, eg, combination therapy with thiopurines and TNF inhibitors, and with cumulative disease activity.[162,179–181]

Can big data play a role in evaluating uncommon safety risks?

To establish an association between treatment and an uncommon event such as lymphoma, much larger sample sizes are needed than can be found in most registries. After 20 years on the market, the number of patients treated with TNF inhibitors as a class is large enough and technology has improved enough to enable analyses with the power necessary for low-frequency events. Lemaitre et al published a study from the French National Health Insurance Database (SNIIRAM) evaluating the incidence of lymphoma among 189,000 IBD patients with median follow-up of 6.7 years.[182] In this study, 336 patients had claims for lymphoma, which was sufficient for statistical analysis. The lymphoma incidence rate was found to be 0.26 per 1,000 person-years in IBD patients exposed to neither TNF inhibitors nor thiopurines, 0.54 in patients exposed to thiopurines, 0.41 in patients exposed to TNF inhibitors, and 0.95 in patients exposed to combination therapy. Adjusted HRs were 2.6 for thiopurines, 2.41 for TNF inhibitors, and 6.11 for the combination, relative to those unexposed to these drugs, all of which were statistically significant. As this study was based on administrative databases, clinical information, such as disease activity, smoking history, disease phenotype, and information on inflammatory burden, was not available to the authors, and the relative role of these risk factors could not be determined.

An analysis of similar size was also conducted in RA. Eleven biologics registries participated in a collaborative project to investigate the risk of malignancy, including lymphoma, associated with use of TNF inhibitors in RA.[55] Among 124,997 patients, 533 lymphomas were reported. Consistent with smaller analyses that did not suggest an increased risk of lymphoma with TNF inhibition or other treatments over and above the elevated risk already present in patients with active RA,[175–177] this large, multiregistry study confirmed comparable crude lymphoma rates across treatment cohorts and showed further that lymphoma subtype distribution was similar in biologic-naïve patients with RA and those treated with TNF inhibitors.[55]

How have PMCs continued to evolve?

Janssen's registries initiated later in Remicade's life cycle benefited from learnings from the early experience. An example of this is PSOLAR, begun in 2007 as a PMC for Remicade in psoriasis. Enrollment in the Remicade cohort was ended in 2013 and by which time this registry had enrolled over 12,000 patients with psoriasis. Going beyond TREAT, PSOLAR was a disease-based registry, allowing all patients with comparable psoriatic disease to enter, irrespective of treatment status.[49] Where TREAT could not include patients receiving other biologics because none was available at the time, PSOLAR included other TNF inhibitors and, later, other new biologic classes. Further, PSOLAR provided external validity and generalizability as the participating sites represented a mix of community-based, academic, and/or hospital-affiliated practices from around the globe. It also included formal sample size calculations permitting signal detection of adverse events, whereby hypotheses could be generated for later analyses. Lastly, Janssen took measures to ensure the objectivity and transparency of PSOLAR. In contrast to registries of academic or professional organizations, whose independence was implied, possible bias introduced by Janssen's conflicts of interest was a concern with its company-owned registries. To address this, PSOLAR enlisted from inception a formal steering committee with leaders in their respective fields, whose role was to ensure that the integrity of the registry would be maintained by reviewing, approving, and monitoring research projects, and by driving the interpretation and dissemination of results. Strict publication rules were stipulated in advance, chief among them having independent experts as leading authors.

PMCs evaluating long-term safety in special (vulnerable) populations require unique design considerations. To evaluate the risk of malignancy in pediatric patients with IBD, Janssen designed the global DEVELOP registry, where children treated with Remicade or other therapies were enrolled and are being followed for 20 years.[50] Achieving this length of follow-up requires extensive patient retention efforts owing to administrative and healthcare system challenges. For instance, at the age of 18, registry participants transition from pediatric care under the supervision of DEVELOP investigators to adult care by clinicians not involved in the registry. Similarly, in some countries, a lack of a personal identifier makes tracking patients across different healthcare providers over time difficult. Yet these efforts have served their purpose. An interim analysis from DEVELOP published in 2017, based on 5,766 patients with a median follow-up time of 4.7 years, indicated that Remicade therapy was not associated with an increased risk of malignancy compared

with a matched general population.[50] The data further demonstrated a trend toward an increased risk of malignancy in thiopurine-exposed patients, irrespective of biologic exposure, reinforcing findings from other independent research efforts in adults.[162,179]

Setting up a pregnancy registry with sufficient power to detect possible safety signals posed particular challenges and required an innovative approach to address. After review of existing databases and discussion with experts, Janssen learned that in the Nordic countries, government-held nationwide healthcare databases, including complete birth registries, could be linked to the local biologics registries. Working with data access providers in Sweden, Denmark, and Finland, Janssen was able to design a study which accrued patients starting from 2000. After 10 years, it had finally accrued enough women exposed to Remicade during pregnancy for a meaningful analysis. The national databases included a total of 2,155,535 births collected between 2000 and 2013, from which the outcomes of 270 births in women exposed to Remicade during pregnancy could be compared with 906 births in women exposed to other TNF inhibitors, 6,460 births in women with similar diseases exposed to non-biologic conventional treatments, and births in the general population.[44] Additional information on the infants born to these women was collected during their first year of life.

The study found that exposure to Remicade was not associated with increased rates of congenital anomalies or infant death, the most relevant medical outcomes of interest to health authorities. Remicade in combination with conventional immunosuppressive treatments was associated with other adverse birth outcomes (eg, low birth weight). However, this was not observed with Remicade monotherapy. The potential contribution of exposure versus severity of underlying disease in these outcomes remains unclear.

Janssen's first experience with combining and linking population-based databases established a proof of principle and led to other, similar collaborations for Remicade (Table 4) (NPTR, HSTCL-Kaiser Permanente) and other drugs in its portfolio (Janssen, data on file).[183]

How can rare and unexpected events be detected?

Perhaps the biggest challenge to establishing the safety profile of a drug is the detection of rare and idiosyncratic safety events. Even large databases are not of sufficient size to detect, analyze, or quantify such events, so special methods are needed. Janssen, like all pharmaceutical companies, relies on healthcare professionals to report to the company any ADRs occurring in patients treated with their drugs (known as spontaneous reporting). When the company identifies a possible safety signal, a full investigation is triggered. This includes trending analyses of events reported to the company over time (itself a complex process requiring accurate estimates of patients exposed to the drug by indication, age, geography, etc, for which Remicade demanded special methods), disproportionality analyses comparing rates with Remicade with rates observed across all other drugs in the company safety database, detailed clinical follow-up on each case report, a literature review of the adverse event, analyses from the clinical trial database and PMC registries, and consultation with experts. If necessary, mechanistic and preclinical studies to help understand the observation are also conducted. Finally, regular communication with health authorities is required.

A well-known example of signal detection from spontaneous reports is that of tuberculosis (TB) in patients treated with Remicade. Both the phase II/III trials and the PMCs included sites located primarily in North America and Western Europe, and enrolled a population of patients at relatively low risk of being exposed to TB. In 2000, once use of Remicade in clinical practice started to grow and included patients from a broad geographic area, Janssen began receiving spontaneous reports of disseminated TB in patients treated with Remicade.[22,23,160] The company's ensuing investigation found independent research ongoing at that time, which revealed a role of TNF in maintaining granulomas, which are responsible for sequestration of *Mycobacterium tuberculosis* and sustaining latency of disease, and in the induction of apoptosis of TB-infected cells. Inhibition of TNF disrupts these immune responses and likely leads to breakdown of granulomas and reactivation of latent TB infections.[184]

Perhaps the most prominent example of detecting a rare adverse event with Remicade is that of HSTCL, a very rare and usually fatal form of lymphoma. It occurs predominantly in adolescent and young males, in whom widespread use of Remicade began only with its approval in pediatric CD in 2006. After several cases were reported,[36] Janssen committed to monitoring its various data sources, including the PMC registries, for additional cases. However, given the rarity of HSTCL and its occurrence in a specific, small subgroup of patients, no cases were found in the existing

registries and it was unlikely that many would be found in the future. The company then agreed with health authorities to conduct three PMCs specifically for the study of HSTCL: 1) an analysis to calculate the incidence of HSTCL in IBD using the claims databases of Kaiser Permanente, a US health insurance company[60] 2) a study of the incidence and prevalence of HSTCL in the general population and in IMIDs using PALGA, a nationwide network and registry of histopathology and cytopathology centers in the Netherlands[59] and 3) a Janssen study to collect samples from IBD patients diagnosed with HSTCL to identify biomarkers that may allow earlier identification of a patient's risk of developing HSTCL. After extensive review of each case of HSTCL in IBD patients both with and without treatment with Remicade identified in Janssen's global safety database, the FDA's MedWatch system, and the medical literature, analysis showed that nearly all cases occurred in patients treated either with thiopurines only or with a combination of TNF blockade and thiopurines, with few cases in patients receiving TNF inhibitor monotherapy.[36,60] The Remicade prescribing information was updated accordingly to warn prescribers of the possible risk.

As with the examples of lymphoma and pregnancy, the HSTCL experience demonstrated the challenges of identifying sufficient cases of rare and even low-frequency events despite routine pharmacovigilance activities and a PMC program comprised of studies with both large populations and long-term follow-up. Combined with a lack of information on possible confounding factors, there are limits to the ability to draw firm conclusions from these data sources on the quantitative (eg, incidence rates) and qualitative (eg, event subtypes, predictors, latency, severity) aspects of these risks. Nevertheless, the Remicade postmarketing safety program has provided and continues to provide essential information needed to assess the risk profile of Remicade, and has confirmed the overall positive benefit–risk balance originally observed in the clinical development program.

What has Remicade's safety profile taught us about the physiological role of TNF and the effects of TNF blockade?

The profile of safety events associated with TNF blockade has been of great interest to researchers from an immunological perspective. Commonly compared with conventional immunosuppression, TNF blockade differs from it mechanistically. Where immunosuppressants prevent activation and proliferation of lymphocytes, TNF inhibitors, by virtue of blocking a single cytokine, are a targeted approach to modulating immune responses and therefore are not broadly immunosuppressive.[93,94] While its safety profile is similar to that of conventional immunosuppressants, specific blockade of TNF does not have the off-target effects of many immunosuppressants or steroids, nor is there evidence of cumulative toxicity with TNF blockade.[66,185] It is noteworthy that blockade of a cytokine so central to host defense can be blocked without a greater and broader risk of adverse effects.

The study of Remicade has confirmed and refined much of what was known about TNF. It plays a complex role in innate immunity, particularly against mycobacterial, invasive fungal, and (other) intracellular infections, and, not surprisingly, its blockade is associated with a small increase in these and other opportunistic infections.[93] Similarly, reports of reactivation of hepatitis B infections confirm the role of TNF in the immune response against certain viral pathogens.

Less clear is the extent of effect that TNF inhibitors have on immune surveillance against malignancies, including lymphomas. Whereas data from large registries of patients with RA (see Table 4) indicate that disease activity, rather than TNF antagonism, is likely to be responsible for the observed increased risk of lymphoma, data from large IBD studies[182] suggest a possible increase, albeit small, associated with TNF blockade. Specific malignancies, such as Merkel cell carcinoma, melanoma, and leukemia, have also been associated with TNF blockade. Investigation on these and other malignancies continues.

Use of TNF blockade has also led to an unexpected finding, paradoxical adverse events, defined as the occurrence of a pathological condition that usually responds to a drug. For example, TNF inhibitors are effective in psoriasis, yet psoriatic skin lesions have been reported as an adverse event following TNF inhibitor treatment for other conditions.[186] The mechanism of this is unclear, but one hypothesis posits that inhibiting TNF may, in certain settings, increase the production of other cytokines, such as interferons and IL-17s, underlying the role of alternative inflammatory pathways in the pathogenesis of these diseases.[186] Another line of investigation suggests that TNF blockade could lead to the downregulation of T-regulatory cells which would normally modulate TNF-driven inflammation.[187,188] It is a fascinating observation and yet another example of the use of TNF blockade bringing new insights to our understanding of the immune system.

Once identified, how are safety risks to be mitigated?

The final step in the risk-management process consists of the actions a company should take to mitigate safety risks once they have been identified. Routine measures include updating the product's prescribing information with a warning and description of the event, and inclusion in the company's standard medical information, educational, and promotional materials. When these measures are insufficient, a manufacturer can implement additional risk mitigation activities. In the case of Remicade, several risks have led to the need for such extra measures. An example is the risk of mycobacterial and invasive fungal infections, where cases of delayed or missed diagnoses were still occurring in TNF inhibitor-treated patients despite routine risk-mitigation measures. In response, Janssen implemented a global educational program on the risk of these infections. In the USA, this took the form of a formal Risk Evaluation and Mitigation Strategy, as per FDA requirements, where communication and education tools for physicians were developed and deployed emphasizing the importance of maintaining a high index of suspicion for opportunistic infections in Remicade-treated patients, the need for screening measures and possible pretreatment, and how these infections should be managed. In Europe, Janssen and its partners were required not only to implement educational activities, but also to demonstrate their effectiveness by evaluating levels of awareness among physicians of the risks and how to reduce them. There were also educational efforts aimed at patients, the most important of which was a reminder card to be given at the beginning of therapy notifying them of specific risks and the need to inform all healthcare providers responsible for their care that they are on Remicade. After review of the outcomes of these programs and consultation with the health authorities, the formal requirements of the additional measures have been fulfilled and Janssen continues routine activities to this day.

Changes in treatment paradigms due to the advent of TNF blockade

Therapeutic advances often lead to changes in treatment paradigms. In the case of TNF inhibitors, the impact was extensive as it occurred across several relatively common diseases which are chronic, progressive, and often accompanied by disability and severe comorbidities, and where standard treatments had remained unchanged for years. The breakthrough of Remicade and other TNF inhibitors set off a revolution, leading to a reassessment of conventional therapies, changes in treatment goals and new treatment strategies. These paradigm shifts occurred in parallel across indications, as the learnings from one informed the others.

When Remicade first became available, its use was limited to patients who had failed conventional therapies. Clinical experience confirmed the efficacy observed in the phase II/III trials and clinicians soon learned how to optimize the results further. Better patient management methods mitigated safety risks such as infusion reactions and infections.[157,158,189,190] By treating the underlying pathophysiology of disease, TNF blockade offered the possibility of treating multiple manifestations with a single therapy. Many patients could be treated for years at a time, with both sustained response and an acceptable tolerability,[66,185] a welcome departure from standard treatments.[191,192]

Within a few years, the positive experience with Remicade in clinical practice led researchers to ask several questions about expanding its use. If treatment stops structural damage and avoids long-term, irreversible sequelae of disease, why wait until the structural damage is manifest before using it? Would treating early, perhaps even as an alternative to conventional treatments, avoid the damage in the first place?

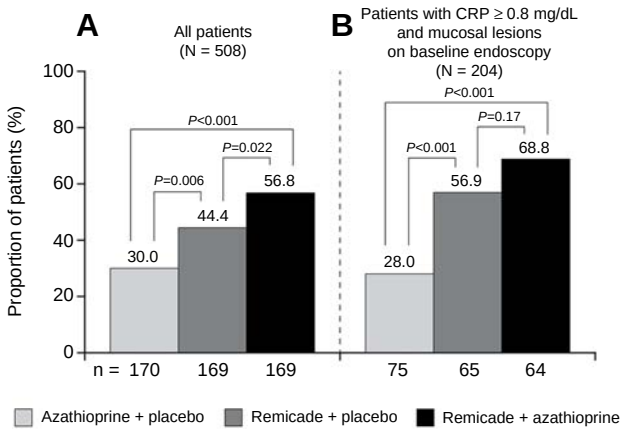

Figure 6 SONIC trial: primary endpoint (steroid-free remission) at week 26 in (**A**) all patients and (**B**) patients with elevated CRP (≥0.8 mg/dL) and mucosal lesions at baseline. **(A)** From Colombel JF, Sandborn WJ, Reinisch W, et al. Abbreviation: CRP, C-reactive protein.

Could TNF blockade be used earlier in the disease course?

IBD

In CD, initial studies exploring the use of Remicade in patients early in the course of disease were conducted by independent investigators. GETAID, a French IBD study group, investigated Remicade in steroid-refractory patients and D'Haens et al conducted the Step-up-Top-down study evaluating Remicade in early CD.[193,194] Both studies suggested that early use may be beneficial, and led to SONIC, a Janssen-sponsored phase III study, which compared Remicade with the standard maintenance treatment in CD, azathioprine (AZA, a thiopurine), rather than testing its effect where this treatment had failed.[40]

In SONIC, CD patients naïve to AZA and early in the course of disease (median duration of disease 2.4 years) were randomized to one of three treatment arms: AZA alone, Remicade alone, and the combination of AZA and Remicade. The primary endpoint was the new gold standard of efficacy, corticosteroid-free clinical remission at week 26, and was achieved in 30.0% of patients receiving AZA alone, 44.4% of patients receiving Remicade alone (P=0.006), and 56.8% of patients receiving the combination (P<0.001) (Figure 6). Importantly, endoscopic assessment of the healing of mucosal lesions demonstrated a similar pattern of results across the three groups. The incidence of ADA was lower in the combination group (0.9%) compared with Remicade alone (14.6%), consistent with that observed with the combination of Remicade and MTX in RA. Safety was comparable in all three groups. These results showing the superiority of both Remicade regimens versus AZA triggered a reassessment of the use and timing of not only TNF blockade but also AZA in CD.

A study of similar design in UC, UC-SUCCESS, showed comparable results.[195] The researchers explored whether Remicade, either as monotherapy or in combination with AZA, was superior to AZA alone in patients who were failing corticosteroids and naïve to AZA. The combination was superior to either agent alone for induction of steroid-free remission at week 16, the primary endpoint, and resulted in greater improvement in quality of life of UC patients. Remicade, both as monotherapy and in combination with AZA, was more likely to achieve a clinical response and mucosal healing than in those treated with AZA alone.[195] Remicade was also assessed as an alternative to standard therapies, intravenous steroids and cyclosporine, in the management of severe, acute UC, an emergent, life-threatening form of the disease usually resulting in colectomy. Remicade proved to be better than intravenous steroids[196] and equal to cyclosporine[197] at avoiding colectomy, but with the benefits of improved tolerability, ease of use, and the possibility of use as a maintenance therapy.

Rheumatology indications

In RA, the exploration of earlier use followed a similar trajectory. The first signal that Remicade could be used early in the course of disease was from an ATTRACT subgroup analysis of patients with shorter duration of disease (<3 years) and therefore lower baseline levels of joint damage than the trial's full population. Results suggested that Remicade provided long-term benefits in this subgroup by preventing radiographic progression and preserving joint integrity,[198] and supported the hypothesis of a window of opportunity to avoid joint damage early in the disease, after which it would appear and begin to impair normal function.[199–201]

This analysis led to ASPIRE, a phase III trial to assess formally the use of Remicade in patients with severely active RA naïve to MTX and disease duration <3 years, in which patients were randomized to either MTX alone or MTX in combination with Remicade for 1 year.[30,202] This trial demonstrated that the combination provided both clinical and structural benefits early in the course of disease compared to MTX alone. A similar trial, RESPOND, was performed with Remicade in patients with PsA and who were naïve to MTX, helping to establish the efficacy of early use of TNF blockade in that disease as well.[41]

Earlier use of TNF blockade in AS was explored in another independent study from Barkham et al, where patients with very early inflammatory back pain (indicative of future AS) were randomized to Remicade or placebo.[39] Compared with placebo at week 20, patients receiving Remicade had a greater reduction in inflammatory lesions, as measured by total MRI score, and better scores on clinical and patient-reported outcomes. This was the first study to show that TNF blockade was effective for early sacroiliitis or "preradiographic" axial spondyloarthritis (axSpA), ie, without structural damage on X-ray and therefore not (yet) AS.

Although the results from these trials were positive, there were several reasons not to implement earlier use of TNF blockade. While generally well tolerated, it is not risk free and its use in larger populations with earlier, possibly milder forms of disease raised questions about the balance of benefits versus risks. Moreover, less costly conventional

therapies, while perhaps inferior to TNF blockade, were still effective drugs, particularly in RA and psoriasis, where the benefits of MTX, for example, are substantial. Clinicians then asked two questions, the answers to which might guide decisions on early use of TNF blockade. Were there predictors of response which might help to identify the subgroups of patients most likely to need and to benefit from early TNF blockade (eg, patients at high risk of rapid progression) or not likely to respond to TNF blockade at all? Had conventional therapies and treatment strategies been optimized or was there still room to improve them?

Are there predictors of response which can identify patients who will benefit from (early) treatment with TNF inhibition? Are there predictors of lack or loss of response?

Predictors of response

SONIC was relevant not only because it identified the optimal maintenance therapy for early symptomatic control, but also because of its implications in the context of CD as a progressive disease, where early suppression of the underlying inflammation could lead to avoidance of permanent structural bowel damage characteristic of its later stages. Subgroup analyses from SONIC revealed that patients with objective signs of inflammation at baseline, specifically mucosal lesions and/or elevated levels of CRP, had relatively greater benefit of therapy compared with the trial population as a whole. In the subgroup with both characteristics, 69% of patients receiving combination therapy were in steroid-free remission at week 26 (Figure 6).[86] This confirmed that it was now possible not only to identify but also to treat patients at early risk of progression due to inflammation.

In early RA, an analysis from ASPIRE evaluated a range of baseline patient characteristics and found that swollen joint counts, rheumatoid factor positivity, and increased serum markers of inflammation (erythrocyte sedimentation rate [ESR] and/or CRP) were all predictors of both disease progression and response to TNF blockade. Visual matrices based on these parameters were then developed to identify populations at high risk of rapid radiographic progression (Figure 7). In the trial, these patients were unlikely to respond to MTX alone, but benefited from its use combined with Remicade.[203] ASPIRE was helpful in understanding when MTX alone was sufficient and when early combination therapy was warranted.

The Barkham study in axSpA had shown that early sacroiliitis could be treated before substantial damage to the spine had occurred, providing an impetus for early use

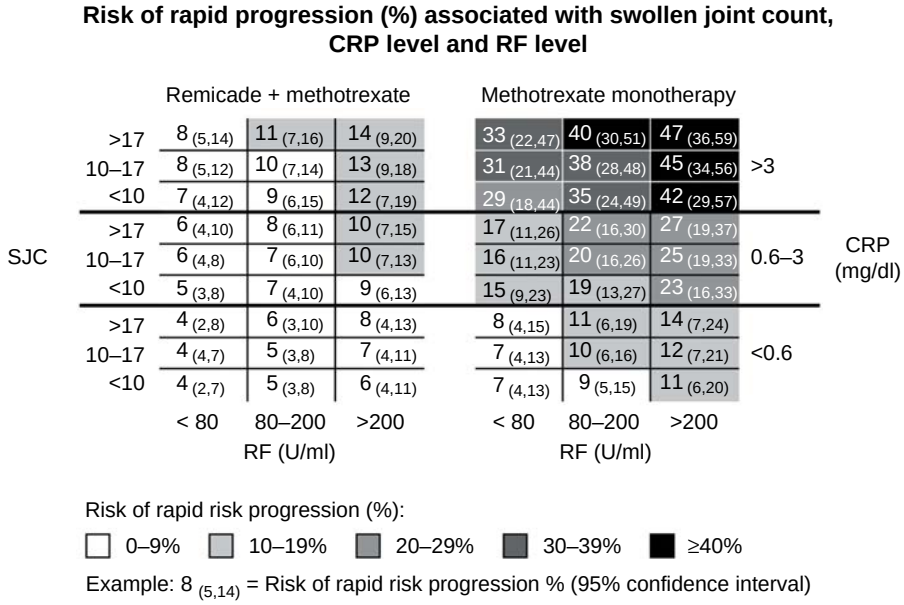

Figure 7 Prediction model of rapid radiographic progression in RA: matrix model from the ASPIRE trial in MTX-naïve, early RA. Rapid progression was defined as a threshold change in modified Sharp/van der Heijde (SHS) score of ≥5 units/year. From Vastesaeger N, Xu S, Aletaha D, et al. A pilot risk model for the prediction of rapid radiographic progression in rheumatoid arthritis. *Rheumatology.* 2009;48(9):1114–1121. doi:10.1093/rheumatology/kep155. of TNF blockade.[39] However, for this early use to be practical, there was a need for better differential diagnosis of axSpA from other causes of back pain. Research found that patients with back pain >3 months beginning before the age of 45 years in the presence of human leukocyte antigen-B27 positivity or sacroiliitis combined with typical features of SpA (eg, extraspinal manifestations, response to NSAIDs, family history) were likely to develop axSpA. This led to the formal definition of a new disease entity, non-radiographic axial spondyloarthritis (nr-axSpA), now recognized for clinical trial purposes and by health authorities as a new indication.[204,205] In the case of AS, therefore, the option to treat early with TNF inhibitors had led to a fundamental reassessment of disease.

Possible reasons for lack or loss of response

As efficacious as TNF blockade is, not all patients respond and many patients who do will lose their response over time. In Remicade clinical trials across all indications, as well as in trials of other TNF inhibitors, 20–40% of patients did not respond to induction therapy (primary non-response) (Figure 4), and in clinical use another 5–15% have been observed to lose response annually thereafter (secondary non-response).[206,207] Considerable effort has gone into understanding and predicting non-response in the hope of further optimizing therapy with Remicade and other TNF inhibitors.

Causes for this treatment failure generally fall into two categories.[208] The first is insufficient dosing. This can be due to several reasons, such as fast drug clearance, high inflammatory burden, and ADAs, and can frequently be resolved with dose escalation.[81,82,209] To identify possible underdosing, both monitoring of serum drug levels and ADA testing have become common in the management of patients on TNF inhibitors, particularly in IBD.[210–212]

The second cause of lack or loss of response is more interesting from a pathophysiological perspective, and more difficult to address: the inflammation behind the disease in these patients is perhaps not (or not consistently) driven by TNF. In IBD, for example, the European Crohn's and Colitis Organisation (ECCO), a leading professional organization in the field, held a workshop on reasons for failure of TNF inhibition and hypothesized that TNF-independent (or not fully dependent) pathways may be involved in inflammation or that TNF blockade even induces or promotes pro-inflammatory pathways, reminiscent of the reasons for the failure of TNF blockade in other diseases or for paradoxical adverse events.[213] New agents targeting different inflammatory mediators have already proven to be effective, including specifically in patients who do not respond to or have lost response to TNF inhibition, such as inhibitors of IL-12/23 and integrin-α4β7 in IBD,[212,214] of IL-6, T-cells, and B-cells in RA,[215,216] and of IL-17 and IL-23 in psoriasis.[153,217] Independent studies aimed at identifying predictors of response to TNF inhibition have evaluated a wide range of genetic, serum protein, or transcriptomic markers. Several potential predictors of response have been identified and may be helpful for guiding clinical decision in the future.[218,219]

Had conventional therapies been fully optimized? Treatment strategy trials in RA and CD

The availability of highly efficacious TNF inhibitors for RA renewed interest among rheumatologists in optimizing csDMARDs, alone or in combination, and the use of accelerated step-up therapy when they were not working. Confident in the knowledge that treatment alternatives with biologics existed if conventional therapies failed, physicians now monitored patients frequently in the expectation of high levels of efficacy, a practice known as “tight control”, and moved on to the next line of therapy if their treatment goal had not been met (and reduced treatment if it had), a practice now known as “treat-to-target”.[220–222] The question at hand was which of the various treatment strategies available, now including TNF inhibitors, was most likely to treat RA patients successfully?

This question was answered with the BeSt trial, an independent study conducted in the Netherlands, whose elegant design compared the safety and efficacy of the key therapeutic strategies in RA available to rheumatologists.[223] BeSt was a 10-year, multicenter clinical trial of csDMARD- and TNF inhibitor-naïve, early (≤2 years) RA patients randomized to one of four treatment strategies: sequential csDMARD monotherapy (group 1), step-up csDMARD combination therapy (group 2), initial csDMARD combination therapy with tapered high-dose prednisone (group 3), and initial combination therapy of Remicade plus MTX (group 4). Patients were assessed every 3 months, “tight control”, and treatment was adjusted according to a predefined treatment progression in each arm based on the ability to achieve low disease activity (LDA), a score ≤2.4 on the RA Disease Activity Score (DAS), “treat-to-target”. The overall objective of the study was to compare a step-up

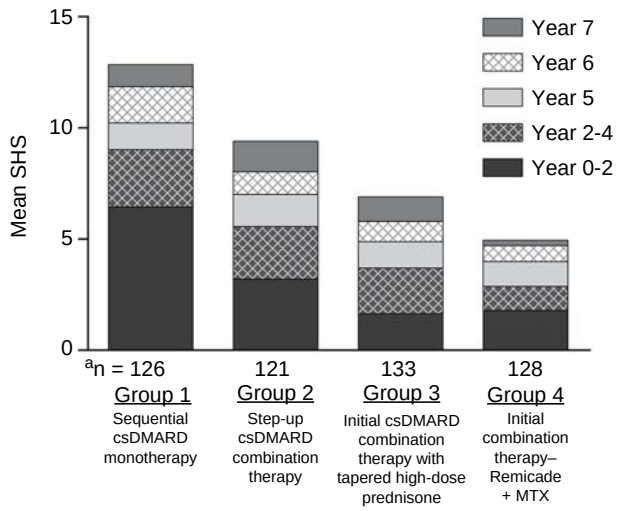

Figure 8 Cumulative progression of joint damage through year 7 in BeSt. Reproduced with permission from Van den Broek M, Lems WF, Allaart CF. BeSt practice: the success of early-targeted treatment in rheumatoid arthritis. *Clin Exp Rheumatol*. 30(4 Suppl 73):S35–S38. Copyright © 2012 *Clinical and Experimental Rheumatology SAS*.[225] [a]Sample size represents the population originally randomized to each arm. Numbers of patients at the end of each year of follow-up differed.
Abbreviations: csDMARD, conventional synthetic disease-modifying anti-rheumatic drug; MTX, methotrexate; SHS, Sharp/van der Heijde score.

approach (groups 1 and 2) with an aggressive approach (groups 3 and 4). Of note, groups 1, 2, and 3 could also receive Remicade plus MTX at some point during follow-up via progression to later steps of treatment if LDA was not achieved. Patients in group 4 could stop Remicade and even MTX if certain LDA and remission targets were achieved and sustained.[223,224]

At the end of year 1, mean scores on the Health Assessment Questionnaire (HAQ) were better with early aggressive treatment compared to the early step-up approach (P=0.009). Median increases in total radiographic joint score were higher in groups 1 and 2 than in groups 3 and 4 (P<0.001) and lowest of all in group 4, with no significant differences in adverse event or withdrawal rates among groups.[223] Annual assessments during the trial revealed how graduation to the next steps in the treatment algorithm based on achieving LDA or not led to smaller amounts of joint progression each successive year, highlighting the possibility of avoiding such damage by the use of an aggressive strategy early in the treatment timeline (Figure 8).[225]

After a decade of a treat-to-target approach in the BeSt study, radiographic progression remained low in all arms (mean increase in SHS at year 10 was estimated to be 14.2, 14.1, 14.6, and 8.9 in groups 1 to 4, respectively, P=0.046 for group 1 vs group 4) and functional ability approached normality for all groups (mean HAQ 0.6). Patients originally randomized to the combination of Remicade plus MTX (group 4) had the lowest structural damage and disability rates[61] and the lowest need to progress in the assigned treatment algorithm. Early aggressive treatment in groups 3 and 4 was not associated with worse safety outcomes, probably due to the overall improvement of symptoms of disease. The rate of mortality in the trial across all four arms was not increased compared with the normal population, which was unexpected for this disease and possibly related to effective suppression of inflammation. This unique study of treatment strategies in patients with early RA showed that a tight-control, treat-to-target approach prevents long-term progression of structural damage and disability, and that an early aggressive approach leads to better results than an early step-up approach.

In IBD, gastroenterologists asked questions similar to those asked in BeSt. Beyond SONIC and UC-SUCCESS, several trials of TNF inhibitors have investigated a variety of treatment strategies, including accelerated step-up therapy versus conventional treatment strategies (Step Up, Top Down, REACT),[194,226] managing patients based on clinical symptoms alone or serum levels of drug (TAXIT, TAILORIX),[227,228] basing treatment decisions on symptoms alone or in combination with objective markers of disease, such as fecal calprotectin (FCal) and CRP (CALM),[229] and how best to prevent recurrence post-surgery (PREVENT, POCER).[42,230] The results of these trials and others have led to conclusions parallel to those drawn from BeSt.

How has TNF blockade influenced treatment guidelines and health authority requirements for next-generation drugs?

Many of the changes in practice patterns made as a result of the use of TNF inhibitors have become standard and can be found in the treatment guidelines for each of their indicated diseases (Table 5). Across several leading professional organizations in IBD, such as ECCO and the American College of Gastroenterology (ACG),[212,214,252] CD and UC are recognized to be progressive diseases leading to irreversible damage in a substantial number of patients, driven in large part by inflammation that can be suppressed with TNF blockade. Goals of therapy are now steroid-free remission, rather than clinical response, and should include reductions in objective measures of inflammation, such as CRP and FCal, healing of the inflamed mucosa,[253] and ultimately, improved quality of life. Moreover, physicians should evaluate patients individually and frequently, stratify by risk, and take a proactive approach to achieving treatment goals. Should these goals not be met within designated times, eg, 6 months, then the treatment should be optimized.[232,254] Use of steroids should be limited and monotherapy with azathioprine is now discouraged.[255]

Table 5 Changes in treatment practices in the TNF era

Pre-biologics era	Biologics era
IBD[211,231–235]	
• Reactive disease management with intermittent monitoring	• Proactive, treat-to-target disease management with tight monitoring and shared patient/physician decision-making
• Symptomatic control with five ASAs, antibiotics, antidiarrheals, and narcotics; corticosteroids and thiopurines used as standard of care	• Steroid sparing strategy; avoidance of narcotics; avoidance of thiopurine monotherapy • Use of TNF inhibitors and other targeted therapies upon failure of first-line therapy
• No individualized treatment approach	• Individualized treatment approach considering patient characteristics, disease severity, prognostic factors, biomarkers, comorbidities, and therapeutic drug monitoring
• Treatment goals: ○ Induction/maintenance of clinical response ○ Suppression of disease-progression and bowel damage not addressed ○ Improvement in QoL and other PROs only secondary	• Treatment goals ○ Clinical, biologic (eg, CRP, FCal), and endoscopic remission ○ Prevention of irreversible bowel damage and long-term disability ○ Normalization of QoL and PROs ○ Comorbidities managed or avoided
RA,[215,216,236,237] **AS,**[238,239] **PsA**[240–243]	
• Reactive disease management with intermittent monitoring; symptomatic control (not using composite disease activity measures)	• Proactive, treat-to-target disease management with tight monitoring using of composite disease activity measures and shared patient/physician decision-making
• Corticosteroids, NSAIDs, and csDMARDs used as standard of care	• Early aggressive use of NSAIDS (AS) or csDMARDs with short-term corticosteroids (RA, PsA) • Use of TNF inhibitors and other targeted therapies upon failure of first-line therapy • Treatment tapering upon sustained remission
• No individualized treatment approach	• Individualized treatment approach considering patient characteristics, disease severity, prognostic factors, and comorbidities
• Treatment goals ○ Improvements in signs and symptoms ○ Suppression of disease-progression and structural damage not addressed ○ Improvement in QoL and other PROs only secondary	• Treatment goals ○ Remission or at least low disease activity (LDA) ○ Normalization of physical function and prevention of structural damage ○ Normalization of QoL and other PROs ○ Comorbidities managed or avoided
PsO[244–251]	
• Intermittent and cycling of therapies due to safety concerns	• Proactive, treat-to-target disease management with tight monitoring and shared patient/physician decision-making
• Phototherapy, topicals, or systemics used as standard of care, but associated with safety concerns and monitoring burden	• Phototherapy, topicals, or systemics used only for mild disease or as add-on therapy in moderate-to-severe disease; • Long-term maintenance therapy with TNF inhibitors and other targeted therapies
• No individualized treatment approach	• Individualized treatment approach considering patient characteristics, disease severity, prognostic factors, and comorbidities

(*Continued*)

Table 5 (Continued).

Pre-biologics era	Biologics era
• Treatment goals ○ PASI 50 ○ Improvement in QoL and other PROs only secondary	• Treatment goals ○ PASI 90 or PGA 0 or at least PASI 75 ○ Normalization of QoL and other PROs ○ Comorbidities managed or avoided

Abbreviations: AS, ankylosing spondylitis; 5-ASAs, aminoslicylates; CRP, C-reactive protein; csDMARD, conventional synthetic disease-modifying anti-rheumatic drug; FCal, fecal calprotectin; IBD, inflammatory bowel disease; NSAID, non-steroidal anti-inflammatory drug; PASI, Psoriasis Area and Severity Index; PGA, Physician Global Assessment; PRO, patient-related outcome; PsA, psoriatic arthritis; PsO, psoriasis; QoL, quality of life; RA, rheumatoid arthritis; TNF, tumor necrosis factor.

In RA, leading professional organizations, such as the European League Against Rheumatism (EULAR) and ACR,[215,216] now incorporate the general principles of tight control and treat-to-target in their treatment guidelines: early assessment of prognostic factors to weigh risk of disease progression; immediate use of MTX in combination with short-term steroids as a preferred first-line therapy; assessment of response to therapy every 3–6 months, including objective markers of inflammation, with LDA, if not clinical remission, and inhibition of joint progression as treatment goals; and continued and quick progression to the next line of therapy when treatment goals are not met.

Even in psoriasis, where Remicade is often overlooked because of the preference for subcutaneous TNF inhibitors and next-generation biologics, it was recognized early on for its quick onset of action and high degree of efficacy.[106] The advent of biologics has led to more stringent treatment goals and earlier treatment.[246] Prior to their availability, a 50% reduction in a patient's Psoriasis Area and Severity Index (PASI) score, measuring the proportion of skin covered with psoriatic plaques, was the goal of therapy. With today's new therapies, an improvement of this limited magnitude would likely trigger a change in therapy, with the goal being at least a 75% reduction in PASI and an improved quality of life (Dermatology Life Quality Index ≤5). With the next-generation biologics, IL-23 and IL-17 inhibitors, 90% PASI reductions and even full clearance of disease are realistic goals. While this disease lacks a long-term structural damage component found in the other indications of TNF blockade, it is associated with compromised psychosocial status, which the evidence suggests might be limited or even reversed with successful treatment.[256] Treatment guidelines now reflect tight-control and treat-to-target approaches with use of TNF inhibitors and other biologics recommended if phototherapy and conventional systemic agents fail to provide an adequate response.[241] Some experts go further and consider that with the long-term experience gathered with the use of biologics, no reason supports reserving them for second-line use.[185,217,257]

The improvement in outcomes offered by TNF inhibitors has also contributed to changes in the requirements of health authorities for the evaluation of new treatments. This is most evident in RA, where, for example, both the EMA and the FDA require greater improvement in symptoms than before TNF inhibitors were available. Where both had previously required evidence of improvement in single or composite measures of disease activity (eg, tender and swollen joint counts, ACR20), remission or measures of LDA should now be considered as evidence of efficacy.[258–260] The availability of improved therapies has provided a rationale for limiting the exposure of patients to placebo or ineffective therapies for a prolonged period of time; treatment longer than 12 weeks should include either an active comparator as the control or provisions for escape to rescue treatment for patients with active disease. Both health authorities recognize that demonstrating a benefit on structural damage is increasingly difficult because joint erosions are now unlikely to develop in this setting.

In both CD and UC the pattern is similar. Major health authorities today consider clinical remission, as opposed to response, to be an appropriate endpoint on which to evaluate a drug's efficacy. Moreover, while necessary, symptomatic response is no longer adequate. Both the FDA and the EMA now also require evidence of endoscopic improvement of disease, in recognition of mucosal inflammation as the underlying cause.[261–265]

Summary and conclusion

In 1992, when Janssen first provided the cA2 antibody to the Kennedy Institute to test the hypothesis that inflammation in RA is driven by TNF and could be suppressed with TNF blockade, no one could have foreseen the contributions the drug would make to science and medicine over the subsequent 20+ years. As described in this review, the learnings from Remicade can be divided into five categories, ranging from principles of drug development to practice of medicine to our understanding of the immune system.

First, Remicade was one of the first mAbs to establish the proof of principle of their use as the highly targeted therapies imagined at the time of their introduction in 1975, and was the first to establish a role for them in chronic diseases. Early studies with Remicade demonstrated how to administer mAbs while limiting their immunogenicity, enabling them to be used long term. Combined with the success of other early mAbs, eg, rituximab, trastuzumab, and related constructs, eg, etanercept, they have come of age, with more than 60 approved for use targeting a variety of specific mediators, over 30 of which are in chronic diseases.[266,267] At least 250 mAbs are in development today.[268] Research has already moved from chimeric to fully human mAbs and continues to advance to next-generation agents, such as bispecific antibodies and antibody–drug conjugates.[266]

Second, the proof of principle that targeted therapy could be an effective strategy to treat IMIDs was first demonstrated with Remicade. Despite the complexity of the immune system, initial studies confirmed that, at least in some diseases, the inflammatory response works in cascades; and inhibition of a single cytokine initiating a cascade can have a profound effect on disease. Targeted blockade of a single cytokine can yield a safety profile generally consistent with that of conventional immunosuppressants, yet without their cumulative and off-target toxicity risks and with a degree of efficacy well beyond what they provide. Today, most new drugs in development, biologics and small molecules alike, target specific mediators of disease.

Third, the Remicade postmarketing safety surveillance program, including both PMCs and routine pharmacovigilance, has been pioneering in establishing methodological and operational requirements for safety studies and in setting standards for design, scale, rigor, and duration of follow-up, specifically in the real-world setting. The program provided new understanding of the risks of conventional therapies and of the diseases themselves, knowledge that is essential when judging the relative risks and benefits of new therapies. Innovative solutions, such as use of big data, claims databases, and combining various data sources, have been established as feasible and acceptable methods of safety monitoring. Strong working relationships with a large network across academia are required to access existing data sources and to seek independent expertise in study design, conduct, and interpretation of results. Similarly, cooperation and transparency with health authorities are imperative, as is a commitment to publish results. Above all, adequate resources need to be allocated by the company, often for years, to handle the volume of work and to provide the expertise required across multiple disciplines.

Fourth, Remicade, surely one of the most rigorously studied biologics in medicine today, has taught us much about the role of TNF in the immune system and in the pathophysiology of several diseases. TNF drives the inflammation found in several IMIDs and does so in early as well as late disease. Conversely, the lack of benefit of TNF blockade in a number of diseases where it is elevated indicates that TNF elevation does not always mean that inflammation is mediated by or dependent on TNF. The studies where TNF blockade was not successful were not without scientific benefit, as they provided insights into the pathophysiology of these diseases. The effective use of TNF blockade in some diseases has given us hope that targeted therapy might work in others, and has fueled research that has already led to the approval of drugs targeting other components of the immune system (cytokines, receptors, integrins). Study of TNF blockade has also confirmed much of what was suspected about TNF's role in the immune system, in particular regarding infection, and broadened it further, as seen in demyelinating disorders, CHF, and paradoxical adverse events. Importantly, studies with Remicade and subsequent TNF inhibitors demonstrated that certain cytokines with a broad function in the immune system can be blocked without triggering an unacceptable level of safety risk.

The final category of Remicade's contributions is its influence on the practice of medicine. Across six different diseases, the improved efficacy of Remicade and other TNF inhibitors compared with conventional therapies has led to more ambitious treatment goals. Rather than just reducing symptoms, TNF blockade was able to address the underlying pathophysiology driving these diseases, thereby modifying their course, such that irreversible damage to the joints and the bowel could be avoided. This led to earlier treatment, use of predictors of disease progression and response, tighter monitoring and the use of treat-to-target approaches, and a reassessment of conventional therapies to optimize their safety and efficacy. In the case of rheumatology, csDMARDs, in particular MTX, experienced new life as therapies. In the case of IBD, the limitations of steroids and thiopurines became apparent. Clinical research on TNF inhibitors has led to different ways of assessing disease, the most vivid example being AS, where use early in the course of the disease led to the definition of a new disease entity, nonradiographic axial SpA. Lastly, the availability of TNF blockade has led to higher standards for assessing new therapies.

Even today, the list of learnings is still growing. Several studies in the Remicade PMC program are still ongoing (Table 4). Other studies continue to refine the use of TNF inhibitors in such areas as combinations with conventional therapies,

predictors of response, dose titration, and possible discontinuation after successful, sustained response. Independent investigators are conducting proof-of-concept studies with Remicade as treatment for various conditions not yet evaluated, including bipolar disorder, hypertension, and type 1 diabetes (Table 2). The study of the effect of TNF blockade on long-term comorbidities continues, prompted by the hypothesis that the inflammation driving IMIDs is also a contributor to these comorbidities, ie, cardiovascular complications or colorectal cancer in UC.

Perhaps Remicade's most important legacy is the impact it has had on the lives of many of the estimated 3 million patients it has been used to treat (Janssen, data on file). Recent studies across its indications have found that patients treated today with Remicade have lower levels of disease activity and shorter duration of disease at the time of initiation of treatment than in the past, resulting in lower rates of disability and improved quality of life. When combined with the patients receiving other TNF inhibitors, this amounts to a substantial decrease in the burden of some of the most common IMIDs in our society.[269–273] Amid Remicade's other considerable contributions to science and medicine, on which this manuscript has focused, this contribution to public health is perhaps the most important of all.

Abbreviation list

Footnotes

1 The earliest marketed date recorded in the Drug Product Database.

3 The American Hospital Formulary Service permits an easy review of information on a group of drugs with similar activities and uses and allows the reader to determine quickly the similarities and differences among drugs within a group. *AHFS® Pharmacologic/Therapeutic Classification*© used with permission. © 2022, the American Society of Health-System Pharmacists, Inc. (ASHP). The Data is a part of the AHFS Drug Information®; ASHP is not responsible for the accuracy of transpositions from the original context.

4 The purpose of the World Health Organization (WHO) Anatomical Therapeutic Chemical (ATC) classification system is to be used as a tool for drug utilization research in order to improve quality of drug use. Drugs are divided into different groups according to the organ or system on which they act and their chemical, pharmacological and therapeutical properties. 1802

5 The AIG number is a 10 digit number that identifies products that have the same active ingredient(s) and ingredient strength(s). The AIG is comprised of three portions:

- the first portion (2 digits) identifies the number of active ingredients,
- the second portion (5 digits) identifies the unique groups of active ingredients(s),
- the last portion (3 digits) identifies the active ingredient group strength. The strength group has a tolerance of -2% to +10%.

How a blockbuster drug tells the story of why Canada's spending on prescriptions is sky high

Remicade, a drug that treats arthritis and Crohn's disease, has been a runaway success in Canada. But, as Kelly Grant reports, its rise reveals vulnerabilities of a fractured system

KELLY GRANT > HEALTH REPORTER

PUBLISHED OCTOBER 20, 2018
UPDATED OCTOBER 23, 2018

A technician at Mount Sinai Hospital demonstrates how Remicade, a drug to treat Crohn's disease, would be administered. Remicade has a much higher market share than in Canada than in other developed countries, and Canadians also pay a higher price.

CHRIS DONOVAN/THE GLOBE AND MAIL

More below• The backstory to this report

On Feb. 29, 2016, a curious fax landed in the hands of Michael Ritchie, a supervisor in the hospital pharmacy at Toronto's Sunnybrook Health Sciences Centre.

It was an out-of-the-blue letter from Janssen, a unit of the pharmaceutical giant Johnson & Johnson, offering a discount on Remicade, a medication that eases the often harrowing symptoms of patients with Crohn's disease, ulcerative colitis and rheumatoid arthritis.

Normally, it is priced at $987.56 for each of the three or four vials required at every IV infusion.

But Janssen was prepared to give Sunnybrook – and, as it turned out, every other hospital in Canada – an unusual deal. "As a valued partner for Janssen," the letter began, "we are pleased to offer you a reduced hospital price of $0.01 for Remicade … inpatient use."

In an e-mail to his boss, Mr. Ritchie skewered the audacious offer with an exaggerated subject line: "Remicade bribe."

At the time, Janssen was facing competition from a new kind of drug called a biosimilar – a cheaper alternative that is almost, but not quite, the equivalent of a generic. The new version retailed for $525 a vial, about half the price of Remicade. Provincial governments and some private insurers were planning to promote the cheaper option by dictating that new patients would be covered only for this newer drug.

Janssen's penny-a-vial offer is one of several aggressive tactics The Globe and Mail uncovered in an investigation into the juggernaut that is Remicade. With $1.1-billion in sales in 2017, it is Canada's top-selling drug by revenue, according to the pharmaceutical analytics company IQVIA, and one of the most lucrative in the country's history. It is one of only two drugs to eclipse a billion dollars in sales in Canada in a single year.

To protect Remicade's market share, Janssen has signed confidential pricing deals with insurers, covering more than 90 per cent of privately insured Canadians; taken the Quebec government to court over its decision to stop covering Remicade for new patients; deployed a deep discount to separate Prince Edward Island from the federal-provincial-territorial alliance that negotiates drug deals; and attempted to dissuade physicians and patients from choosing biosimilars.

DATA SHARE

Read more below about how The Globe obtained the data for this story, and read letters about drug pricing between the maker of Remicade and the Patented Medicine Prices Review Board.

The Globe investigation also found that Janssen has for years paid Canadian doctors each time Remicade is infused in their offices – a practice that is in a legal grey area in one province, Ontario. Pharmaceutical policy experts, though, call it a thinly disguised incentive to prescribe Remicade.

Janssen says its sales and marketing tactics are guided by one principle: its desire to ensure physician choice and patient access to its drugs. The one-cent-a-vial offer, Janssen contends, was never intended to gain public coverage of Remicade for new patients after they left the hospital, but to make sure physicians and patients, including children with severe bowel disease, could still get the drug they needed. The biosimilar, called Inflectra, is not yet approved for children.

Janssen's Canadian division and its parent company, Johnson & Johnson, are hardly the only pharmaceutical giants who play hardball to protect their bottom lines. The manufacturers of other infused drugs, including Pfizer, which makes Inflectra, pay per-infusion fees to doctors, too. But Janssen's constellation of efforts on behalf of Remicade in Canada have succeeded in a way that puts the drug in a league of its own.

Canadians pay a higher sticker price for Remicade, and use much more of it per capita, than in the United States or Europe, according to the federal drug-pricing regulator – this despite the fact that Remicade's patent has expired and there are cheaper options available.

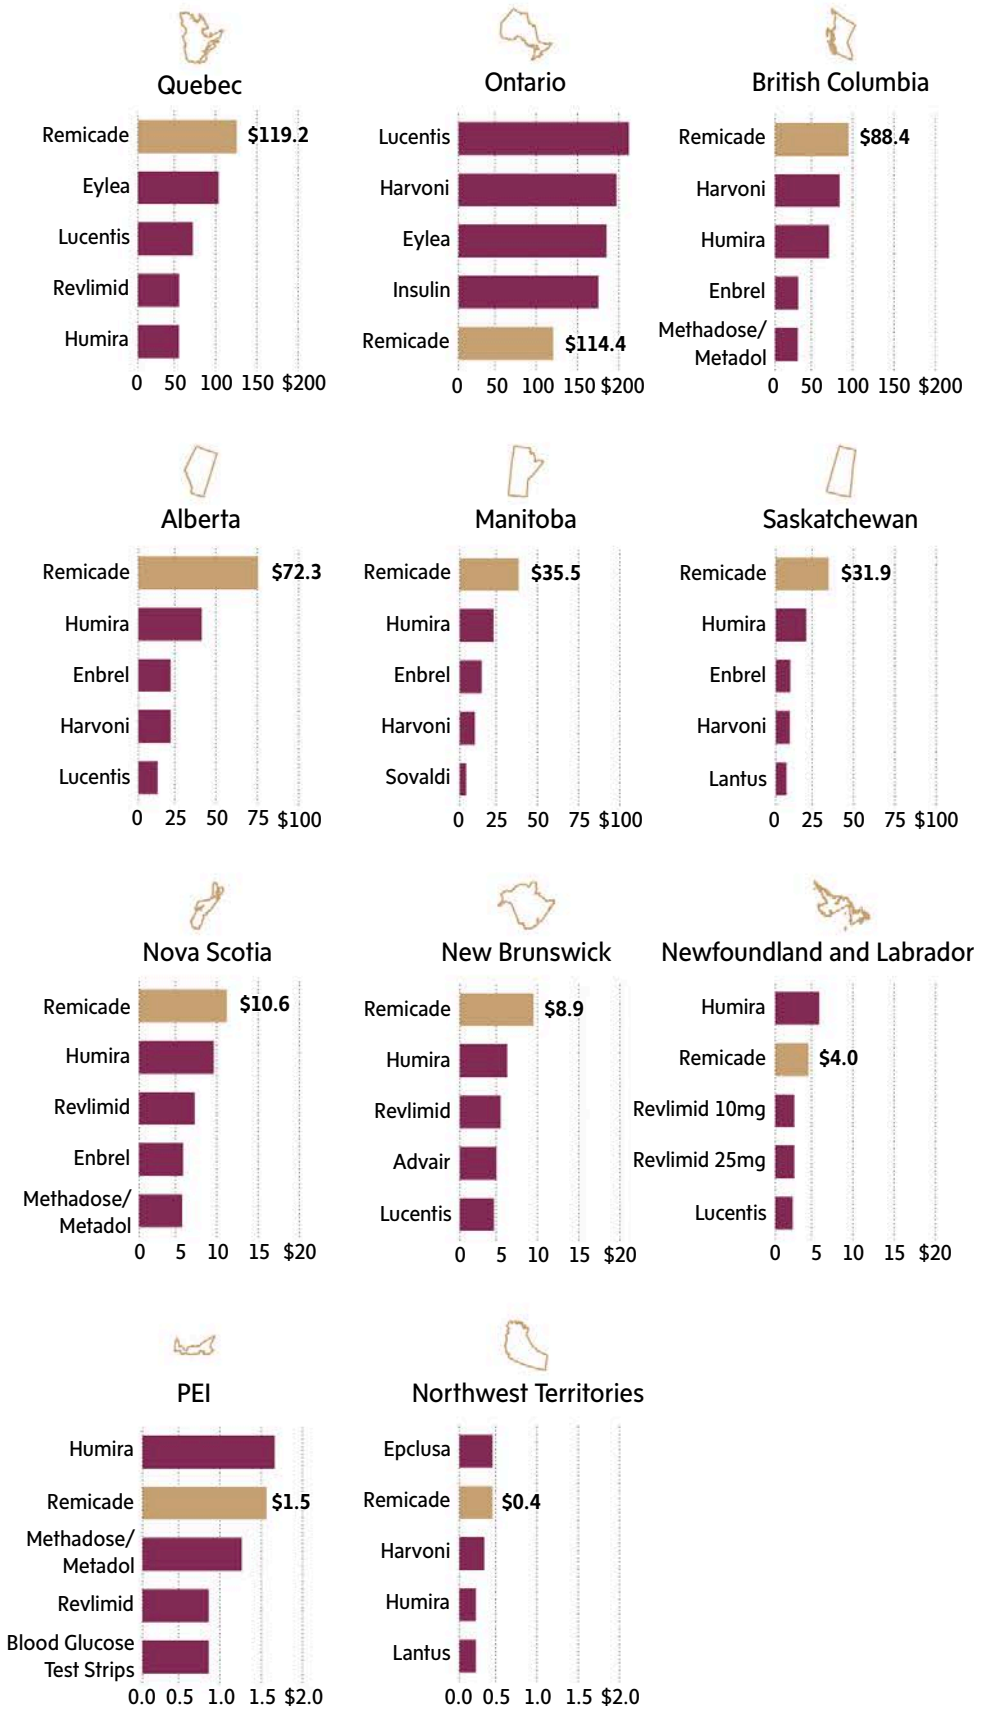
"When you compare Canada to other countries," says Marc-André Gagnon, a pharmaceutical-policy expert at Carleton University in Ottawa, "there is something going on with this drug."

During a 10-month investigation, The Globe examined documents obtained through 30 Freedom of Information Act requests and conducted more than 50 interviews with doctors, patients and drug-industry insiders. The result is an unvarnished look at how drug companies take advantage of a fractured system, in which Canadians pay for prescription drugs through more than 100 public and 100,000 private insurance plans. It is a system that is ripe for manipulation.

Remicade's success in Canada is not a story about a bad or ineffective drug thrust upon patients who don't need it. Remicade is a good drug – a wonder drug, even. But in revealing how it is sold and promoted in this country, and the health-care policies that allowed it to gain such a foothold, a picture emerges that helps explain why, per capita, only the United States and Switzerland among Organization for Economic Co-operation and Development countries spend more on drugs than Canada does.

Top 5 drugs by public spending, 2017

In millions of dollars



Note: Total government spending usually includes markups and dispensing fees. In Ontario and Nova Scotia, the totals for Remicade include a small amount of spending for Inflectra, a biosimilar of Remicade. No data available in Nunavut and Yukon.

CHEN WANG/THE GLOBE AND MAIL, SOURCE: PROVINCIAL AND TERRITORIAL HEALTH MINISTRIES

Read our note on data below

About 300,000 Canadians suffer from rheumatoid arthritis. Crohn's disease and ulcerative colitis afflict nearly 250,000 people in Canada, which has one of the highest reported prevalence rates of the conditions in the world – a fact that goes some of the way toward explaining why Canada uses more drugs like Remicade than most other countries.

All three conditions are autoimmune disorders, and all can be debilitating.

It used to be that physicians had little to offer these patients. Scientists did not understand precisely how autoimmune disorders turned the body's defence system against itself, inflaming the joints or gastrointestinal tract.

That started changing when Marc Feldmann, an Australian immunologist, began looking, in the 1980s, for an answer in cytokines, a group of small proteins that tell the cells in the immune system how to behave. Working in a London lab with tissue from the knee joints of rheumatoid-arthritis patients, Dr. Feldmann and his research partner, rheumatologist Ravinder Maini, found they could halt a cascade of inflammatory effects by blocking the haywire signals from one type of cytokine called tumour necrosis factor alpha, or TNFa.

That discovery led to the testing of a TNF-blocking molecule called infliximab – then owned by Centocor, a small Pennsylvania biotechnology company – on patients with rheumatoid arthritis. Delivered by intravenous drip, infliximab was a biologic, a complex drug manufactured in living cells. It nearly erased the horrific symptoms of rheumatoid arthritis, but only for about 10 weeks. The relapses signalled that Centocor had a breakthrough far more lucrative than a cure: a drug that could transform lives, but which patients would have to take – and pay for – for years to come.

In 1999, Johnson & Johnson bought Centocor. More than a decade later, it renamed the unit Janssen. (Janssen Canada, meanwhile, took over the marketing of Remicade from Merck in 2011.)

Today, more than 25 years after the initial clinical trial of infliximab, the drug that would eventually be sold under the brand name Remicade, TNF-blockers bring in more money worldwide than any other class of drug. Remicade is now the fifth-best-selling drug in the world, with global sales of US$7.2-billion in 2017, according to EvaluatePharma, a U.S. company that analyzes the pharmaceutical and biotechnology sectors.

In Canada, Remicade is not fifth, but first.

Janssen, however, contends that Remicade is no longer the Canadian sales behemoth it appears to be. Data from IQVIA show Remicade is losing ground to competitors among new patients, but they also show prescriptions for the drug have steadily risen for the past five years.

But when it comes to sales, it's hard to know the truth. All publicly available information about brand-name drug sales in Canada must be gleaned from "list" prices, which don't reflect confidential discounts and rebates now commonplace in the global pharmaceutical industry.

Even the Patented Medicine Prices Review Board, Canada's drug-pricing regulator, is left in a position of trying to divine what it can from those list prices. And Canada's Freedom of Information laws are no help on this front: Such laws exempt commercial secrets. (And those secrets are tightly guarded: When three Toronto hospitals were prepared to release details of the one-cent-vial offer through an FOI request, Janssen objected. The case is now in the hands of the province's Information and Privacy Commissioner. The Globe obtained a copy of the fax.)

Still, it's clear the footprint of Remicade is much larger in Canada than elsewhere. According to the federal drug-pricing regulator, Remicade accounted for 40 per cent of all the biologic disease-modifying antirheumatic drugs sold in Canada last year – compared with roughly 21 per cent in Switzerland, 13 in the United States, 7 in Germany and 4 in Britain. Janssen says the report that includes those figures is misleading and lacks context, but the regulator stands by the report.

Read our note on data below

As the first widely sold intravenous therapy for a chronic disease, Remicade's arrival on the scene, in 2001, confounded a Canadian policy born in the age of simple pills: Hospital care is free to patients, but prescription drugs taken outside of a hospital are not. Which was Remicade?

Hospital outpatient clinics, mindful of shouldering the cost of one of the most expensive medications ever sold in Canada, were slow to make space for Remicade users, who usually require a two-hour IV drip every eight weeks. So Schering-Plough, the company that launched Remicade here on Centocor's behalf, did something radical: It set up its own infusion centres in strip malls and office blocks, helping to spawn a large private infusion industry that today operates alongside Canada's public health-care system.

"To some extent, it was a relief," says Steve Long, a pharmaceutical-industry consultant and a former head of Alberta's public drug program. More patients got Remicade and hospitals saved money, with those costs offloaded to private insurers and provincial government-sponsored drug plans.

Ontario's drug plan for patients with catastrophic annual drug costs saw its budget soar from about $50-million in 2000 to almost a half-billion dollars by 2016, according to a study published in March of this year. Although other high-priced drugs played a part, the program paid out twice as much for Remicade as for any other drug in 2015. Seven of 10 Canadian provincial governments say they spend more on Remicade than on any other prescription drug.

Today, about 90 per cent of all Remicade is delivered at private infusion centres, which also infuse other intravenous medications. Such centres are paid for by drug makers and run by third parties such as McKesson, the drug distributor and pharmacy company that owns the Rexall drug-store chain, and Innomar Strategies, whose clinics are exclusive providers of Inflectra, the Pfizer-owned biosimilar of Remicade. At most such clinics, nurses insert the intravenous lines and monitor the infusions, while doctors are paid to be on-call in case of serious drug reactions. As Janssen points out, these pharma-sponsored clinics save the public health-care system money.

Janssen has also insinuated itself directly into the public health-care system, in limited ways, by sponsoring infusion services inside at least two hospital outpatient clinics and even in the offices of doctors themselves. The company pays doctors who operate infusion chairs inside 46 offices across the country – most of those home to multiple practitioners – a fee of $275 for every infusion of Remicade, The Globe has learned. (Janssen would not confirm the amount of the fee, calling it confidential.) It is, of course, a fee that would not be paid if patients were prescribed one of the drugs that can be injected at home.

Pfizer, in a bid to keep pace with Janssen, says it also pays doctors $275 for every in-office infusion performed. Both companies say the fees are meant to help doctors defray their overhead costs, particularly the salary of infusion nurses.

And while the drug companies say the health-care system has left them with no choice but to pay per-infusion fees, that is not strictly true everywhere. Ontario's Ministry of Health and Long-Term Care says it has a billing code that doctors can charge for starting or supervising infusions of Remicade, even if the work is delegated to a nurse. What is true: The code pays significantly less than $275 per infusion.

Of the 40 or so doctors The Globe tried to contact, one of the few on-the-record responses came from Mary Morgan, the manager of the screening clinic at Toronto's non-profit Kensington Health, whose services include a long-term care home, a hospice, a surgical eye centre and the screening clinic that Ms. Morgan manages.

Beginning in the 2013-14 fiscal year, Kensington opened an infusion room. Janssen lent the clinic three lounge chairs – Janssen says it has since discontinued the practice of lending equipment such as chairs and IV poles – while McKesson lent a medical fridge, said Ms. Morgan. Under the terms of its deal with Janssen, the clinic receives "a per-infusion, per-person fee" every time a patient receives an IV drip of Remicade, Ms. Morgan said.

The clinic also receives a payment from McKesson for reconstituting, or mixing, the drug, Ms. Morgan said, adding that the amount of both fees is protected by a non-disclosure agreement. (A McKesson spokesman declined to answer a list of detailed questions, including whether it pays fees to doctors for infusions. "The implication that McKesson Canada impacts prescribing rates of Remicade is categorically false," spokesman Darius Kuras wrote in an e-mail.)

Ms. Morgan, a nurse who began managing the clinic last spring, said the ethics of accepting fees for infusions from a drug company has never come up as a concern for the clinic's doctors, who like that the infusion room allows them to keep a closer eye on patients. "We are a not-for-profit," she said. "We just need [our staff's] time to be reimbursed and our space to be reimbursed."

Innovative Medicines Canada, the industry group that represents makers of brand-name drugs, has a Code of Ethical Practices that prohibits its member companies from making payments to doctors that could be construed as an incentive to prescribe a particular medication. Both Janssen and Pfizer say infusion fees don't break the industry's Code of Ethics. "We've been through this with [Innovative Medicines Canada]," said Andy Williams, Janssen Canada's vice-president of sales and marketing for immunology drugs. "The practice is not a secret and it's certainly not unique to Janssen. All the elements of the practice have been scrutinized, per the code, and have been deemed to be not in violation."

On its face, infusion fees would also appear to break a 2004 Ontario law designed to prevent third parties from paying doctors to perform services that are paid for by the Ontario Health Insurance Plan (OHIP). Providing infusions of Remicade is an insured service in Ontario, according to the Ministry of Health and Long-Term Care. Doctors can bill $54.25 per infusion.

Janssen disputes this as well: Citing fine print in the schedule of benefits for physicians in Ontario – home to 31 of Janssen's 46 in-office infusion locations – the company argued that doctors cannot bill anything to the public system for providing infusions in their offices. The Ontario ministry, presented with Janssen's interpretation, disagreed.

Either way, Janssen spokeswoman Teresa Pavlin said, the company's contracts make clear that the fees are not to be treated as an incentive to prescribe and that doctors can't bill the public purse while also accepting infusion fees for the same service. "While the ultimate responsibility lies with physicians to ensure that they utilize available billing codes, Janssen has never been informed of the availability of such codes until now."

Ontario government bureaucrats, however, had concerns about the fees to doctors. A 2017 briefing note drawn up for Ontario's deputy health minister, and obtained by The Globe through a Freedom of Information request, flagged the risk that infusion fees "may be viewed as incentives for physicians to prescribe and administer select drugs."

Matthew Herder, the head of the Health Law Institute at Dalhousie University in Halifax, is even blunter. "It's a huge ethical question," Mr. Herder said of the per-infusion fees. "There are clear

grounds for a complaint on conflict of interest."

Nav Persaud, a family physician and associate scientist at St. Michael's Hospital in Toronto who studies pharmaceutical policy, called the per-infusion fee structure a "high-risk scenario" for undue influence on prescribing behaviour. "It's hard for me to think of a higher-risk situation."

The Ontario briefing note does not mention Janssen or Remicade by name, but it does enumerate the risks inherent in letting brand-name biologics makers pay infusion fees: "Physicians may be influenced to prescribe a certain biologic; physicians may be reluctant to switch or start their patients on biosimilars due to fees paid to the physician by the brand manufacturer; [and] the ministry's savings potential due to market entry of biosimilars may be less than expected if physicians continue to get administration fees for branded biologics." (The writers of the briefing note seemed unaware that Pfizer had also begun paying doctors $275 fees for infusions of Inflectra.)

Dr. Nav Persaud of St. Michael's Hospital in Toronto says per-infusion fees put physicians at undue risk of outside influence.

CHRISTOPHER KATSAROV/THE GLOBE AND MAIL

Despite those concerns, Ontario's former Liberal government took no public action against drug or specialty pharmacy companies who paid these fees, or doctors who accepted them, before the Progressive Conservatives swept them out of office in June. Now, Janssen says it is phasing out its in-office infusion program, because it has enough private clinics to satisfy the demand for Remicade.

Doctors' offices are not the only places accepting fees from drug companies, including Janssen, for every infusion.

Toronto Western Hospital, part of the University Health Network (UHN), also accepts a fee of $275 for every infusion of Remicade – and Pfizer's Inflectra, for that matter – provided in its outpatient infusion clinic, which was founded nearly 20 years ago to facilitate a clinical trial of Remicade.

In fact, a Janssen-paid patient support program co-ordinator had worked inside the Toronto Western clinic from 2000 until late last year, educating patients and helping them to secure insurance coverage of Janssen drugs. (UHN ordered the job description changed last fall after The Globe asked about a Janssen want ad seeking to replace the co-ordinator. The post has not been filled.)

The payments for infusions go to the budget of UHN's Division of Rheumatology – not into doctors' pockets – and cover nursing services at the clinic. But if UHN doctors prescribe alternative medications that patients swallow or inject at home, the hospital earns nothing.

In 2017-18, infusion payments brought in $153,725 for UHN, the vast majority for Remicade infusions.

Although Jorge Sanchez-Guerrero, the chief of the division of rheumatology at UHN, says "there are many, many advantages" to providing infusions in a hospital outpatient clinic, where doctors can

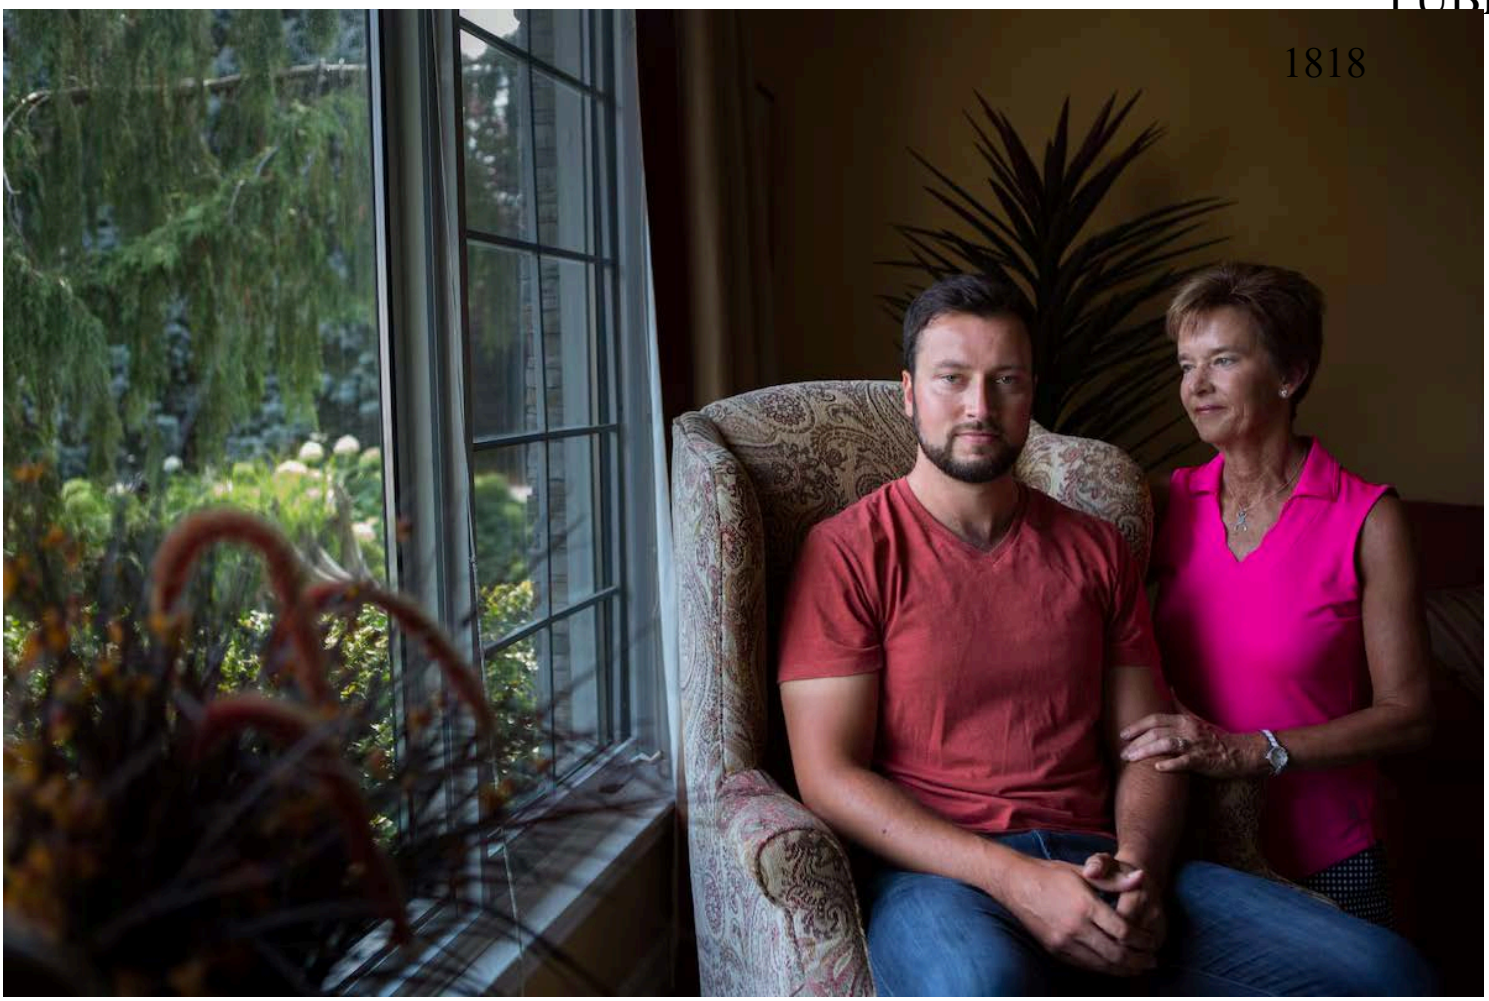
swoop in if a patient reacts badly to an infusion, he acknowledges a stark fact as well: UHN couldn't afford to run the clinic without financial support from the pharmaceutical industry.

Dr. Sanchez-Guerrero also oversees the division of rheumatology at Mount Sinai hospital, a few blocks east of UHN's Toronto Western site. Mount Sinai's outpatient infusion clinic, a larger operation that infuses seven different drugs and employs 14 staff, earns between $400,000 and $600,000 in infusion fees per year, according to spokesperson Sally Szuster.

Ms. Szuster wouldn't divulge the per-infusion payment for each drug, citing confidentiality agreements. About one-third of the patients who received infusions of any kind at the clinic in the first six months of this year were on Remicade, she said.

Neither UHN nor Mount Sinai could point to any other outpatient services for which a third party's payments cover nursing. And health officials across the country told The Globe that when patients don't live near a private infusion clinic, Remicade – purchased by the patient from a pharmacy – is usually infused at a local hospital's outpatient area or emergency department, with the nursing costs covered by the hospital budget.

As Bruce Conway, a spokesman for Alberta Health Services, said of the per-infusion fees, "We have never explored that option due to the potential for a perceived conflict of interest."



Adam Scully, shown with his mother, Ruth, at their Toronto home, is a hockey goalie turned TSN producer who was prescribed the drug Remicade to treat Crohn's disease.

CHRIS DONOVAN/THE GLOBE AND MAIL

Adam Scully was on the cusp of his 18th birthday when he learned he had Crohn's disease. The diagnosis in January of 2010 explained the searing pain radiating from his small intestine and into his esophagus. "It was as if somebody stabbed me right here," Mr. Scully, now 26, says, pointing to the middle of his chest. "I couldn't move."

At first, he tried a steroid and an immunosuppressant to manage his symptoms, but by early 2012 his condition had worsened. He remembers howling in pain during a colonoscopy at Mount Sinai.

Immediately after the colonoscopy, Mr. Scully's gastroenterologist, Dr. Hillary Steinhart, invited Mr. Scully and his mother, Ruth, to his office to recommend that Mr. Scully start on an anti-TNF drug.

Dr. Steinhart told him he could choose between a drug Mr. Scully would inject at home and one that would require two-hour visits to an infusion clinic every eight weeks. His needle-phobia led him to pick the latter – Remicade. Someone from a program called BioAdvance would be in touch soon, Dr. Steinhart said. "Literally from the drive from Sinai to here, she had already called us," Ruth Scully said in an interview from the family's home, about half an hour from Mount Sinai. "It was like a godsend."

BioAdvance is Janssen's patient-support program. The person who so swiftly called was a Janssen-employed nurse and BioAdvance co-ordinator who would act as Mr. Scully's personal concierge, ushering him on to Remicade. For starters, she handled the paperwork required to have Mr. Scully's Remicade partly covered by his mother's insurance.

When, less than a year later, Mr. Scully graduated from college and started working as a freelance TSN producer without benefits, the BioAdvance co-ordinator showed him how to pay rent to his parents, which would help him qualify for a provincial drug plan that would have been off-limits to him if his meagre income had been lumped in with that of his parents.

She scheduled the tests Mr. Scully needed before his first Remicade infusion, and has helped schedule the subsequent infusions that have dramatically improved his health.

Cadillac service from a pharmaceutical company – especially service that builds loyalty to a particular brand of drug – might seem at odds with the pride Canadians take in publicly funded medicine. But because Canada lacks a national pharmacare program, unlike most prosperous countries, it is exceptionally reliant on the drug industry to fill consequent gaps in health care.

Pharmaceutical companies in Canada spent just over $900-million to serve 673,000 patients enrolled in Patient Support Programs in 2016, according to a report commissioned by the industry group Innovative Medicines Canada.

Many in Canada's pharmaceutical world trace the Patient Support Program phenomenon back to the wild success of the program set up to sell Remicade.

"[The private clinics] started out as a limited initiative that allowed the drug to be marketed. If you can't infuse it, you can't sell it," says Brian Feagan, a gastroenterologist at London Health Sciences Centre and a professor of medicine at the University of Western Ontario. "But that initiative actually allowed them to build value-added services … that aren't provided by the health-care system."

Schering-Plough (the company that launched Remicade in Canada), and later Janssen, offered lab tests during infusion appointments and, with patient permission, fed the results back to doctors, Dr. Feagan notes.

The company assigned personal nurse co-ordinators to every patient, to educate them about Remicade, schedule their infusion appointments, and handle the voluminous insurance paperwork required to start new users on a high-priced drug. Such time-consuming work would be left to doctors or their administrative staff if not for help from a company that stands to benefit financially every time a new patient starts on its drug.

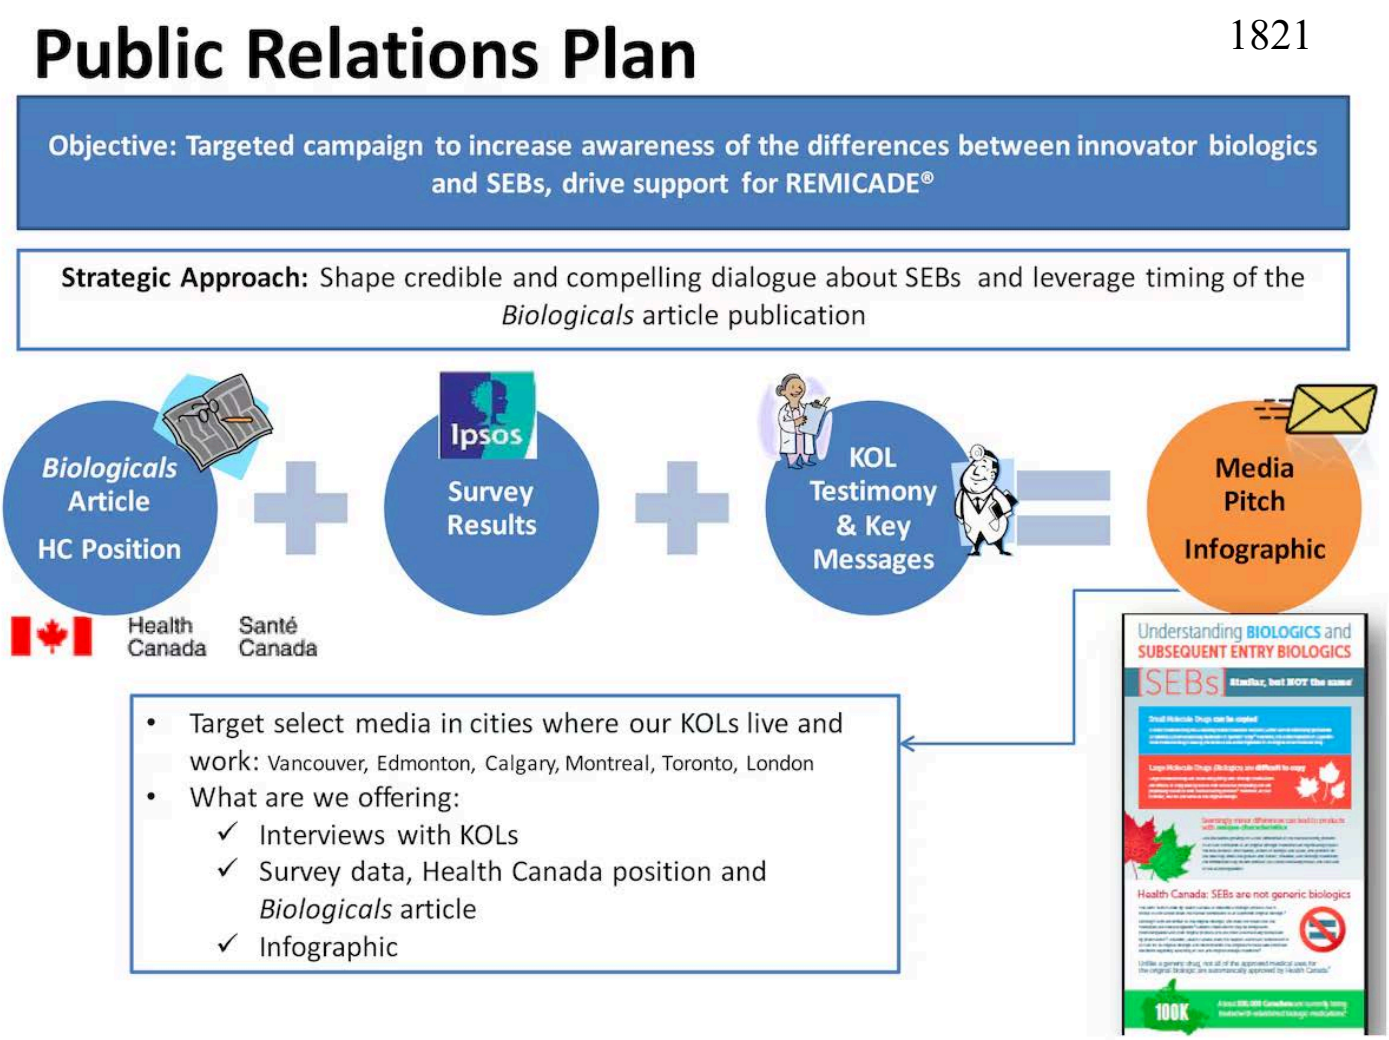
BioAdvance, and now other Canadian Patient Support Programs, often "bridge" patients with free drugs until their insurance coverage comes through. But BioAdvance, says Ms. Morgan, manager of the Kensington Screening Clinic, is the gold standard. "So when a doctor is trying to get his or her sick patient to treatment the fastest, they typically tend to go with BioAdvance."

And that means they tend to go with Remicade, or with one of the newer Janssen drugs that are now part of the BioAdvance program.

Competing drug makers have scrambled to keep up. Some pharmaceutical companies contract out their Patient Support Programs to third parties, as Pfizer has done with Inflectra, by using Innomar Strategies not only to run infusion clinics but also to administer the Canadian support program.

And drug companies, like any other successful business, move heaven and earth to keep a customer's loyalty once it's won. "As soon as you decide to change to another product, you can be sure that the nurse will call you the day after to ask you, well, what is happening? Why do you prefer to stop the treatment with us?" says Mr. Gagnon, the Carleton University professor.

When the not-for-profit benefits carrier Green Shield Canada launched a pilot project earlier this year that allowed participating companies to force their workers to switch from brand-name Remicade and Enbrel to a biosimilar – or pay the difference in cost – Janssen sent a letter directly to Remicade patients warning them they would lose their BioAdvance services if they switched.



A page from a Janssen PowerPoint presentation shows the public relations plan intended to drive support for Remicade.

In June of 2013, Janssen gathered eight eminent physicians in Toronto for a roundtable discussion. The company paid each of them approximately $4,000 to work on a paper, which would later be published in an obscure but peer-reviewed scientific journal called Biologicals. The subject of the article was biosimilars and "challenges" with one aspect of the approval process in Canada, the U.S. and Europe.

All the participants signed off on the paper's conclusions, but a Janssen employee drafted and revised it, a fact disclosed in the fine print.

Not disclosed, however, was Janssen's plan to use the article in a public-relations blitz against biosimilars. A November, 2014, Janssen PowerPoint presentation, obtained by The Globe and Mail, prepared for the company's community-and government-relations teams, outlined a plan to "drive support for Remicade," in part by "leverag[ing] timing of Biologicals article publication."

As London gastroenterologist Dr. Feagan, the paper's lead author, and Robin Thorpe, the journal's editor-in-chief, both pointed out in interviews, there is nothing incorrect or, on its face, biased in the article. The paper merely raised concerns at a time when biosimilars were relatively unknown.

But Richard Smith, a past editor of the BMJ (formerly the British Medical Journal) who has written widely about the pharmaceutical industry's manipulation of medical journals, said: "A little bit of doubt, in these circumstances, is going to go a long way."

Ambiguity is something that comes easily in the field of biologics. And with that ambiguity comes an opening for yet more doubt – and profitable doubt, at that.

First, the ambiguity: Knock-offs of biologic drugs are called biosimilars, not biosames, because such drugs are not absolutely identical, the way generics are, to the brand-name drugs they mimic. With each new batch of lab-produced cells, biologics morph, albeit in very tiny ways.

It's a distinction with practical implications. In Canada, pharmacists, at the behest of private and public payers, can swap in generic drugs without a doctor's say-so. But they are not allowed to do the same with biosimilars, because of rules in every province.

Those rules are rooted in Health Canada's decision not to declare any biosimilar 100-per-cent "interchangeable" with its brand-name counterpart. That designation, the regulator fears, could unleash unlimited switching between many copies made by different drug companies, decades in the future. Such multiple switches could, at least in theory, provoke an immune response in some patients, diminishing the drug's effectiveness. As well, the brand-name drug and its copies could grow further apart, as minuscule differences in the molecules pile up over decades, a phenomenon known as manufacturing drift.

That said, it's perfectly safe for patients to switch once or even a few times – regardless of how long they've been taking the brand-name biologic, according to Anthony Ridgway, a senior regulatory scientist at Health Canada.

"When we say a drug is safe and efficacious for that clinical indication," he says, "then people should count on that as being correct."

Yet that message seems not to have filtered down to Canadian physicians, who tend to err on the side of caution with even the most theoretical of Health Canada's concerns. And so, from ambiguity, an opening for Janssen to sow yet more doubt – the kind that could help keep biosimilars from making it onto prescription pads.

In another PowerPoint presentation, this one produced for Janssen's Ontario government-relations and community-relations teams, staff laid out their strategy for influencing patient-advocacy groups, provincial officials – and doctors. This was two months before Health Canada approved Inflectra as a Remicade biosimilar.

The document singled out the Ontario Association of Gastroenterology (OAG) as one rich target for "advocacy development" in the first quarter of 2014. Keeping specialists in inflammatory bowel disease onside would be essential: About three-quarters of the Remicade used in Canada is for

Crohn's and colitis, which don't have nearly as many biologic treatment options as does rheumatoid arthritis.

"To date, OAG has lagged behind other physician associations with respect to both knowledge on SEBs [biosimilars] and advocacy ability," one slide reads. "Following OAG January conference which will include SEB session, encourage OAG to develop position statement on SEBs. … source potential [government relations] consultants to work with OAG."

The OAG turned down multiple interview requests with The Globe and declined to answer e-mailed questions about whether it had, in fact, developed a position statement on biosimilars at Janssen's urging. "At this time," Melonie Hart, a spokeswoman for the OAG, wrote in March, "the OAG leaders are not available to respond to your lengthy questionnaire as they are too busy attending to the needs of their patients."

Julia Brown, Janssen's vice-president of government affairs and market access, told The Globe that whatever ideas may have been discussed internally during a PowerPoint presentation, the company's internal compliance department would never green-light payments to third-party consultants to guide the OAG; nor would it allow the company to help any group craft a position statement without making Janssen's financial support clear in the document.

The OAG did, however, ultimately publish a position statement – which Janssen said it did not fund in any capacity – on biosimilars in September of 2016. That statement discouraged the "non-medical switching" of existing patients away from the brand-name biologic to a biosimilar.

CHRIS DONOVAN/THE GLOBE AND MAIL

If Canada had a single-payer national pharmacare program, it could (in theory, at least) force all patients taking Remicade to switch to a biosimilar tomorrow – simply by refusing to cover the cost of the brand-name version.

In B.C. alone, according to a 2016 briefing note for the province's health minister, "If switching were supported, then the province could save more than $30-million each year. If all payers took advantage of the lower cost [of biosimilars] then the total provincial savings would be about $50-million per year."

One way that Janssen tries to keep such "switching" from occurring is by striking what are known as product-listing agreements, or PLAs, with private insurers: In exchange for a discount off the list price of Remicade, private insurers provide some manner of protection for it, the details of which are confidential. The agreements for high-priced drugs of all kinds have become popular with insurers trying to tame runaway drug costs in the short run.

The Remicade deals are an especially big hit. According to a Nov. 18, 2016, e-mail from a Janssen official to an Alberta MLA, obtained through a Freedom of Information request, Janssen's offer to be "cost competitive with biosimilars has been enthusiastically received" by companies covering more than 90 per cent of privately insured Canadians.

Critics of the Remicade deals with private insurers, however, argue the confidential deals have helped block the biosimilar drug Inflectra from the market, stifling competition. Green Shield, the not-for-profit benefits carrier, has rejected such overtures, while elevating biosimilars to preferred status in its benefit plans. According to Ned Pojskic, the pharmacy strategy leader at Green Shield, even if the confidential deals merely put Remicade and the biosimilar on equal footing, the biosimilar would still be at a disadvantage. "What that practically translates into is nobody prescribes the biosimilar," he said. "[That's] because of lack of familiarity, lack of understanding and, quite frankly, some of the fear-mongering that went on in the market in the early days."

When Janssen began locking down its first round of product-listing agreements for Remicade, it's unlikely the country's private insurers knew what their counterparts in the public sector would achieve in their own price negotiations with Pfizer, the maker of biosimilar Inflectra. Ultimately, in 2015, Pfizer reached an agreement with the pan-Canadian Pharmaceutical Alliance – which negotiates group drug discounts on behalf of Ottawa and the provinces and territories – to offer Inflectra at $525 a vial, roughly half the list price of Remicade.

In an unusual move, the federal-provincial-territorial alliance and Pfizer agreed to reveal the size of that discount and make it available to all payers, government and private alike; the provinces, in turn, promised to promote cheaper biosimilars by refusing to cover Remicade for new patients. But before the deal was revealed, Janssen officials guessed the discount for Inflectra would be less generous than it ended up being – "possibly 25-30% less than Remicade (room to go lower)" – according to the November, 2014, PowerPoint presentation obtained by The Globe.

So, did private insurers lock in a price for Remicade that was higher than that ultimately settled on for Inflectra? With the private payers sworn to secrecy, only Janssen knows for sure, although Janssen says its confidential PLAs have made Remicade "cost competitive" with the biosimilar and don't in any way prevent physicians and patients from choosing other drugs.

"All of us have learned through the Remicade experience," said Stephen Frank, the president of the Canadian Life and Health Insurance Association, which represents private insurers. "There are things we're going to look to do differently in the future."

Janssen has aimed a similar divide-and-conquer strategy at individual provinces. The pan-Canadian Pharmaceutical Alliance asks pharmaceutical companies to make proposals to its central office, but Janssen has ignored that request and pursued side deals on Remicade anyway, according to a 2017 Quebec court case and other documents obtained by The Globe through Freedom of Information requests.

In an Oct. 31, 2016, letter to Janssen president Chris Halyk, the pan-Canadian Pharmaceutical Alliance explained that it was rejecting an unsolicited discount offer on Remicade. "[The] pCPA understands that the motivation behind the submitted proposal and willingness for Janssen to now offer value is due to the introduction of competition from [a biosimilar] …" the letter says. "The manufacturer is

kindly requested to communicate with the pCPA office directly and not approach the individual jurisdictions," the letter reads.

Quebec Superior Court Judge Brian Riordan thought the letter was extraordinary enough to quote in full in his Nov. 27, 2017, dismissal of a Janssen court challenge against Quebec's decision to stop covering Remicade for new patients. Janssen is appealing.

Janssen has cast its line in other provinces, too.

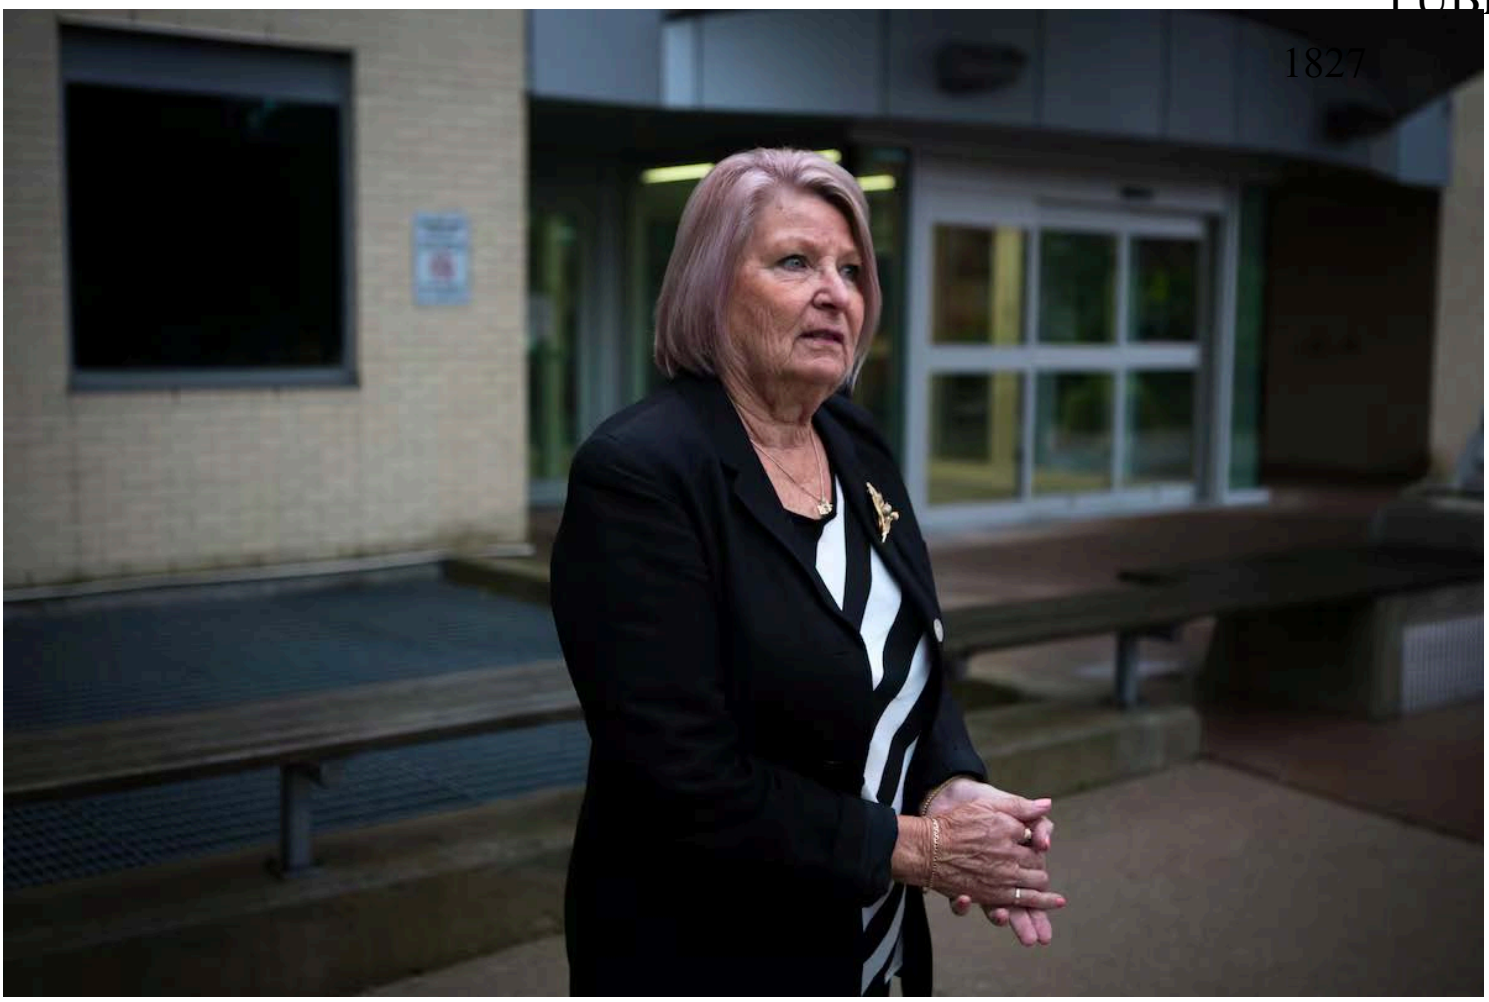
Adrian Dix, B.C.'s Health Minister, wouldn't divulge details of Janssen's offers to his province, but said the terms were unacceptable to a government that supports the pan-Canadian Pharmaceutical Alliance's efforts to promote biosimilars. "People talk about how one funds a national pharmacare program," Mr. Dix says. "One of the ways one does that, surely, is to reduce the overall costs of drugs through collective action."

But voluntary collective action apparently has its limits. In a Jan. 25, 2017, e-mail to colleagues, Grant Wyand, then PEI's acting director of pharmacare, floated the idea of accepting a Janssen offer by which the company would provide Remicade at less than the cost of Inflectra in exchange for the PEI government agreeing to cover Remicade for new patients on the island. "This is offside with pCPA," Mr. Wyand noted.

Further e-mails among the PEI bureaucrats revealed that, after the province passed its policy limiting new patients to Inflectra, physicians were simply prescribing other brand-name drugs, mainly the injectable, Humira, instead of the biosimilar.

In February of 2018, PEI announced that it had changed its rules to cover Remicade for new patients, breaking with the pan-Canadian Pharmaceutical Alliance.

Ms. Brown, the Janssen VP, says the company's offer to the negotiating alliance remains on the table. As for why Janssen kept making its offer in provincial capitals, she said: "We still knew there were provinces … who had concerns about patient choice and about cost and wanted to talk to us."



Three years ago, Renate Rasokas switched from Remicade to the biosimilar Inflectra, and is doing well on the new drug.
CHRIS DONOVAN/THE GLOBE AND MAIL

When Renate Rasokas of Tillsonburg, Ont., switched to Inflectra in September of 2015, it was "not a big production." Her rheumatologist, Janet Pope, said the biosimilar was cheaper and designed to work as well as Remicade, the drug that had been relieving her arthritis pain for 14 years. Ms. Rasokas, now 66, didn't hesitate: "I trust her," she said of Dr. Pope. "I knew she wouldn't lead me astray."

Dr. Pope, the chief of rheumatology at St. Joseph's Health Care in London, says her clinical group decided long ago to refuse infusion fees from drug companies. She doesn't enroll her patients in pharma-sponsored support programs, either, unless they need help paying for their drugs.

For that reason, Ms. Rasokas's transition to Inflectra was seamless. Dr. Pope's own staff kept booking her infusion appointments at the St. Joseph's outpatient clinic, just as they always had. Three years later, she's still doing well on the biosimilar.

Ms. Rasokas's switching experience is a lot like what happens in much of Europe, where public health-care systems, not drug companies, co-ordinate and provide infusions of biologics inside hospitals. Unlike Canada, those countries have national pharmacare.

Earlier this year, the federal government launched the Advisory Council on the Implementation of National Pharmacare, tapping former Ontario health minister Eric Hoskins to lead it. Currently crisscrossing the country in search of feedback, the council is scheduled to produce a final report next spring, six months before Canadians vote in an election that may be defined, in no small part, by competing visions of prescription drug coverage.

In an age when biosimilars hold out the hope of huge savings to governments, insurers and patients, the council's timing is certainly apt. Merck has just launched a second biosimilar of Remicade here. Canada pays the third-highest drug prices among the countries in the Organization for Economic Co-operation and Development, and spends more per capita on prescriptions than any country except the United States and Switzerland.

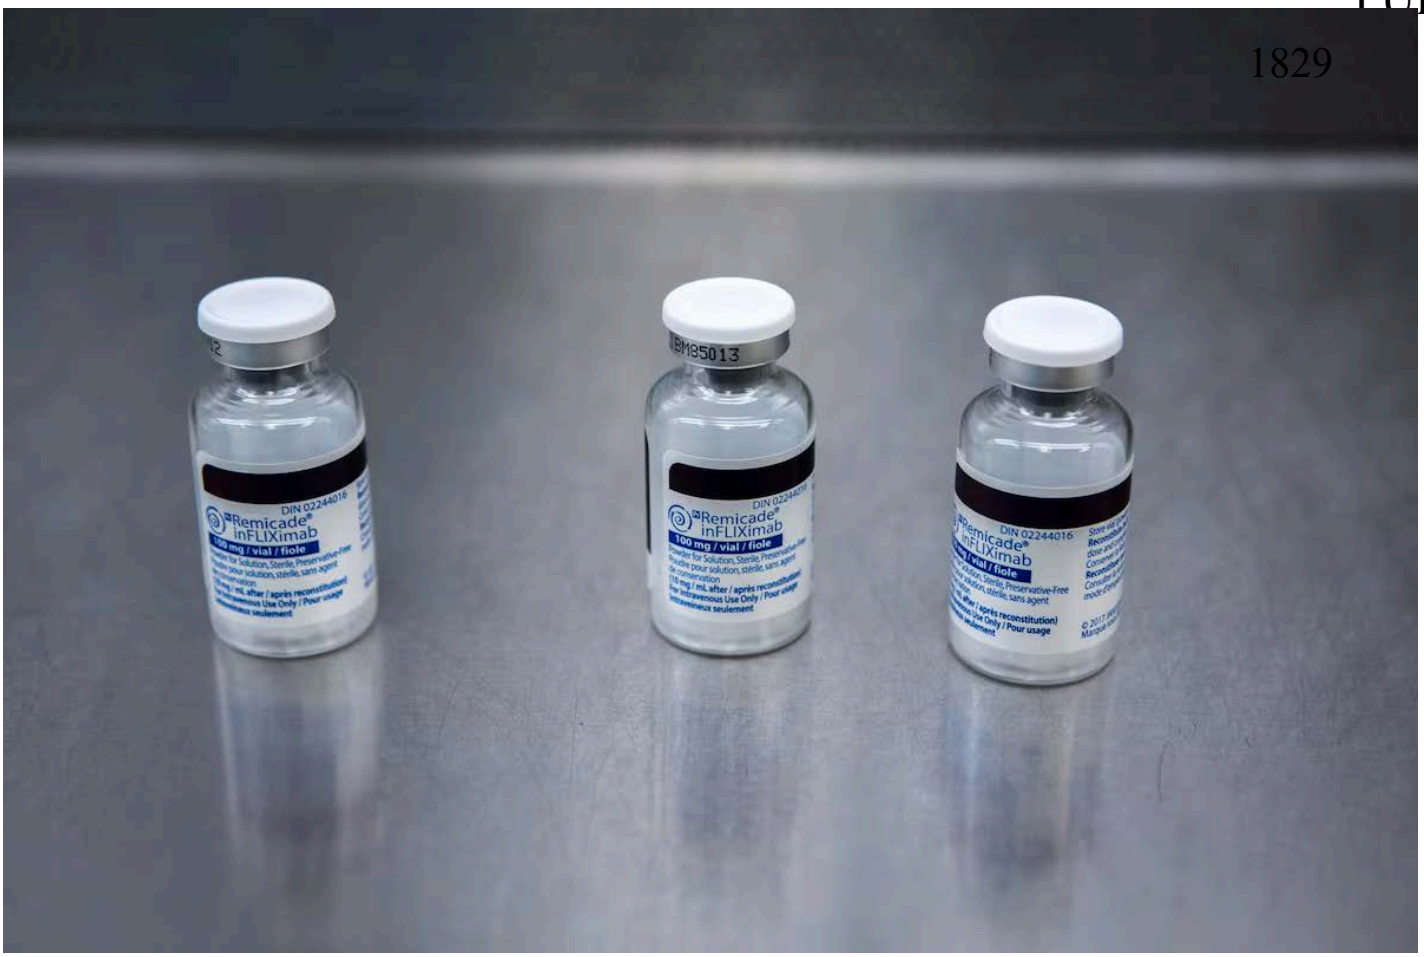
Canada's drug-pricing regulator predicts the biosimilar versions of Remicade alone could save the system anywhere from $91-million to $514-million every single year – but not if the near-copies can't get a toehold here.

Indeed, Janssen has managed, with its suite of tactics, to block biosimilar Inflectra from the market almost completely: Of every $100 of infliximab that is sold in Canada today, $97 of it is still sold as Remicade. By contrast, several European countries with single-payer pharmacare systems have already cajoled or forced the majority of patients to switch to a biosimilar, saving immense amounts of money.

More than 90 per cent of the infliximab sold in each of Poland, Norway and Finland is a biosimilar. In Britain, it's 80 per cent. In Sweden, it's 70. The OECD average is 35 per cent. In Canada, only 2.7 per cent of the infliximab sold in 2017 was a biosimilar.

Like generic drugs before them, biosimilars could free up money for governments and private insurers to cover the newest generation of miracle cures, including expensive gene therapies, said Michael Guirguis, a drug stewardship pharmacist with Alberta Health Services, the agency that runs front-line health care in Alberta.

Although he spoke for himself, not AHS, he is worried about what will happen if Canada misses the boat on money-saving biosimilars. "This is a once-in-a-generation opportunity for health care in Canada."



CHRIS DONOVAN/THE GLOBE AND MAIL

A note on data and sources

The Globe obtained the figures for these graphics from IQVIA (formerly Quintiles IMS and IMS Brogan), an international prescription-drug tracking company; provincial and territorial health ministries; and the Patented Medicine Prices Review Board (PMPRB), Canada's drug-pricing regulator. IQVIA's figures and the spending figures provided by most of the provinces and territories are based on list prices, which do not reflect confidential discounts or rebates that pharmaceutical companies sometimes provide to big payers. None of the parties to those deals is willing to make the real prices public. Janssen disputes some of the PMPRB's figures; the agency stands by its work. You can read Janssen's letters of complaint to the PMPRB here and here and the PMPRB's replies here and here. You can also read the PMPRB's original report on biologic response modifier agents and an updated version.

(Return to top)

The backstory

The Globe and Mail's investigation of Remicade began with a dry report from a government agency most Canadians have never heard of. The Patented Medicine Prices Review Board sets ceiling prices for brand-name prescription drugs and reports on trends in pharmaceutical prices and spending.

In the fall of 2016, the agency published a study about how Canadians used expensive biologic drugs for autoimmune diseases such as rheumatoid arthritis and Crohn's disease.

One fact jumped out at Globe health reporter Kelly Grant: The market share of a drug called Remicade was 40 per cent in Canada, nearly twice as high as the share in any of the other well-off countries against which Canada benchmarks its drug prices. At $27,289 a year, on average, Remicade costs significantly more than any of the other brand-name biologics that treat the same diseases. On top of that, Remicade is delivered as a two-hour IV infusion every eight weeks, while most of the competing drugs come as pre-filled syringes that patients can inject at home.

So why was Canada using so much of what appeared to be the most expensive and least convenient treatment?

In a bid to answer that question, Ms. Grant began talking to drug-industry insiders, pharmaceutical policy researchers and doctors about how Remicade is provided and promoted in Canada. She learned quickly that much of the information she needed – including the real prices of drugs, after increasingly common confidential discounts are factored in – was subject to non-disclosure agreements with pharmaceutical companies. Even the report that first caught Ms. Grant's attention was based on what are called "list" prices that don't reflect those rebates. (That is one of the reasons that Janssen, the company that makes Remicade, disputes the agency's figures, and calls its report misleading. The Patented Medicine Prices Review Board stands behind its work.)

To cite one example, when Ms. Grant heard from her sources that Janssen had decided to give away vials of the drug to hospitals for a penny, she started calling hospitals to find out whether it was true. Of the 38 hospitals, regional health authorities and provincial health ministries she called, all but five said the pricing was confidential. When The Globe sent Freedom of Information Act requests to three hospitals – Sunnybrook, St. Michael's and Mount Sinai, all in Toronto – seeking a copy of the offer, Janssen appealed the release of the documents. Ultimately, The Globe obtained a copy of the offer. Janssen later confirmed the one-cent offer had been made to every hospital in the country.

Janssen's hospital pricing strategy was, however, only a tiny part of the bigger story. As Ms. Grant gathered more information from Freedom of Information requests to nine provinces, Health Canada and other hospitals, she learned that, oftentimes, even government officials don't understand how Canada's Byzantine system for paying for and delivering complex, infused biologics like Remicade actually works.

But smart drug companies do, and that allows them to take advantage of the gaps in Canada's health-care system. Figuring out how to close those gaps is now the job of a national advisory council on pharmacare, which is expected to present its recommendations to Canadians this spring.

Inquiry into alleged anti-competitive conduct by Janssen

Position Statement

See the news release that corresponds to this position statement.

OTTAWA, February 20, 2019—Today, the Interim Commissioner of Competition announced that he has discontinued an inquiry into allegations that Janssen Inc. (**Janssen**), a subsidiary of Johnson & Johnson, has engaged in conduct contrary to the abuse of dominance provisions of the *Competition Act* (**Act**). The Competition Bureau's inquiry considered whether Janssen's alleged conduct inhibited the entry or expansion of biosimilar products in Canada that compete with Janssen's biologic product Remicade (active ingredient "infliximab").

This statement summarizes the Bureau's inquiry and the reasons for its discontinuance. It also identifies and provides guidance on some of the competition issues relevant to biologic and biosimilar pharmaceutical products.

In brief, the Bureau's inquiry confirmed that Janssen has engaged in, and continues to engage in, conduct that could raise concerns under the Act in certain circumstances. However, the Bureau did not find adequate evidence at this time that this conduct was likely to substantially lessen or prevent competition. Since Janssen's conduct remains ongoing, the Bureau will continue to monitor the developing biologic and biosimilar industry for potential violations of the Act.

Overview of the biologic and biosimilar industry

Biologic drugs (**biologics**) are a class of pharmaceutical products derived from living organisms, such as a microorganism or animal cell. Biologics tend to be larger, more complex, and more variable than traditional small molecule drugs, which are chemically synthesized.

There has been a significant shift in pharmaceutical sales towards biologics over the last decade. Whereas only one biologic made the list of the ten top-selling patented pharmaceutical products in 2006, biologics accounted for seven products on this list in 2017 representing 42% of patented medicine sales in Canada. [1]

Biologics are one of the fastest growing pharmaceutical product segments in Canada. The high cost of biologics—with treatment costs ranging from thousands to tens of thousands of dollars per year per patient—as well as their continued growth in usage, have contributed to a significant increase in pharmaceutical expenditure.

Biosimilars, a relatively new category of drugs in Canada, have the potential to provide Canadians with the benefits of competition in this growing segment of the economy. A biosimilar is a highly similar version of a brand name biologic already authorized for sale. In order for a biosimilar to be marketed in Canada, it must first obtain approval from Health Canada. To date, Health Canada has approved biosimilars for at least 9 biologics. Biosimilars are generally less costly than original biologics. Canada's public and private insurers stand to potentially realize substantial cost savings by promoting the use of these drugs.

Competitive dynamics between biologics and biosimilars

Competition between branded and generic small molecule drugs generally follows a common pattern. For a period of time, branded products generally benefit from patent and regulatory protection for their innovation. This often allows for high prices and steady volume. However, once patents and other protections expire, generic competition emerges and quickly captures much of the market at a lower price.

This pattern, known as the "patent cliff", has not yet materialized in Canada for biologic and biosimilar pharmaceutical products. Instead, many biologics—especially those that treat chronic conditions—continue to capture most of the market for many months (or even years) following the expiry of their patents. A number of unique features of biologics and biosimilars may explain this trend not typically seen in the traditional branded and generic small molecule industry.

For one, the degree of risk associated with developing a biosimilar is likely to exceed that assumed by firms that produce generic small molecule drugs as their development requires additional time and capital and assuming the risk that the investment may not lead to a marketable discovery. The prolonged development time and substantial financial investment required to develop biosimilars may limit the number of manufacturers willing to enter the market, as well as prevent the entry of smaller manufacturers. Additionally,

with the prolonged time for biosimilar development, there is a risk of new alternative therapies becoming available prior to the biosimilar entering the market. As a result, the potential market for the biosimilar could be significantly smaller by the time of entry.

Features of the regulatory approval process may also contribute to a longer period to bring a biosimilar product to market. In order to approve a biosimilar, Health Canada requires biosimilar manufacturers to demonstrate that there are no clinically meaningful differences in safety and efficacy between the biosimilar and its reference biologic. While generic manufacturers can provide this information through an abbreviated new drug submission, biosimilar manufacturers must submit a new drug submission, which requires more information (including clinical trials) and takes more time to complete and receive approval. Health Canada's different regulatory framework and submission requirements for biosimilars, as compared to its approach with traditional generic small molecule drugs, reflect the increased complexity and variability of biologics and biosimilars.

In addition, biosimilar manufacturers must provide Health Canada with detailed information for each indication they wish to seek for the product. [2] While a generic drug will be interchangeable with an original branded drug for all indications, a biosimilar manufacturer may not request or obtain approval for all of the indications treated by the reference biologic. Where this occurs, the biosimilar will only be able to compete for a subset of the patients served by the reference biologic.

This challenge is compounded by the fact that, at least at present, there is a lack of consensus regarding the implementation of switching policies for biologic and biosimilar drugs, notwithstanding observations by market participants that emerging scientific literature suggests these policies are safe for patients. Although some public and private payors have taken steps to encourage patients that are currently stable on a biologic to switch to a biosimilar, the vast majority have not. This distinguishes biologics and biosimilars from small molecule drugs, which are subject to automatic substitution policies. These policies, which have been implemented by many public and private insurers, encourage pharmacists to dispense generic drugs in place of costlier branded drugs.

Consequently, while it is common for patients to be substituted from a branded to a generic small molecule drug, there is currently limited substitution from a biologic to a biosimilar. As a result, in Canada, competition between biologics and biosimilars generally centres on attracting new patients that have not started on either pharmaceutical product. [3] This group of patients generally represents a small fraction of the total market served by the reference biologic (often between 10-25% of the market in a given year).

A final factor that may help explain why certain biosimilars have achieved limited growth relates to the role of infusion clinics. Certain biologic and biosimilar drugs must be administered via infusion. This has resulted in biologic and biosimilar manufacturers partnering with third parties to develop networks of infusion clinics across the country, sometimes on an exclusive basis. Information from market participants suggests that it can take biosimilar companies a number of months to develop a network of clinics that rivals their competitor's network, thus impeding, at least for a period of time, their ability to compete for patients throughout the country.

The Bureau's inquiry

The biologic at issue in the Bureau's inquiry was Remicade. Remicade was first introduced in Canada in June 2001 and is now Johnson & Johnson's top earning pharmaceutical product, with revenue exceeding $6.3 billion (USD) worldwide in 2017. In Canada, Remicade accounted for around $1 billion in sales in 2017.

In Canada, Remicade is indicated for the treatment of a number of conditions in adult populations, including rheumatoid arthritis, psoriatic arthritis, plaque psoriasis, ankylosing spondylitis, Crohn's disease and ulcerative colitis. Remicade has also obtained Health Canada's approval for a subset of these indications for the paediatric population. There are currently two approved biosimilars of Remicade in Canada: Inflectra (marketed by Pfizer Canada Inc.) and Renflexis (marketed by Merck Canada Inc.). Inflectra is currently approved for all of Remicade's adult indications and Renflexis is currently approved for all Remicade indications (including for the paediatric population).

In 2018, the Bureau commenced an inquiry in response to concerns that Janssen was allegedly engaging in a series of practices to inhibit biosimilar competition to Remicade. In assessing these allegations, the Bureau interviewed key market participants, including pharmaceutical manufacturers, public and private insurers, hospitals, physicians, infusion clinic networks and trade associations, while also gathering relevant records from many of these parties.

The alleged conduct under inquiry included:

- supplying many, if not all, hospitals with Remicade for 1 cent per vial; [4]
- providing free Remicade to patients that are not eligible to receive reimbursement for the drug under a public or private insurance plan;

- entering into contracts with hospitals and public and private insurers that require or induce them to favour Remicade over its biosimilars; and
- entering into exclusive contracts with third-party infusion clinics that prohibit them from infusing biosimilars to Remicade.

The Bureau's inquiry confirmed that Janssen was engaging in many of the alleged practices. In particular, market participants confirmed that Janssen was supplying many hospitals throughout Canada with Remicade for 1 cent per vial, providing free Remicade to a large number of patients without insurance coverage for the drug, and had negotiated exclusivity with certain third-party infusion clinic networks, which prevent them from administering patients with certain other biologic and biosimilar drugs, including biosimilars to Remicade.

On the other hand, the Bureau's review revealed that Janssen does not have contracts with hospitals and public and private insurers that require or induce them to favour Remicade over its biosimilars. Instead, these contracts, which have only been negotiated with certain private and public insurers (i.e., not with hospitals), have resulted in these insurers not implementing policies that would result in biosimilar drugs being reimbursed on more favourable terms than Remicade.

As summarized below, the Bureau's review assessed whether these four sets of practices individually or collectively contravened the restrictive trade practices provisions of the Act, with a focus on the abuse of dominance provisions.

Analysis

Abuse of dominance occurs when a dominant firm or group of firms in a market engages in a practice of anti-competitive acts, with the result that competition has been or is likely to be prevented or lessened substantially. The Bureau's inquiry focused on the last part of the abuse of dominance test—namely, whether Janssen's alleged conduct was likely to substantially prevent or lessen competition in a market. Consistent with recent Bureau guidance [5], the Bureau's analysis in this case assumed that the relevant market was the market for the sale of infliximab products in Canada.

The Bureau assessed the competitive impact of Janssen's conduct through two overarching theories of harm. First, the Bureau assessed whether Janssen's conduct was predatory (i.e., deterred entry or expansion through below-cost pricing). Second, the Bureau assessed

whether Janssen's alleged conduct was exclusionary (i.e., raised the costs of its competitors and thus made them less effective).

On balance, the evidence reviewed by the Bureau during the course of its inquiry did not support either of these theories of harm. In reaching this conclusion, the Bureau was guided by the following findings:

- **Predation theory:** consumers benefit from competitive prices. Low pricing is thus often an indication of vigorous competition unless the pricing is found to be predatory. Predatory pricing occurs when a firm sets prices below cost for long enough to eliminate, discipline or deter entry by a competitor. This involves an expectation that the firm will be able to recoup its losses later, by raising prices again. In this case, the Bureau's review confirmed that Janssen was offering Remicade at a price below cost to certain hospitals and patients. However, the Bureau did not find credible evidence that Janssen's low pricing strategy was sufficiently widespread that it was likely to eliminate, discipline or deter entry by one or more competitors, so as to substantially prevent or lessen competition in the relevant market. In particular, while Janssen's low prices may have shifted demand from biosimilar products to Remicade, the Bureau did not find that the practice was likely to induce competitors to exit the market or otherwise substantially affect competition at this time.
- **Exclusionary theory:** the Bureau did not find credible evidence that absent Janssen's conduct biosimilar firms would have likely competed more vigorously with Janssen on dimensions of competition like price, quality and service. Specifically, the Bureau did not find adequate evidence that Janssen's contracts with private and public insurers resulted in higher costs for infliximab. This is because Janssen negotiated these contracts by offering increasing rebates to public and private insurers following the entry of Inflectra and Renflexis, which significantly reduce Remicade's net price (i.e., list price subtracting discounts and/or rebates). Furthermore, although Janssen's exclusive contracts with third-party infusion clinics may have caused biosimilar firms to incur additional costs in establishing a comparable infusion clinic network, the Bureau did not find adequate evidence that these costs are likely to lessen a biosimilar firm's ability to act as a meaningful competitive constraint to Remicade.

In light of these and other findings, the Bureau has concluded that, at this time, there is insufficient evidence to find that Janssen's conduct has had, is having or is likely to have the effect of substantially lessening or preventing competition in the relevant market.

Continued monitoring by the Bureau

Notwithstanding these conclusions, the Bureau will continue to monitor the evolving biologic and biosimilar industry. Through its monitoring efforts, which will likely involve continued contact with market participants such as public and private insurers, the Bureau will be well positioned to respond quickly to developments that have the potential to disrupt current market dynamics.

An area of particular interest to the Bureau relates to the potential implementation of switching policies by public and private insurers. While many public insurers—and a few private insurers—have taken preliminary steps to encourage the use of biosimilars (e.g., requiring that new patients begin treatment on a biosimilar), they generally have not implemented mandatory switching policies. Such policies, which are similar in concept to the well-accepted automatic substitution rules that govern branded and generic small molecule drugs, encourage patients that are currently stable on a biologic to switch to a biosimilar.

Policies like these have been introduced in other jurisdictions, including certain countries in Europe. The decision to introduce these policies appears to be informed by a growing body of scientific literature that suggests it is safe and effective to switch a patient from a biologic to a biosimilar (and vice versa). Through these policies, other jurisdictions have been able to shift a significant percentage of total volume from a reference biologic to a biosimilar, allowing them to more immediately realize the cost savings of biosimilars.

The Bureau anticipates that public and private insurers in Canada may choose to implement switching policies, or other similar policies that encourage biosimilar uptake (e.g., policies that incentivize physicians to prescribe biosimilars), in the foreseeable future. Given the potential commercial impact of these policies on companies that sell reference biologics, the Bureau will monitor how these companies respond to the implementation of these policies, keeping an eye out for conduct that may seek to undermine their effectiveness. Such conduct could include spreading false or misleading information about the safety and efficacy of biosimilars with physicians, patients, patient advocacy groups and public and private insurers.

The Bureau's monitoring efforts will also help to identify other types of conduct by companies that sell reference biologics that could raise concerns under the Act. This includes conduct that has recently been reported in other jurisdictions, such as:

1. agreements with insurers (public or private) that prohibit them from providing reimbursement for biosimilars, or that only allow for reimbursement if a patient has first failed treatment on the reference biologic;
2. providing loyalty-inducing rebates based on volume that make it cost prohibitive for insurers to switch a portion of their insureds from a biologic to a biosimilar; and
3. refusing to supply drug samples required by biosimilar companies to perform comparative testing.

Conclusion

The Commissioner has elected to discontinue his inquiry because there is insufficient evidence to conclude that Janssen's alleged conduct has, at this time, substantially lessened or prevented competition in a relevant market. The Commissioner will, however, continue to monitor the Canadian biologic and biosimilar industry with a view to identifying and assessing the impact of key market developments.

The Commissioner's enforcement decisions are based on the available evidence. Should new and compelling evidence come to light of harm in the Canadian marketplace, the Bureau will not hesitate to take appropriate action.

The Competition Bureau, as an independent law enforcement agency, ensures that Canadian businesses and consumers prosper in a competitive and innovative marketplace.

Footnotes

1 See Patented Medicine Prices Review Board, Annual Report 2017.

2 An indication is the use of a drug to treat a disease or medical condition. Clinical data may not be required for each indication requested where Health Canada is satisfied that there has been a rigorous demonstration of similarity between the biosimilar and its reference biologic. See Health Canada's Factsheet on Biosimilars.

3 This pattern of competition arises especially in situations where the biologic and biosimilar pharmaceutical products at issue treat chronic, rather than acute, conditions.

4 In this context, a vial is simply a vessel or bottle that is used to store medication. The number of vials of Remicade required for an infusion will vary according to a patient's body weight and stage of disease progression.

Completion of Preliminary Investigation into Relabelled Biologic drugs

Position Statement

See the news release that corresponds to this position statement.

June 27, 2022 – Gatineau (Québec) — Promoting and protecting competition and innovation in the Canadian health care sector is a key priority for the Competition Bureau. As such, the Bureau is committed to providing guidance to the pharmaceutical industry on practices that may be of concern under the *Competition Act* (the Act).

Biologic drugs (biologics) are a type of pharmaceutical product derived from living organisms. There are two types of biologics:

- Originators, produced by the manufacturer who first developed and commercialized the drug; and
- Biosimilars, which are highly similar versions of an originator biologic generally offered at a lower price.

The Bureau recently closed a preliminary investigation into the introduction of certain secondary brand name originator biologics in Canada (referred to as relabelled biologics). The Bureau examined their potential for anticompetitive harm under the abuse of dominance provisions of the Act.

Information gathered suggests that, in some cases, introducing these drugs could harm competition by making it less likely that patients will switch away from the originator drug. In this way, introducing relabelled biologics may reduce incentives for pharmaceutical companies to develop and market biosimilars.

This preliminary investigation follows an earlier investigation into alleged anti-competitive conduct relating to biologics. The Bureau will be particularly concerned about the introduction of relabelled biologics if they are accompanied by other practices that may raise barriers to entry and expansion for biosimilars.

The Bureau closed its investigation because the drugs under review have not been marketed in Canada. In the event that a relabelled biologic is marketed in Canada and there is compelling evidence of harm to competition, the Bureau will investigate the conduct of the originator manufacturer and take appropriate action.

On this page:

Background

Biologic drugs are derived from living organisms, such as a microorganism or animal cell. They tend to be larger, more complex and variable than traditional small molecule drugs, which are chemically synthesized. A biosimilar is a highly similar version of a brand name biologic already authorized for sale. Biosimilars must first obtain approval from Health Canada to be marketed in Canada and are generally priced lower than originators. Therefore, Canada's public and private insurers may realize cost savings by promoting the use of these drugs.

An important difference between biosimilars and small molecule generic drugs is that biosimilars are not deemed bioequivalent to the originator biologic. Accordingly, biosimilars do not benefit from some of the same policies that encourage the uptake of generic small molecule drugs, like provincial interchangeability designations.

Certain biologics are given to patients intravenously, requiring more assistance than with many small molecule drugs. This has resulted in manufacturers developing patient support programs where their products are dispensed at infusion clinics. Originator and biosimilar manufacturers may partner with third parties to develop networks of infusion clinics across the country, sometimes on an exclusive basis. As a result, switching from an originator to a biosimilar may require patients to switch support programs and clinics.

To promote the use of biosimilars, many provinces and territories have introduced, or are in the process of introducing, mandatory switching policies for patients who qualify for public reimbursement. While the details of these policies will vary among jurisdictions, they generally only cover biosimilars. With exceptions, patients must switch to a biosimilar to receive reimbursement from the provincial plan. Other policies may not cover originators

for new patients where a biosimilar is available. Although private insurance companies can still provide coverage for originators, it is the Bureau's understanding that some of them also promote the use of biosimilars to reduce the cost of their plans.

Following the introduction of these policies some manufacturers have sought approval to market their originator under a second brand name. These relabelled biologics are therefore the same product as their respective originator, and only require an administrative relabelling approval from Health Canada. Relabelled biologics may be priced similarly to biosimilars, and therefore may be more attractive for public and private payors than the originator. Pharmaceutical companies might prefer to introduce a relabelled biologic at a lower price rather than reduce the price of the originator. This can be done for various commercial reasons, such as avoiding international price comparisons that could result in a decrease in the price of the originator in other jurisdictions.

The abuse of dominance provisions

The Bureau considered the introduction of relabelled biologics under the abuse of dominance provisions (sections 78 and 79) of the Act. An abuse of dominance can occur when:

- The firm being investigated is dominant, meaning it has a substantial degree of market power – the ability to set prices above competitive levels or reduce other factors, such as product quality, below competitive levels.
- The dominant firm has engaged in a practice of anti-competitive acts that is intended to have a negative predatory, exclusionary, or disciplinary impact on a competitor.
- The dominant firm's anti competitive practices have substantially reduced the overall level of competition in a market or are likely to do so.

Where these conditions are met, the Bureau can seek an order from the Competition Tribunal for various kinds of corrective measures and administrative monetary penalties.

Competition issues

Because the relabelled biologics under investigation had not been marketed, the Bureau closed its investigation. However, the investigation suggested that if relabelled biologics were to be marketed and covered by public and private payors as an option for patients, they may harm competition in certain circumstances. In markets where patients remain

stable on a medication for a significant duration and have non-medical preferences for staying with an originator, the existence of a relabelled biologic may exclude an important patient base that would otherwise switch to biosimilars.

In some cases, patient support programs may contribute to these preferences. As highlighted above, where biologics are infused intravenously, switching patient support programs may require patients to go to a different infusion clinic. This sort of dynamic may provide significant advantages to a brand manufacturer simply due to the patient having taken an originator historically, rather than due to the quality of the product or service.

If originator biologics were able to leverage these dynamics to transfer their customer base over to the relabelled version, there may be little market for biosimilars to compete for. This could reduce incentives for biosimilars to enter, or expand in the market, and reduce competition. Even where relabelled biologics have similar prices to biosimilars, this may only be because of the threat of biosimilar competition. If biosimilar competition is excluded or deterred, the manufacturer of an originator may be able to maintain prices above competitive levels.

The Bureau expects that a key contextual factor in any future investigation will be how relabelled biologics are reimbursed by public and private payors. The Bureau expects transferring a customer base to a relabelled biologic would be substantially more difficult in the absence of reimbursement. Public and private payors may appear to have incentives to reimburse relabelled biologics, such as where they are priced lower than their originator. However, there would be a greater probability for the harms described above to occur if relabelled biologics qualify for equivalent reimbursement to biosimilars.

The Bureau believes that the presence of other potentially anti-competitive conduct may significantly increase the likelihood of competitive harm from relabelled biologics, aligning to form a practice of anti-competitive acts. For example, the Bureau's inquiry into the conduct of Janssen Inc. determined that manufacturers of originators may at times provide free medication to hospitals and patients. Such conduct may induce consumers to start or remain on an originator and, if coupled with the introduction of a relabelled biologic, may anti-competitively shield the brand manufacturer from biosimilar competition. Alternatively, if the relabelled biologic is marketed below an appropriate measure of its cost of production, this could undercut competitors in a predatory manner and increase the harm from the introduction of the relabelled biologic. In future investigations, the

Bureau will consider whether the introduction of a relabelled biologic, accompanied by other potentially anti-competitive conduct, has the cumulative effect of causing a substantial prevention or lessening of competition.

While the Bureau's analysis is focused on the potential competitive concerns that may be raised by relabelled biologics, there may be situations where the marketing of a relabelled biologic does not raise concerns under the Act, for example where it does not cause a substantial lessening or prevention of competition.

This guidance is being provided in the specific context of biologic drugs, where particular market dynamics, regulatory systems and experience in previous investigations informed the Bureau's decision to investigate relabelled biologics. In most cases, an incumbent manufacturer launching a new brand or product line following the entry of competitors does not raise issues under the abuse of dominance provisions [1].

Conclusion

The Bureau remains very mindful of the importance of competition in the pharmaceutical industry given the significant existing barriers to entry stemming from patent protection, stringent regulations and development costs.

While relabelled biologics have yet to be marketed in Canada, the Bureau is of the view that manufacturers engaging in the type of conduct described in this statement has the potential to contravene the abuse of dominance provisions of the Act – particularly if accompanied by other potentially anti-competitive conduct.

In the event that a relabelled biologic is marketed in Canada and there is compelling evidence of harm to competition, the Bureau will investigate the conduct of the originator manufacturer and take appropriate action.

This publication is not a legal document. The Bureau's findings, as reflected in this Position Statement, are not findings of fact or law that have been tested before a tribunal or court. Further, the contents of this Position Statement do not indicate findings of unlawful conduct by any party.

However, in an effort to further enhance its communication and transparency with stakeholders, the Bureau may publicly communicate the results of certain investigations, inquiries and merger reviews by way of a Position Statement. In the case of a merger review, Position Statements briefly describe the Bureau's analysis of a

particular proposed transaction and summarize its main findings. The Bureau also publishes Position Statements summarizing the results of certain investigations, inquiries and reviews conducted under the *Competition Act*. Readers should exercise caution in interpreting the Bureau's assessment. Enforcement decisions are made on a case-by-case basis and the conclusions discussed in the Position Statement are specific to the present matter and are not binding on the Commissioner of Competition.
